another crappy radio with no real RF improvements. Poor transmitter 3rd order IMD, poor receiver 3rd order intercept point, poor noise floor, noisy receiver, DSP that does nothing except notch tuner uppers, hiss out of the audio PA, and typically from Icom IMD problems on receive, they will probably have that same crappy electret microphone, etc etc etc etc,. Anyway this comment applies to the other manufacturers as well. When will we get a radio with -40db transmitter 3rd order, +30dbm third intercept point, a preselector in place of the useless antenna tuners, this would be a great start. No wonder they cant sell these radios, anbody with 2 cents of intelligence knows in real terms the performance difference between a old Drake C line or Collins S line is so small its not worth talking about. Its a great whats new post, but boring as hell.

Add shipping, then UK import duty, 4%. UK VAT (payable on private deals too) 17.5%.
You can not declare the rig, avoiding duty and tax, but it is illegal.

I don't see why we should pay duty and VAT on private transactions, but we still have to.

1716. Kenwood TM-D700A Notes

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-13 00:00:00 UTC
From: Sean Baxter <NOSPAMsbaxter@gte.net>
Message-ID: <QUlf4.906$bQ1.5372@dfiatx1-snr1.gtei.net>
Source record: 88731

A few notes on the new Kenwood VHF/UHF Packet radio.

I have had the radio for about a week now. I have yet to find any problems with it, all functions I have used work as advertised. I use only the voice and APRS functions. I did not try any SSTV or connect directly to the internal TNC via serial PC connection. You can even connect an external TNC that can be controlled by a serial connection to a PC.

First, the new amber display is a big improvement over Kenwood's V7 blue screen. You can easily read this display in direct sunlight! Kenwood also brought back the sub-band Mute function (was on the 733A radio) which they removed from the V7 radio (which I really missed). The DX cluster function works. On the screen you can see up to 5 postings with the ability to "page" and see comments of the DX post. You can also page station postings per screen (5 postings per screen). The DX cluster function is a receive only function, it also removes duplicate postings for a particular DX post.

It is very cool to have the radio on 144.390 Mhz APRSing away and the sub-band can also be on 2m repeater. When the APRS side transmits it only blanks out the sub-band (only if you are on 2m) for a second. If the sub-band is on the 440 Mhz side you do not know the 2m side is transmitting.

I use a Garmin GPS III+ that has NEMA input/output which allows me to see the station call signs of APRS stations on its map (up to 6 characters). I use an external antenna (for the GPS) that is stuck in the far right-hand corner of the dashboard and it receives the GPS signals very well. You need only one external dual band antenna and you are ready to go. D700 has only one antenna connection for VHF/UHF.

The look and feel of the radio is nice. The rubber type buttons have a good feel, larger VFO knob make for easy function changes.

Looks like Kenwood has done their homework on this radio. No complaints so far but I wish it improved on the following:
1) Only 40 station list in APRS listings. In the Philadelphia area that list will scroll out in about 15 minutes - need at least 100 station list.
2) Only can view up to 64 characters in an APRS message. Need to be able to page to a second 64 characters message display.
3) Kenwood should have made an internal GPS unit an add-on option. This would make getting on APRS for a new comer a snap...connect external GPS antenna and away you go.

Sean - K3XT

The offset is 100 khz not 1 khz. 29.620mhz is equal to 29, 620,000 hz, so the difference between 28,620,000 hz and 29, 520,000 hz is 100, 000 hz or 100khz.

The Technician is by definition, an entrance level exam, and has been for 10 years. The General and Extra are more than entrance obviously, since they require more knowledge to pass. However, they are entry levels to their enhanced privileges. In no sense are they graduation certificates, or proof that someone has achieved something great in technology development. Amateur radio never was meant to be a college degree. The only applicability of an amateur radio license to the commercial world that I know of is that an Extra will get you a *Third* class NARTE Technician certificate.

Sheesh!

Sorry, folks. For some reason that message was "hung up" (technical jargon) in my outbox. The status line would show "Done. Waiting on confirmation." When that timed out the message would remain in the outbox to try again.

I think my news provider may have the flu or something.

Again, sorry about the extra messages.

1733. Restructuring Blues.

I've read a lot from folks who are very unhappy about the license restructuring of amateur radio. Everyone should take a look at posts on the newsgroup rec.radio.cb. They are all very happy there about the restructuring. With good reason I should say. Well...maybe this will cheer you up a little and maybe not. I just got a kick out the sheer stupidity of it. Future ham perhaps????
the post is titled "Bad smell from radio" and I have pasted the contents as written by the author...enjoy!!??!!

>>For the first time ever I decided to throw a dead carrier. Turned up my Saturn turbo wattage and locked the D104. I took a shower and came back about a half hour later and my room stunk!!
Radio still puts out full power and it took an ice pack to cool the heat sink off. I had fun, so I thought Id share that with you all.<<

1734. MT1000 Low-Band to 6m??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-13 00:00:00 UTC
From: Steve <skoone@netscape.net>
Message-ID: <sm7q7sgfgss6b7hioj0kgfo2uec4jbb4m9@4ax.com>
Source record: 88823

Hi guys..

I posted the earlier message about programming an MT1000 above 52 mhz.

Well, I went to batlabs.com as was told and got the scoop on that one. I sucessfully programmed above 52mhz. Now the darned vco or pll acts like it's wanting to unlock. The radio works great at 52.525, but if I program much above 52.525 the radio acts like it just shuts down until I change to a lower frequency.

So I guess I'm back to asking you guys again. For those who have been able to get your MT's go to above * 53 * mhz, how'd you do it???? Are further modifications required?

Or am I just SOL with the MT1000 I've got (ie an unfortunate, very tight, cutoff PLL)??? This "Frequency Generator Module/VCO/PLL/ Synthesizer" that sits in the bottom of the radio looks very unmodifiable!

I have scoured the 'net with practically no luck for help except here!

Many thanks for your input,
Steve KA4YMY

>I found that the offset is adjustable from 0-990 Khz. Since the FM
>repeater offset on 10 meters is 1 MegaHertz, it kind of makes this
>unit unusable on the 10 meter repeaters.

The FM split on 10m is 1 KHz, not 1MHz. For example, a repeater with an output on 29.620MHz will have its input on 29.520MHz.

I am suggesting that morse code is another language in itself, and
learning a language is harder than improving the language skills!
The post was to explain that The restructuring
isn't changing the difficulty level of passing 5wpm.
In other words, Passing 5wpm is harder to pass than 13/20 wpm.
Therefore I must ask you, Did that answer your question or was I not
reading your question right?

I dare say it was and "ordeal" because the person taking the exam made
it one, not the FCC examiner. Only natural to be nervous about the test,
especially when you have driven 200 mile to get to the FCC office. You
certainly hoped to pass so you did not have to make the trip again.

> --
> 73, Cecil, W6RCA http://www.mindspring.com/~w6rca

I think there's widespread confusion between the ticket (and associated
callsign) and the hard work it may have taken to earn it. It's the FCC's
job to make sure you meet some *minimum* requirements they've set up
to get on the air, and it should be the ARRL's job to recognize and award
outstanding hams
for their achievements.

It should be up to the ARRL and not the FCC to develop awards for
hams for proving you're achieved some noteworthy accomplishment.
For example, they should have awards (if they don't already) for
finishing (say) 50 QSOs at 10, 13, 15, 20, 25, 30... WPM, presumably
without a QLF. :) There are already awards where you can nominate
exceptionally
good operators, and presumably public service awards would work the same
way.
I see no reason why you can't brag about a 30WPM award the same way as you
would a DXCC or your 2x1 callsign. Am I totally all wet on this?

The bottom line is the FCC doesn't care how hard you worked,
nor are they interested in certifying your skills to other hams or
impressing your buddies with your high-class callsign.
They just want to be sure you pass muster. They issue the
ticket as a permit to allow you on the air, plain
and simple. You meet some minimum standard, and you're in just the
same as the guy who got every question right and 100% copy on the
code test. (This "Pass/Fail" phenomenon at the DMV explains a lot about
what
passes for driving in Calfornia, but that's a whole other digression.) ;)

If the ARRL was so eager to nurture and protect the Code, they ought to get
off their
collective butts and find ways to recognize hams who DO use the code. The
FCC
doesn't (and shouldn't) care about our internal squabbles.

1745. Need Help Kenwood 732A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-13 00:00:00 UTC
From: "Joe G. Wesley" <risd@flash.net>
Message-ID: <387D52F1.6375FD38@flash.net>
Source record: 88834

I recently bought a Kenwood 732A where the original owner had cut the wire to the remotely installed head. He had lost the short wire. I spliced the wires back together and the radio works fine with two exceptions:

1. The VHF squelch control does not function at all.
2. The display in the UHF indicates the transmitter is transmitting at full power level when it is not transmitting. When you adjust the UHF squelch knob the "power" level decreases until the squelch opens up and the busy light appears.

When I spliced the connecting cable the wires were twisted and there was a good shield. Would the lack of twisting and the lack of shield at the splice be the problem??

Do you have a short connecting cable for the 732A? If so will you sell it. Please contact me at mailto:risd@flash.net

Thanks joe N5RMA

Hey Lee, your reading the wrong stuff. Not all hams are like that, I have 43 plus years in and I chat with who I want and it does not matter what class ticket you have as long as you can chew the fat. You are going to hear a lot more so don't get discouraged. It is hard for some of these folks to let go of the past and face current events

1756. HELP: Need Stoner Pro-10 Manual/Schematics or copies of.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: blueglow <blueglow@mindspring.com>
Message-ID: <85ohrb$135$1@nntp2.atl.mindspring.net>
Source record: 88495
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.cb

I just acquired a Stoner Pro-10 and need a owners manual, service manual, or schematics. Basically anything you may have on a PRO-10 including ads or literature. I do not have to have the original, just a copy for my reference. The original would be nice if you have any to sell.

I will pay for copies or original manuals or information.

Please reply directly to blueglow@mindspring.com.

Thanks,
Mark

You got that one right , out in the Seattle area, there were a lot of
Stoners, in the SSB group that I was involved with about 12 years ago, one
of the group was probably the no. 1 radio fixing man in the northwest at
that time , his attitude of Stoners is that they were boatanchors, neat to
look at , great talking when they worked , I got rid of mine and went to a
142 way back then ,it didn't quit swing as much as the pro 40 but it had a
lot better ears and in all worked a whole lot better, I actually gave my pro
40 away , tired of sticking money into it,73's

Hello, All!

has anyone tested to see if this critter will xmit on 220 with the mod performed? I don't expect that the receiver's sensitivity would be worthwhile, anyway, but maybe it would be useful if you were in the repeater's backyard. It's looks like its a helluva lot smaller that my transverter, anyway!

Thanks!

Bill WA3RA

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot and the current bid is $15.50. I have
seen these go for over a buck a piece at hamfests and over $3.00 each
on the net.

Stock up now!

Don't miss out on this one!

I'm surprised to hear anyone say anything bad about a Stoner. I
had several and not one of them gave me a bit of trouble. I take
that back. I had to clean those interconnect pins on occasion.
I've worked on many a Stoner and overall I think they had a
better rcvr than all of the Cobras' and Presidents as well as the
remainder of the makes I didn't mention.
I found them to have a quieter rcvr and good fidelity. I would
even say as good as most any Ham radio at the time.
I realize that any radio can have trouble but these seemed to
have a long MTBF. I only had to work on the ones that were hosed up
by the unknowing or just tweaked them to get back to normal specs.

Yup, batteries were fresh. I even tried with the cigarette lighter adapter on one radio and the other plugged into the wall. I suspected the antenna... I took both antennas off the radios and tried it that way. (I thought the antennas might not have been getting good connections.) I got about 50 feet without any antenna. I'll bet you are right.

Do I have any options with handheld antennas? What about magnetic mount antennas with a bnc connector? Are they available?

Thanks.

> operated rig, but not critical.

There aren't that many new HF transceivers available today that run directly off of 120V AC. Most run off of 12V DC and you need a power supply capable of 20A or so. Some manufacturers make 'matching' power supplies, but the 'matching' is only in the sense of the cabinet matching the radio. There really aren't any features that are specific to a particular radio. If you purchase a good 12 V power supply it will probably last you through many different radios. I still use the first power supply that I bought when I first got on the air though the original transceiver is long gone. So I wouldn't be too concerned about a AC powered rig.

That said, I know of only a couple current production transceivers that run directly off of AC, the Yaesu FT-1000MP and the Kenwood TS-950. A new FT-1000MP will cost about $2800 and a new TS-950 about $4000.

This brings up another point. You didn't say how much you wanted to spend. Most transceivers today put out about 100 watts. New transceivers range in price from about $700 up to $4,000 or more. There seem to be established 'price points' at around $700 - $1100 and $1800 - $2200. Many manufacturers will have radios in those price ranges. You usually get more if you pay more, but there is a still a lot to be gotten at the low end of the price range. When budgeting for a radio, remember to include the cost of the power supply (around $100) and an antenna. You may want to consider your antenna options first. A $700 radio with a good antenna will outperform a $4,000 radio with a mediocre antenna.

For someone just starting out, you may want to consider a used radio. If they are taken care of they can last 10 or more years, and you can save some bucks. If you find out that you don't really enjoy the hobby, or that you really want a different radio, you can resell a used radio for almost all of what you paid for it. One of the nice things about ham radio is that you'll be talking to hams on the air who are using all different radios and you'll be able to get a feel for what those other models can do. Chances are you'll want to change your initial radio selection.

When buying a used radio, it is, of course, 'buyer beware,' but for the most part folks selling the used radios are pretty honest. Some of the dealers will give you a short trial period during which you can return the radio if

it doesn't work as expected. You'll just be on the hook for shipping charges.

I currently have an Icom IC-756 and I would recommend it. They are currently selling new for about $2000, but Icom just released a newer model (the IC-756 Pro) which is replacing it. That should lower the price on closeout (but probably not more than $100 or so). Everything on the radio works well and the user interface is well thought out and easier to use than on other radios I've tried. From the pre-release hype, the IC-756 Pro sounds like it will be even better, but the price is up to $2850.

Let us know how much you want to spend and if you are willing to consider used radios.

73,
Mark, N8ME

Dick,

I think you're downplaying your own abilities and attaching too
much importance to the license. Sure, the license, especially in
the past, was a 'flag' indicator of certain abilities, but that hasn't
been true for years. I think the status of a HAM license as a
flag of technical competance went out the window in the 60's,
when consumer technology moved away from 'hand wired chassis'
and tube technology. Not that HAMs changed any at that time,
but the public perception of 'high tech'. And over the years it's
further changed.

Mike

I very much doubt if Hamradio is nearing it's end. I personally have loads of fun building stuff even though I rarely operate, and this is what "HamRadio" is to me. I don't give a stuff what others think or how much bitching there is, I will just continue my hobby regardless. Remember that once upon a time, even the old-timers were newbies!

I love to get on the HF-bands occasionally and chew the fat but I detest contest weekends when the bands are crowded out with number-swapping, but then again we can all bitch about something. At contest weekends I just switch on the soldering iron the whole weekend and have some different fun with homebrew. As regards homebrew, take a look at http://sm0vpo.8m.com and you will see what I mean.

Hi Lee,

Like the Nike commercial says: just do it. Most of the views I see on the newsgroups tend to be a bit radical. When I first started reading this stuff I wondered the same thing a while back. But in reality most hams I found to be very helpful and friendly. Yes there were the ones that acted rude, but they were way less then the ones that welcomed me to the hobby. I still remember one guy in Washington on 10m who came right in on a DX contact I was making and started calling his friend in New Jersey. When I politely told him the frequency was in use he said that he could do what he wanted and how every 'CB plusser' on 10m was worthless and the old "I've been a radio operator for 200 years, blah blah." When I asked him if that was case then why he was there he said, "because thats the only license me friend has." Good to know he thinks of his friend as 'worthless.'

I used that guy as the perfect example of exactly how NOT to act on the air.

Point being, dont be intimidated by what you read on the newsgroups. Your operating skills and attitude towards others will dictate how others will treat you and remember - at first you can learn a lot more by listening then talking.

1784. Re: SGC antenna tuners - reliable?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <CuHf4.8679$iZ1.424890@newsread2.prod.itd.earthlink.net>
Source record: 88561

I've been using an SG-230 for about two years now with various wire antennas. The unit had to be returned to SGC three times and one other time to AES for service. The trip to AES was to resolve a problem with the receive preamp which would not function. Turns out that the documentation was just horrible in that area and the preamp really did work. It was just guess-work as to which of the control wires controlled the preamp. By the way, the preamp is probably very useful with short mobile antennas, but does nothing but overload severely with more than a few feet of antenna attached.

Haven't had a problem with the SGC for quite a while now, since I installed switching to disconnect the antenna during thunderstorm periods. Apparently there is little or no internal protection from static discharges and the CPU is easily damaged by same.

Hopefully, the SGC service department has improved since my initial experiences with them. When I had the original problem of a non-functioning preamp, I talked with them at length on the telephone and they asked me to return the unit to them for service. Weeks later, I got it back and the paperwork indicated No Trouble Found. I then asked AES (where I purchased the unit) in Milwaukee for their help and sent it to them. Their technician, Miles, immediately figured out what the problem was and explained the wiring requirement to me.

Another time, when the tuner simply quit working, I returned it and the SmartLock Pro unit to AES for service. They had to forward it on to SGC since they really can't service the internals. It was returned to me repaired, but the SmartLock Pro unit was missing. A call to SGC brought no sympathy or action. AES again got involved and obtained a new SmartLock for me. From all this, I conclude that you could have real problems if you don't have an organization like AES helping you out with SGC. AES Milwaukee is great to work with and really goes out of the way to make sure the customer is satisfied.

I'm currently using the SG-230 to feed a 40 meter delta loop on 160 through 10 meters. The 230 is mounted in a garden shed in the back yard and one of the lower loop corners is attached to the shed wall, with the wires entering through small holes and attaching to the 230 (you really can't attach a feedline to the 230, and the 230 is not able to withstand the rigors of strong sunlight without some sort of shelter). The loop works surprisingly well, even on 160 meters. Not nearly as well as a good 160 antenna, but I could work everything I heard in the recent 160 contest. I use a Yaesu FT-900 with this antenna, and I can switch bands in just seconds. When I punch the tuner button on the 900, the SGC also responds and in most cases the tuning sequence is complete in a couple of seconds. Initial tuning on 160 takes quite a bit longer with this very small loop antenna.

I have heard of others who have had problems with their SGC's, but mine seems to work very well.

What kind of problems have you had? I find that the control circuit is very sensitive to stray RF, but that extending the control cables with shielded cable (I used pro-quality mike cable w/ cannon xlr connectors) fixed that problem.

On rare occasions, the tuner won't sense a mismatch when switching bands, but hitting the reset switch on my controller fixes that. There is a schematic available for the SGC controller, or if you'd like, I could send you a schematic and photo of the controller that I built for mine.

I just did. FT-100 for $1079. They don't list the ATAS-100, but the cheapest I've seen anywhere is $299, for a total of $1378. Looks like $128 more at East Coast unless I screwed up my math.

From: nfivein@my-deja.com
Message-ID: <85ns1h$aj1$1@nnrp1.deja.com>
Source record: 88570

As a result of my earlier post inviting you to connect to the New Internet PacketCluster at KC0DJO in Duluth I have received several direct e-mails asking what software was required, how to 'do' telnet etc. So here is an explanation:

First you must be connected to your ISP!

If you are running Windows 95 or 98 you already have the needed telnet software. Simply open a DOS window as follows:

Click on Start
Click on Programs
Click on MS-DOS Prompt

In response to the prompt type telnet. It will look like:

C:\WINDOWS>telnet

This will generate a telnet window.

First click on Terminal then Preferences and put a 'check-mark' in the box for 'Local Echo' then click on OK. This is needed so that you can see what you type as AR-Cluster does not echo your commands.

Now click on Connect then click on Remote System...
This will open a box where you will put the address 209.32.226.63 in the space following Host Name. The Port should be shown as telnet and the terminal type will be fine as vt100. Now click on Connect.

Now the original information reproduced below should guide you.

Original posting:

You are welcome to connect to a New Internet Accessible PacketCluster at telnet address: 209.32.226.63

This AR-Cluster is located at KC0DJO in Duluth Minnesota and is part of the Midwest PacketCluster System.

I did, with this result:

Radio Operator/Communications Analyst in Quantico, Virginia
USA

Key Role
Provide Morse code and radio operator support for key
government clients.

Qualifications
HS diploma
3-5 years of experience
Experience with voice, FSK, and packet communications
Experience with Morse code at a proficiency of 18-20
groups per minute or Extra Class FCC ARL
Experience with radio theory, Q signs, and radio
equipment

E-mail your resume directly to Mike.

I'd bet they have trouble finding a young ham to take this
job.

Well, I'll tell ya what...

Why don't you try interviewing at HP and tell them that your qualifications
include being able to design a Hartley oscillator from memory and that you
can send and receive 20WPM code proficiently. See how far you go...

1802. Uniden Hr-2600 S meter problem ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: Michael <me_hamman@yahoo.com>
Message-ID: <s7v1m653oj844@corp.supernews.com>
Source record: 88579

Anyone ever experience the S meter peg during RX on the 2510 or 2600?? I have a 2600 that the meter pegs whenever it feels like it. If you apply pressure to the lids the meter behaves itself. I have tried to make the rig do it with the lids off but can't make it repeatable. The rig plays just fine in every other way.

Thanks
Michael

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

FORUM SCHEDULE
10:00 - 10:45 AM

Mint Timewave 599 ZX As new. Original box and manual, etc.

This DSP audio filter is just terrific. I have acquired a second one, and this is the one I'm selling.

Guys, this filter traps heterodynes like a budweiser frog. Zzzzap...fast, no tuning like previous models. Quiet and very effective. EASY to use...just plug it in to your speaker output.

RTTY ops...you've never experienced anything like the ZX's rtty demodulator. Brick walls on either side of your mark and space tones...amazing rtty copy through serious noise.

SSB effective, but reallly effective in digital modes. This is a terrific station accessory, one no digital/cw op can afford to be without.

Read all the tech stuff at www.timwave.com .

Sure, I guess so. The charter which is posted monthly says for these newsgroups it should be radio related. Cell phones converted to 902 Mhz. Amateur Radio band are radio related. Cell phones in themselves are radio transmitters also. That should be explanatory enough, the bozo I responded to was bitching about my post saying it was "anti-scanning", I don't know what drugs he was using when he came up with that one, but they must have really been good. How converted analog cell phones for Amateur Radio is "anti-scanning", I'll never know!

The problem is the larger white plug on the top board right behind the LCD display. I hope that you can find it without my getting any more technical than that. It has been a few years since I've been inside these radios. I experienced the same problem with a HR 2510 that I had once. The only thing that I could do was to unsolder the plug assembly from the board and directly solder the wires to their respective places. I know that it isn't exactly what you may have wanted to hear, but I'm not sure of anyone else having that problem.

I don't think the question pools are available for purchase.
On the other hand, our volunteer examiners probably have a bit of a
collection from all the exams they've run in the past.

I haven't heard of corruption in the VE process here, and we don't
have the medical exemption for Morse either.

1817. IC-735 - turning up the power?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: Nicholas Bluhm <Nicholas.Bluhm@flinders.edu.au>
Message-ID: <85lqterrd1@nnrp1.deja.com>
Source record: 88594

Just wondering what the drawbacks are of turning the power up on the IC-735 via the pot under the hood? OK, it will drain my battery faster. Might run hotter too and shorten the radio's life. I might only get an extra couple of dB out of the radio this way and so will probably never turn it up, BUT I would still like to know of any serious pros and especially cons of doing so (just because I'm bloody-minded). Also, which way do you turn the pot - clockwise or anti-clockwise to turn the power up? I could work it out for myself, but if someone else already knows ... :-) :-).

Cheers,
Nicholas - licensed since Christmas!

Do a web search on International Crystal. They have a nice page on
their web site where you can input all the specifics for the crystal you
need. You can even type in the equipment that you intend to use it on.
Prices are reasonable, especially if you only need one. I recently
bought a nice old 2 meter FM crystal xcvr because two of its crystal
controlled channels matched local repeaters. I was considering adding
more when I found this page.

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

Message-ID: <01bf5e23$26a9ed00$3817f8cc@ppp.neonramp.com>
Source record: 88600

Sir,

You need to review your 10 meter band plans;
The FM portion is 100kHz spacing, not 1 mHz.
The HTX-10 will function just fine as long as the
repeater you are attempting to utilizes tone.
For example: place radios offset to 100, dial up
29.620 on main vfo, have the "-" engaged, and
you should be there.
I will say that the manual leaves alot to be desired.

Robb...N0RU

Not any more! All that's required is the determination to
make the necessary memorizations, and to stay with the
program until it's done. At which time no one will be able
to determine, without some sort of additional testing,
whether the newly licensed Extra has learned anything at
all! Now, the only differentiation among the amateur license
classes is merely "Did you memorize 35, 70 or 120 question
and answer pairs?" Neat!

> However, they are entry
> levels to their enhanced privileges. In no sense are they graduation
> certificates, or proof that someone has achieved something great in
> technology development.

You don't say. I guess that's why all the newcomers come to
the old Extra with all their questions and problems- or once
did. Evidently they hadn't learned that he was just a
beginner, too. What drivel.

> Amateur radio never was meant to be a college
> degree.

For most radio technical people over the term of its
history, a college degree just wasn't in the scheme. Nor did
it need to be. Yeah, we know those of you who came along
later would like to change that. And as far as ham radio is
concerned, you got it done.

> The only applicability of an amateur radio license to the
> commercial world that I know of is that an Extra will get you a *Third*
> class NARTE Technician certificate.
>

Well, Hoop de do! That just shows how much disdain you
"engineers" have for any non-engineer. We just don't count.
Fine, I sure don't need your "Narte" nasty and wouldn't have
it. I had a First Phone that the FCC junked, the same way
they just did to the Extra class ham license. Whatever

little technical prestige Extra had remaining, and after 15 years of Question Pools there sure wasn't much, is now gone to the same junkpile. RIP. It was once upon a time a Very Good Thing. Now it's nothing.

1827. Midland 75-810 and handheld CBs in general

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: Tim Dunfee <tdunfee@zoomnet.net>

I have a pair of Midland 75-810 CBs. Their maximum useful range is from one end of the house to the other. Well, that's a slight exageration, but the max useful range is actually about 100 yards. At about 150 yards the signal strength meter does not even register. Is this typical of handhelds?? I believe Midland's advertised range for this pair is "up to 2 miles."

My environment is about as friendly as it gets: on a clear ridge in a rural area--shouldn't be any RF interference here and have line of sight. I've tried them on the road in numerous places with about the same results.

The pair of Kmart walkie-talkies my brother and I had as kids work as well as this pair does. At least the weather band comes in nicely. (Weather band broadcasts from about 20 miles away if that is of interest.)

Well, anyway, thanks in advance for all comments and suggestions.

- Tim

My new TM-V7A (Christmas) has developed the same problem with the PTT dropping out of transmit. The drop-out lasts about 0.5 sec or less, but I hear the squelch and the other guy hears me drop the repeater. Am going to my local ham store Saturday to see if they have a fix. They're a KW repair center.

The drivers will over heat. The finals are ok at about 150watts out, but the drivers will super-heat. The rig is designed for 100watts output, and that is what it should be set at.
The only person that will notice the differance bewteen 100 & 200watts output, is you.

Nicholas Bluhm wrote:

1836. Any Henry 3K Premier owners?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <ldxf4.1763$bQ1.33359@dfiatx1-snr1.gtei.net>
Source record: 88613

My Henry 3K Premier console amp has had an odd/interesting recurring problem, in that the link running from the roller coil in the tank circuit down thru the ceramic feed-thru and then to the variable capacitor develops SERIOUS heat, rapidly causing mechanical failure of that part of the circuit. It is especially the 3 inch long strap connecting between the feed-thru and the frame of the variable capacitor that overheats and then fails - but the threaded hardware of the feed-thru itself also displays serious heat damage. NOW, it's pretty obvious that there is FAR heavier heat/current concentrated in that area than is normal - and other MUCH lighter components at other points of the tank circuit are totally unaffected - the amp functions perfectly, with excellent output right up to the point of failure.

I'm *NOT* looking for advice or speculation as to cause, only whether OTHER 3K owners have had this problem, and what they did to correct it. I've contacted Henry direct, and MAY get help from them, but figured other users help might be of value as well...

> organizations did not take that license as proof of electrical skill.
> For those organizations, that license was only proof that you had some
> basic understanding of basic electronics and therefore would be easier
> to train than another person.

Well, well! And today, that can't be assumed, without
further testing. Once a ham radio license conveyed some
minimum level of knowledge and skill, in most cases. Today,
no employer who knows what has happened over the past couple
decades would consider awarding that 'credit' without other
independent confirmation.

> And the ham license of today still serves that purpose.

I'm afraid not. Today's ham license proves only that
licensee was only at least minimally interested in radio,
enough that he completed the licensing process. The FLAWED
licensing process.

However, it
> plays less of a role in the hiring process today simply because radio
> plays less of a role in an electronics career today.

There are fewer two-way radios in use today? What rock you
been hiding under? And there aren't a mass of wireless
services that have sprung up overnight? These are not
"radio"?

Years ago, because
> of the greater role radio played in an electronics career, many more
> organizations were willing to give credit for any radio training (no
> matter how basic). Since radio plays less of a role today, fewer
> organizations give that credit (even those who did years ago).

Your conclusion is true but you erred in your reasoning.
Radio is more widespread than ever, in every area of life.
Even the dreaded HF telephone wireless modems are radio.

> I also think you're being a little disingenuous here, Dick. After
> working at a radio/tv repair shop, graduating near the top of your
> electronics school class, and working in electronics in the military, I
> really doubt that the ham license really played that much of a role in
> your later employment at that "good technical job."

You'd be wrong. And to top it off, they even gave me a
Morse code exam!
The organization had discontinued the use of Morse not long
before, but still retained it as a backup to wireline
teletype. ALL the officials who were involved in the hiring
process were longtime hams themselves, and knew all about
what a ham ticket meant *then*.

> The simple fact, whether you want to admit it or not, is that the ham
> license exam has always been an extrance exam into the world of hobby
> radio (hobby radio, not professional or commercial radio). That is the
> way the FCC designed it many years ago, and that is also why there have
> always been other, much more difficult, license exams for professional
> or commercial radio personnel.

That is neither a simple nor a complicated fact, in fact it
is no fact at all. Just as Novice was the preferred entry
point into ham radio, a ham license was once the preferred
entry point into commercial radio and electronics. The
commercial exams came later (been there too). THAT is what
has changed.

> With that in mind, the existing license exam system serves its > purpose well.

Sure does. It sets the ARS up for making our frequencies
available for reallocation to commercials, since such a
trivialized "service", now easily equated with other trivial
services such as the Citizens Band service, is much less
valuable in its own right. Only ours has VAST SPECTRUM
available for the taking. FCC has just completed the setup
by doing exactly the oppositee of what they said - they have
made the Amateur Radio Service a **NON-technical** entity,
and you have just helped to confirm it all.

I'd imagine the Question Pool Committee will further
confirm it after April 15.

I've been following some of the threads in this NG with some amusement and some sadness.

I see a lot ot HAMs saying they are going to give up their licenses and equipment because of the changes in the requirements.

I for one have been studying to get my Tech-Plus license, and would hate to be thought of as some new kid coming in and driving out the more experienced operators out there. Do I like most of what I hear on CB radios; no, not really. But there are those out there who are good operators, considerate and just nice to talk to.

You have to start somewhere. The CB was my first introduction to 2-way radio, then 11 meter. Now I want to move up. Does that make me a bad guy because I will be able to by learning only 5 wpm code? does it really matter how fast I can send and receive? I've gotten many messages from HAMs who told me that there would plenty of operators out there who would love to see some new blood, who would be patient and helpful as I tried out my new "fist". Now I see more and more negativity...

My question is: is it all worth it? If I will be judged by when and how I got my license, and thought less of... maybe I should just forget it all together.

my ramblings....

Most 10 meter fm repts.. are toned now because idiot cbrs try to get on
them.

Needing an owners manuel for my Grundig Sat 700, I did a search for Grundig's email address and found , grundig@gims.grundig.de . I emailed them with a request to obtain the manuel and I recieved a reply from : Claudia.SCHWARZ@grundig.com , who advised me to contact :

Lextronix, Inc.
3520 Haven Ave.
Redwood City , Calif. 94063

Phone : 650-361-1611

Seems they are the authorized Grundig agents in the U.S. I suggest first trying Lextronix and if they can't help email your request to Claudia Schwarz. Hope this helps.

I tend to not worry bout what others think of beginners. They were beginners at one point in time themselves and so was I! I went and got my ticket because it was what I wanted regardless of what the snob hams thought about it! They learned to talk to me like anyone else after they got to know me and treat me with respect. Much like on the k6fb repeater in the bay are, I was brushed off like a nobody, but after repeated attempts to talk to those I did know on the system, the others gradually came around and accepted me and easily accepted other newbies when they found out we werent that bad! So some of the new blood has got to the old blood and all have learned a lesson! Dont let others discourage you for what you want! Oh, I also heard visitors on the system with general or higher license get treated like newbies, so it isnt just you!

Message-ID: <85mfj6$6ud$2@news.datasync.com>
Source record: 88627

Thanks for the report Sean. If you come up with any other
odds and ends I'd love to read about those too.. I think
my next rig is going to be an Icom 706MKIIG to replace the
V7A and then after that I'll work on a D700A :)
Jimmy KB5FSV

Sean Baxter <NOSPAMsbaxter@gte.net> hath said:
: A few notes on the new Kenwood VHF/UHF Packet radio.

: I have had the radio for about a week now. I have yet to find any problems
: with it, all functions I have used work as advertised. I use only the voice
: and APRS functions. I did not try any SSTV or connect directly to the
: internal TNC via serial PC connection. You can even connect an external TNC
: that can be controlled by a serial connection to a PC.

: First, the new amber display is a big improvement over Kenwood's V7 blue
: screen. You can easily read this display in direct sunlight! Kenwood also
: brought back the sub-band Mute function (was on the 733A radio) which they
: removed from the V7 radio (which I really missed). The DX cluster function
: works. On the screen you can see up to 5 postings with the ability to
: "page" and see comments of the DX post. You can also page station postings
: per screen (5 postings per screen). The DX cluster function is a receive
: only function, it also removes duplicate postings for a particular DX post.

: It is very cool to have the radio on 144.390 Mhz APRSing away and the
: sub-band can also be on 2m repeater. When the APRS side transmits it only
: blanks out the sub-band (only if you are on 2m) for a second. If the
: sub-band is on the 440 Mhz side you do not know the 2m side is transmitting.

: I use a Garmin GPS III+ that has NEMA input/output which allows me to see
: the station call signs of APRS stations on its map (up to 6 characters). I
: use an external antenna (for the GPS) that is stuck in the far right-hand
: corner of the dashboard and it receives the GPS signals very well. You need
: only one external dual band antenna and you are ready to go. D700 has only
: one antenna connection for VHF/UHF.

: The look and feel of the radio is nice. The rubber type buttons have a good
: feel, larger VFO knob make for easy function changes.

: Looks like Kenwood has done their homework on this radio. No complaints so
: far but I wish it improved on the following:
: 1) Only 40 station list in APRS listings. In the Philadelphia area that
: list will scroll out in about 15 minutes - need at least 100 station list.
: 2) Only can view up to 64 characters in an APRS message. Need to be able to
: page to a second 64 characters message display.
: 3) Kenwood should have made an internal GPS unit an add-on option. This

: would make getting on APRS for a new comer a snap...connect external GPS
: antenna and away you go.

: Sean - K3XT

1851. Icom 706MKIIG comments

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-14 00:00:00 UTC
From: The NeXus <nexus@datasync.com>
Message-ID: <85mg0e$6ud$3@news.datasync.com>
Source record: 88628

I'm looking for Icom 706MKIIG comments from owners and
past owners. I would like to know what you like about
the radio and what you hate about the radio. I was going
to get a Yaesu FT100 but after reading all of the complaints
I've decided to spend the extra 300 dollars and go with the
Icom. However I still want to know more about it prior to
commiting the money.

Primary useage will be land-mobile remote mounted in a 1995
Chevy C1500 Silverardo Truck. I'm concerned with the amount
of noise my truck will generate in the radio. I'm still not
sure about the antenna but I feel like its going to be one
of the Outbacker models (StealthPLUS) Mainly for cosmetics.

Anyhow tell me your story, I want to know what I'm getting in
to before I kick myself in the head for making a mistake. I
certainly don't want to get a lemmon like Yaesu appears to have
delt so I want advice.. thanks..

That's dreadful. VAT has already been paid at the time of original
purchase -- you shouldn't have to pay it again.

We're getting a GST here in VK mid-year. Should be interesting ...

Lee <g-k@home.com> hath said:
: I see a lot ot HAMs saying they are going to give up their licenses and
: equipment because of the changes in the requirements.

Let them, if they feel that strongly about it. There isn't anything
they, you or I can do about it, whats done is done and its final!

: I for one have been studying to get my Tech-Plus license, and would hate to be
: thought of as some new kid coming in and driving out the more experienced
: operators out there. Do I like most of what I hear on CB radios; no, not
: really. But there are those out there who are good operators, considerate and
: just nice to talk to.

I've been a ham for 12+ years now and I can understand where some of them
are coming from. When I took the test I had no choice but to take the
code, but when they came up with the no-code tech I was pissed that I had
to go through it but the new ones wouldn't, I got over it in a short time
and even began to use it to my advantage and talked a few friends into
getting their license, which they did, after that I was ok with it.

: You have to start somewhere. The CB was my first introduction to 2-way radio,
: then 11 meter. Now I want to move up. Does that make me a bad guy because I will
: be able to by learning only 5 wpm code? does it really matter how fast I can
: send and receive? I've gotten many messages from HAMs who told me that there
: would plenty of operators out there who would love to see some new blood, who
: would be patient and helpful as I tried out my new "fist". Now I see more and
: more negativity...

I started out on CB too. I was big into REACT and local civic activities
that had any dealings with CB, I was also part of a DFing team which went
around on the weekends and DFed for CB stations breaking rules and
reporting to my local field office. That was 16-17 years ago. A lot has
changed since then. I became a ham, both of my parents did, and I got in
to ARES, RACES, SKYWARN, Civil Air Patrol Comms, active member in 2 clubs
and active on field days and SETs. I've done my share to help the hobby
although for a while now I've missed operating in the HF bands either due
to no longer being in CAP or the band i could work being dead. I should
of never stopped at 5WPM when I was studying 12 years ago but did because
when I got my novice+tech license I had what I wanted, 2 meters. Now only
having to take a written element in order to get on HF is going to bring
a spark back into my hobby and I'm excited and ready to go, I intend to
ACE both General and Extra written...

I'm not a lid, nor a CBer, nor a freebander, nor a loser who's going to
ruin the hobby by my precence being on 75, 40, 20, 15, 12, and 10 meter
phone. I'm a seasoned ham, I've worked DX, I've worked contests, and

yes on those bands under third-party, I've been the other side of a pile
up. I'm not a new kid on the block, but all of the stuck up morons are
treating you and me as cb'ers just the same, I say so what, thats life
and move on to the next contact.

: My question is: is it all worth it? If I will be judged by when and how I got my
: license, and thought less of... maybe I should just forget it all together.
: my ramblings....
: Lee

YES ITS WORTH IT. Sure some people are going to judge us by when and
how we got our license, I say SO WHAT! I know in my mind how good I
am, I know in my mind what kind of person I am, and I'm not about to let
these morons ruin my hobby, and thats how you should stand too. Let them
say their peace and just continue to move on. I promise you there are
several hams out there who will be willing to QSO with you when you get
your HF privilages, and those who refuse just won't get a QSL from you :)

Funny how americans seem to be the only outspoken and outraged over the
FCC ruling. You can bet that DX isn't going to give a damn if you have
20WPM or 2WPM on your license. As long as you are a good contact things
should go well as far as DX QSOs are concerned, most of the other places
in the world have done the same thing as we have with CW requirements so
they are already use to it being normal..

If you quit now then you are going to miss out on all of the interesting
and fun things about the hobby, ofcourse I'm not trying to say its going
to be error-free. Its going to take one of a few things before people
stop bitching about this and start acting like civilized humans with a
common interest in a hobby we're all invloved with.

1. they'll die soon, and no one talks from the grave
2. they'll sell their gear and let their license expire
3. they'll finally let go of the anger and embrace us

Until one of those happens to the select few who have decided to alienate
themselves from the rest of Amateur Radio we're going to be in for one
bumpy ride. But none the less I intend to still have fun. And now that
your going to get your General or Extra class you should get into a club
that supports DXing and begin working for some awards and get invloved in
contesting. Go do IOTA or any club sponsored contest on the weekend, when
you hook up with a group over the weekend and use your class to help aide
in the contest scores you'll be appricated(sp) and feel welcomed, then
maybe you'll know that yes, it is worth it.

These are just my ramblings :) Jimmy KB5FSV

I have a Kenwood TS-450S, its an exelent radio, if you want to
spend less than 1000.00 you should be able to find one of these
on ebay or in rec.radio.swap or one of the other radio forsale
groups. I don't know if you can get this radio new anymore
I know Kenwood doesn't list it on their site, but for an all around
HF radio its very high quality. Have owned mine for 6 years now
after it replaced a TS-440SAT that was destroyed in a direct hit
to the house with lightning, and the 450 hasn't missed a beat since.

If you want 6meters also you should look at something else though,
this is 1.8mhz~30mhz operation only, gen coverage 100khz~40mhz

No, but if you've made the effort to learn and understand the theory (and not
to memorise the questions) it's something you can be proud of perhaps.
In VK when you get your license you get both the station license
and a certificate of proficiency. The unrestricted license is the
"Amateur Operator's Certificate of Proficiency" for example. This is
actually quite a nice certificate, with the seal of the ACA etc.

Hi, People!

I'd like to very respectfully and with no malice aforethought <bwg> request that there be some "tailoring" of cross-postings.

I'm over on "rec.radio.shortwave" and there is all sorts of "ham" stuff being cross-posted to it that have nothing to do with SWLing but only with hams.

I think y'all are great and I owe my interest in SWLing to hams but if I wanted to be "in" on ham stuff, I'd subscribe to ham newsgroups.

When I got on the Internet in 1989, this wasn't a big deal as the ng's were so small but - in 2000 - this x-posting really bogs everything down.

As I said: no flame, just a respectful request.

Many thanks,

Gray

Hi David

Don't feel bad. I've been a Ham for some 41 years now and never understood why they ever had a code requirement over 5 wpm anyhow.

I worked 40 meter CW for about 25 of those 41 years, then I burned out on CW entirely.

Those who want to use CW and enjoy it, more power to them, but in this day in age, perhaps a typing test would be more appropos that a code test.

1873. Re: SGC antenna tuners - reliable?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-15 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <IS0g4.1016$541.56625@newsread1.prod.itd.earthlink.net>
Source record: 88445

Well, for the past 6 months or so, mine has been working flawlessly. The last two times it's been back to SGC, it was apparently the CPU that failed. The control cables to my 230 run in an underground conduit so haven't had any problems with stray RF. I use 8 conductor rotor cable, about 100 feet of it, between the shack and the 230 location.

The only time I have to reset the 230 to affect a match is when I use my 40 meter delta loop on 160 meters. As you can imagine, this is a difficult match, but it is possible and gets out OK. I have the schematic you mentioned. I ended up with the SGC controller only because it was free at one time from AES with the 230.

One other thing I've noticed: Prior to the last trip to SGC, the tuner would normally deliver a match very close to 1:1. When it came back the last time, it seemed to be happy just getting the match down to just below 1.5:1 . I believe that's what their spec says and it probably results in less frequent retuning and it really isn't a problem.

It's hard to understand why anyone would consider buying one of the multi-band verticals, when you can get much better performance and flexibility using the 230 and simple wire antennas. Of course, if you run higher power, then the 230 is out as an option.

Source record: 88448

You bet they are!!! I have an SGC-230 and a 235. I run the 235 mobile with an SGC amplifier. I use the 230 portable and fixed. I have had to send my 235 back to SGC for repair a couple of times due to components failing. They don't make the components they just install them in their products so I don't fault SGC for their failure or the possibility of my exceeding the limitations. Service has been the BEST that I have ever encountered with a ham radio product, bar none! They e-mail, they fax, they return calls, they write. I have NEVER gotten that kind of response from Yaesu, Icom or Kenwood, Standard or Alinco. I have them all. I have run an SGC 230 and operated it during a T-storm during field day with no problems. I was lucky! But having taken a hit on my tower I don't do that now! I sent my 235 back to SGC for repairs that may likely have been the fault of my installation not having enough ground straps. One time it actually caught fire inside while operating the MI QSO party on 40, but still worked on other bands. Got the unit back, no charge, withing a week or two, and then I added more ground straps to it. No problems since. Been more than a year now, knock on wood! running 500 watts mobile. Ground straps are key. It may not be as good as a screwdriver or bugcatcher, but way more durable! Go under some 8 foot limbs with your screwdriver or 40 mph thru the wood or dunes with a screwdriver! Inverted L, vertical, dipole, loop (inside or out) whatever your fancy or need, SGC will likely couple to it. Notice I did NOT say "tune" because it does not do that. The coupler "couples" to whatever you want to radiate your signal, does it well, does it automatically, does it inexpensively (considerering all other options) and does it very conveniently! Looks good on a Hummer!
I have not yet decided on the next experiment. Mine are NOT for sale even tho I do not use them all the time.
My SGC couplers do NOT hold a candle to my X-7 +40 at 100 feet, but I can't move that from place to place!

AND eliminate the bulk of the federal Morse code subsidy in
the process. Conservatives believe in a free market (of modes).

From: Chuck <wantanbe@hotmail.com>
Message-ID: <3880c0c3_3@news.jps.net>
Source record: 88455

I have an the following items for sale...

1) RCI-2950 about 1 year old. Freq mod (26.0-29.6) only. Has been mobile since purchased, so it has a few small (non-visable) marks on top where it
rubbed the dash, otherwise looks fine, guaranteed to work when shipped. Comes with bracket, manual, and box ($200).

2) Wilson 'Little Will' (500) Mag Mount, tuned for the above radio ($50).

3) Wilson 'Little Will' (500) Mag Mount, never tuned... same as new ($50).

4) Antron 99, excellent shape... plus 50' of 'gray' coax ($50).

5) Two BUD's (Big Ugly satellite Dishes - 7') and recievers for C-Band, one system up and running now, one on the ground. Both have weather-proof covers. Both systems complete as far as I can tell. AS IS, WHERE IS. Come and get it... ($350 for all).

Pre-pay or C.O.D. on smaller items, buyer pays shipping.
I'm near Lake Tahoe (CA).

Chuck

No, but when the ARRL decides that it's Hiram Maxim's birthday,
we can all go around signing "stroke 200"? Who the hell is the
ARRL to decide stuff like that? If they can decide, or if they
can ask the FCC for permission to identify this way, why can't
we (the 20+ WPM, 1-percenters, Extra Class pre-April 15th) request
the same?

Joe K7JOE "stroke 20"

Hi,

I'm thinking of buying an FT-847 sometime soon and wondered if anyone knew of any stores (mail order or other) where I can get one realy cheap. I've been seriously thinking of ordering in the US and doing a private import but I'd rather not have the hasle of the tax and duties and dealing internationally.

I'd also be interested in any general feedback about the 847 and whether anyone thinks that something miles better is about to hit the streets.

tks in advance,

Andy

I use a Motorola GP-68 for ham 2 mtrs. I don't have any business need for the rest of the coverage.

It has 20 channels, and can be left in program mode all of the time to fuction more or less like a 2 mtr HT. You can scan prog band limits also.

Comes with PL and DPL. Solid.

1909. HELP: BROKEN FT-1000 HELP!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-15 00:00:00 UTC
From: cheth@hotmail.com
Message-ID: <388142C4.D52506C5@hotmail.com>
Source record: 88481

Wondering if there was any help out here. Maybe someone that had the same problem. I have a FT-1000 as a back-up/portable rig. I use it mostly for portable contests. I hadn't used it for about 6 months and took it out to the field and set it up and it didnt work. It receives just fine and puts out a little power (30-40) before the SWR gets too high and cuts back the power. I opened it up and found there to be a glass tube soldered between the center conductor of the antenna connection and ground. The tube is cracked in half and all smoked up. I took the ground side of it off and still have the same problems. Any clues?

Please e-mail me replies for I don't always get the option to come to the board.

Thanks
N3BK@Scientist.com

Source record: 88507

Ron -

the ATAS-100 won't do 75 meters, and due to small size, is pretty limited on 40, but it does work. Best on 20 and up. The folks around here using them like them, but they are all staying on 20 and up. On the other hand, the ATAS100 will give you 6, 2, and I think it will do 440 (I'll stick with the dual band permanently mounted Larsen).

I use an FT100 with an old Webster Bandspanner from 80 thru 10, and it is about as efficient as practical mobile antennas come. 49 states on 75 meters mobile confirmed, so it must work... I just have to pull over to switch bands!

73,
Mike N5MJ

Sounds like there is a cold solder joint somewhere! RCI-2950's have a
worse problem when installed in mobile operations resulting in the rig
shutting off or display dissapearing. Your problem may be similar to
this. Remove your covers on the 2600 and gently tug at the side
chassis of the radio, not tugging to hard, just enough to put some
pressure on a weak component. You might find that this could be the
problem and that one of the IC Chips is seperating from the solder pad
on the PC board. Also be sure the screws that are used are not too
long and short on the inside of the radio. Here is another, Leave the
radio out of the mounting bracket and see if it still pegs.
Also be sure that the end of the speaker on the bottom cover isnt
shorting on any components. If there is something I left off, Please
fill in since I know there is.

There is a world of difference between 5 wpm and 13/20 wpm.

At 5 wpm you can still get away with thinking about each letter after it
is transmitted. By 13, and quite definitely by 20, you had better be well
integrated with the code, recognizing the "sound" of patterns, or you will
fail quite miserably.

Actually, it is not in San Jose, it's Sunnyvale. Lawrence Expressway
between 101 and the Central Expresssway in a strip mall at Arques St.
on the south side of Lawrence.

2 nice eateries in the same strip mall (St. John's has GREAT food and
it is a nice pub as well), a good Apple Computer store, and Fry's is
right around the corner (take Arques the other direction from HRO down
about 3 blocks), and HSC, a great place for weird parts and to see
some old and antique ham gear (one block east of Lawrence off
Central).

Used to live right around the corner from there.

<<<Remainder of post snipped for brevity>>>

George,

Excellent advice! Your missive sound so much like the advice I got from an old ham and former WW2 Signal Corps. radio operator who first got me interested in amateur radio in 1962 that I'd almost think he ghost wrote it for you!! He constantly drummed the "3 Ss" into me:

signal quality (and that doesn't mean power level or loudness),

skill in operating, and

style as a person (the old "Golden Rule" thing)

Anyway, I dropped out in 1983 (got too involved in other things), but in the last few months the "bug has bit" again, thanks to a friend from Germany who is goading me into getting back on the air.

Think I'm going to do it, just to spite these naysayers who say "Ham Radio is doomed"

: what's your location?"

Such CBers exist. You also hear hams say "What's your QTH?" - which
means "What's your what is your QTH." Just as bad, poor usage abounds
in both radio services.

Tom,

I've worked on 100s, 200s, 220s and many other portables over the years. All of them can be a bear to work on if you are not experienced with working on portable equipment. Hey, the first time I worked on a piece of equipment with surface-mount stuff I cussed up blue streak (my language darn near desoldered the parts without the soldering station :)). Now, it is second nature.

I'll totally agree with you that most modern handhelds have poorer RF performance than the 70s vintage radios like the 220, both TX and RX. However, those "bells and whistles" is what sells radios.

Honestly, relax and back up a bit from things and try to acheive a detached
perspective.
This restructuring will do no more harm than the no-code tech. change did.

Things will go on largely unchanged after 4/15/2000. Don't panic.
About the only real change will be that Extra and General licenses won't
mean quite
as much as they used to. Dumb, lazy, or slothful people will still be kept
out by the
5 WPM requirements.

I have a Kenwood TR-9000 (2m allmode) which has been upgraded to 25W.
It was working fine but over the last day or so I'm experiencing somet
difficulties -- on high power mode it seems to transmit off frequency.
Receiving is fine. Low power mode is fine. I don't know how far off it is;
I haven't been able to find the transmitted signal! :-(I don't know if
it is FM only, because I've only been able to detect it with FM repeaters
so far.

Anyone else seen this? Any ideas why? Very strange...

Hamish

Before you buy.

1950. Yaesu FT-1000 fan noise

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-15 00:00:00 UTC
From: KRIS UEBERSAX <nowires@home.com>
Message-ID: <38803244.28816D33@home.com>
Source record: 88534

Does anyone know a solution for the FT-1000 "groaning" fan noise?

This apparently is common problem. I sent the rig to Yaesu asking them to replace the fan but they sent it back saying nothing was wrong with it.

I'm hoping there is an aftermarket fan or some other solution.
Otherwise it is a terrific radio.

Thanks, Carl

Part 97 doesn't specifically address suffixes except
in question of "instant" upgrades where valid CSCE
holders can use specific suffixes to indicate that
they hold examination credit to use certain band/sub-
bands not encompassed by the current FCC-issued license
they hold. I wouldn't encourage such practice, to me
it would be simply a sour grapes response to the FCC's
elimination of the higher speed code elements.
The elimination of higher speed code elements is a
DONE deal, no "sour grapes" response within the
amateur community be it form of amateurs attemping
to identify themseleves on the air as "real" hams
because they passed a 13 or 20 WPM code element or
those that advocate VE's boycott participation in
the licensing process after April 15th is going to
make the FCC reconsider their action and restore
higher code speed elements as part of the licensing
requirement.

And it is a virtual (no pun intended) certainty that in 50 years a
current MSEE will be as relevant to communications electronics as a ham
ticket is today. . .

This is the last day for the QSYer auction. Its going very cheap!
Direct frequency entry - with no leading zeros and automatic mode
selection. Ready to plug in and use on the FT-990 or FT-1000. Can be
used on other Yaesu rigs by rewiring the plugs.

Another shining example of whats really wrong with amateur radio today. The attitudes of some like the above (and I really want to believe it the minority) are what is going to lend to the demise of amateur radio as we know it. Its a shame that these individuals choose to take such an immature stance, instead of becoming the mentors and "elmers" (whats that????) of the new folks coming up the pike. I believe its high time that those with the experience and knowledge of our hobby step up to the plate, and share what they have to offer to those of us who could benefit from it the most. Isn't that what its all about???

I sincerely doubt your problem is harmonic radiation- this being the ONLY problem that an LPF would solve. Sounds more like fundamental overload of the TV (HPF) or common mode (ferrite chokes).

A properly operating cable system would not pick up radiated signals.
However, I'd say your neighbor will need to install an AC power filter. She
may need to filter not just the cable box, but also devices hooked up to it.

Leader 20MHz Two-Channel Oscilloscope LS1020

Santa smiled on me with a new lab-quality scope, and this one is excess to my needs.
High-sensitivity (500 mV/div), accepts inputs up to 400VDC+AC.
Alternate triggering for ASYNC signals, variable holdoff, TV-V and TV-H presets, all solid-state except for CRT.
Price INCLUDES shipping CONUS, two probes (one x10 compensated, and one clip-on probe).
As-is (almost new), but only guaranteed not DOA. This just came off of my workbench!
Radio Shack's Commercial flyer lists this item as being on sale this month for $449.00, + taxes + S&H.
You can have this one, in almost new shape, shipped to your door for $160.00. Will also swap straight-up for Yaesu 33R or Icom 3AT / 03AT 220HT.

Source record: 88308

Just read a write up of an older Swan unit. Might have been the 500 but not sure. Anyway the vfo in that unit does not operate in the range of about 5 to 6 MHz that many do but changes from band to band. THe higher the band the higher the frequency. That is one reason it drifts so much. The Swans of all kinds have a bad reputation of drifting.

I had an old Heathkit that took about 30 minutes to become real stable, but after that I could copy RTTY with it for very long times with out tuning. RTTY requires the frequency to be within about 20 to 30 hz for the filters I was using. I could tune it to the W1AW station and copy the whole bulletin without retuning.

I had a problem where the audio from my transmitter would come through the speakers on my television, hi-fi vcr, stereo with surround combination if I have the dolby surround "ON". The television receives it signal from a yagi on the roof. I use a R7 vertical not too far away. The interfering sound is not to loud and goes away when I turn the Dolby surround "OFF". My transmitter does interfere with the television picture a little mostly when I am on 20 meters phone and the television is on channel 4. I have tried Radio Shack and Vectronics HP filters on the TV and VCR and wrapping the speaker wires with ferrite but it does not seem to really help. The Vectronics has both a HP filter and ferrite core for common mode. It is not that bad of interference but I would like to get rid of it. Do you think wrapping the AC cord with a ferrite filter would help? I am only concerned about the sound interference. I guess I could try the old LC 100 uH choke and .001 uF shunt cap on the speaker side trick. I hate to go through all that work to see that it does not help one bit.

Since my shack is in the basement I use a cold water pipe for ground. I have a ground rod next to the R7's antenna mast. I strap the ground rod to the cold water pipe also. I also have a Alpha Delta Transi-Trap lightning protection device in-line with the HF cable. The lightning protection device is strapped to the cold
water pipe as well.

>that needs to be repaired?

If it is like my old Swan 350 (lovingly called a Swan 3-drifty), the main problem is thermal drift. The VFO oscillator is the culprit. If you can find an external VFO to use, that should solve most of the problem. Or you can do what I did, and build an external VFO. I just ripped the parts from the inside and built it in a box outside. (BTW the VFO oscillator is solid state.) I even used a separate supply to avoid any FMing. The VFO as designed was also mechanically unstable, so build it in a substantial box to avoid microphonics, and avoid bumping it.

Another mod that some used was to leave the filaments (but not the rest of the voltages) on all the time, thus keeping the rig warm, and eliminating the more severe warm-up drift.

There was an argument in those days whether tubes lasted longer being left on all the time, or being turned on and off. Now the same arguments arise about computers. The more things change...

This is a common problem with the TS-440. The rubber compound used to improve
the freq stability of the PLL causes a failure. See the following url's for
details:
http://216.98.255.24/Amateur/AmateurServiceBulletins/ASB0973A.JPG

>Personal experience has taught me one thing. Morse code tests are put in place
>for a reason. A quick analogy is thus..... Do you want a Certified pilot
>flying your aircraft or do you want a High School dropout????

I want a pilot who is good at flying - who can demonstrate the knowledge
and skill that a pilot actually uses day-to-day, plus the things that
may be needed in an emergency. I don't care if he's a high school
dropout who learned what he needed to know elsewhere. And I certainly
don't give a damn if he knows Morse Code.

The same goes for amateurs. If they're operating a transmitter, they'd
better understand what frequency and power limits apply to them, and
appropriate procedures. If they're operating CW, they need to know
Morse code - and otherwise they don't.

And there are plenty of hams doing useful and interesting things
with radio without benefit of Morse code.

Yes, drift is typical of ALL radios. As I said, operating specs ALWAYS list drift over time for radios with BFOs. I didn't state that they were all terrible, just that they all experienced a degree of frequency drift when cold.

Well, I'll get blasted for this but, here goes...

My IC-735, new, right out of the box, indicated an output of 150 watts!!! I know what you are thinking but, I am a professional two-way tech and have been for nearly 20 years, I think I know how to measure power output.

I chose to drop the output to 100 watts just so I knew where I was then, dropped the lower end of the power control to 5 watts (as opposed to the 10 from the factory). This gave me a reference output so I can work a legitimate QRP level. I believe that had I left the radio at 150 watts, I would have been just as clean as at 100. Those finals are just conservatively rated.

Heck, once you disable the alc, and thats what they are doing to turn
the power up, it's trash city. My 730 will do the same. On an icom of
those types, you should always show a bit of ALC indication. If you turn
the power up, you will show none. Real bad news as far as distortion.
The maximum power that should be run on one of those, would be the
maximum power used, and still be able show an ALC deflection. If you
show no deflection, you can be assured you are quite trashy, and someone
has likely "golden screwdrivered" the power/alc settings.
They should put a padlock on those doggies. G My 730 at it's maximum
CLEAN power level, is only about 95-100 watts. Won't do any more without
getting trashy. MK

LAST TIME ON eBay! This is the 3rd listing and the reserve has been lowered beyond belief (my own belief!)...Photos are available on eBay!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=237092403

Yaesu FT-51RH 5w Dual Band HT w/ accessories

Last Listing! Reserve has been made even LOWER! Close to $500 in original equipment all in EXCELLENT CONDITION!

Dual Band (2m/440) FM Paging Transceiver. Excellent condition. Just a tad over a year old. Always kept in the leather (simulated?) case and rarely used outside. Excellent, like new, condition!

If you are bidding on this radio you know Yaesu quality. I can tell you that this is an excellent performer and I am only selling it because I have one too many radios and this one picked the shortest straw.

Lots of features, excellent radio, very clean. All of the features you would expect in a high end radio.

Also including the following accessories:

FNB-38 NiCd battery (5 watts) 9.6v 600mah
FBA-14 Battery Case for Alkalines
E-DC-12 Auto Adapter/Charger w/ Noise Filter
CA-9 Base Charging Stand
NC-65B NiCd Battery Charger (for use with CA-9)
Dual Band Rubber Duck antenna
(Simulated?) Leather case
Original Manual

Will only sell to licensed Ham Radio Operator. Will use iescrow.com for easy payment and protection for buyer and seller. Buyer pays actual shipping. Email any questions. Very low reserve given all the accessories.

Those "20WPM Extras" that are icons of Amateur Radio legend have given
us underlings a good education on how to act on HF by putting these
practices on display on 3898, and 14313 and other pompous sections of
those elitist bands. I as a no code tech that passed his advanced, and
almost passed the extra written when I tested for my license will be
looking forward to talking with all my dear friends on HF while I use
fowl language, discuss the intricacies of trailer trash, tell cat
killing stories, and work the actions of my firearms, as I have heard
all of you fine examples do for years. I salute you in your pursuit of
Amateur Radio excellence, and hope to join you soon. Even now I am
studying up on my code, and it will give me another use for the best CB
I ever owned. An Icom 706 mark 2! Two meters, 6 meters, and CB all in
one box. Life is good!

Not typical of ALL tube type radios.

However not uncommon with Swans. Some worse than others and likely worse than it was when it was new but all that I ever used were NOT stable long-term.

Source record: 88353

I had a SWAN 500CX and it drifted on 10 meters like there was
no tomorrow. All of the other bands were fairly tolorable but
on 10 meters it was the worst. I also have a Collins S-Line
and there is absolutely no drift detectible at all, Collins is
tube-type as well so I would have to say No, not all tube type
rigs have bad drift. If you want a good dependable HF station
that is tube time, go get a Collins, If you have the room get
the S-Line, its a Transmitter, Receiver, Station Control, Power
Supply, and the optional 500watt 30-L1 Amplifier. If you don't
have space look for a KWM2-A transceiver. I highly advise them.
http://www.collinsradio.org is a good source of information.

The Swan was a nice radio, I liked my 500CX but my operating
priviliages for phone was 10 meter, and thats where it drifted
the worst so I ended up selling it years ago, it was my first HF
radio. :)
Jimmy KB5FSV

Cbisket@webtv.net hath said:
: When I turn on the rig, the S meter pegs and after the tubes warm up, it
: settles back down and a side tone is present. Tune to a QSO in
: progress and it drifts off freq and has to be retuned back about every 2
: min or so.
: Is this typical of the old tube rigs, or is there a problem with it
: that needs to be repaired? Anybody have experience with "Hollow State"
: equipment?

Hi all,

I have a very clean Ameritron AL-811 160-10m amplifier for sale. Low hours on original tubes (three 811A), full output. Amp is rated at 600 watts PEP SSB, 500 watts CW, 400 watts 1/2 hour carrier. Cabinet has a few scrapes and scuffs, front panel/knobs/meters are very nice. Includes original box and manual. A really really nice quiet 600 watt desktop amp for 385.00 + shipping of approx 37lbs from 60534. I can also bring it to the WCRA hamfest at Cicero motor speedway (ex Odean hamfest) in Cicero, IL this Sunday the 23rd. pic at: http://www.zuby.com/ez-image/main/811.jpg

For the person that has now decided to do the 5wpm or 13wpm test.
A set of 4 tapes from Gordon West, 2 tapes teach 5wpm, 2 teach 13wpm.
These sold new for $17.00. I just passed the 5wpm test and have no need for
them anymore
I will give them (free) to someone truly in need of them, not someone
wanting to resell them to make a buck. All I ask is that you pay $3.20
shipping for them. I will update this post as soon as they are gone.

Please send your info to:
blueglow@mindspring.com

The SG-2000 has had a reputation for being unreliable. Check Deja for a couple of threads (this group and rec.boats.cruising) about a year ago.

The SG-230 is a good tuner. I have no experience with the SG-235, but I've had first hand experience with -231 design problems, specifically undersized components (admitted to by SGC techs); whether or not they've rectified the problems with that particular model, I have no information.

2011. loop antenna resonance vs. PVC enclosure??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: sjcduke@aol.com
Message-ID: <20000116161249.03825.00000252@ng-fb1.aol.com>
Source record: 88367

I have a square loop of bare copper 18 gauge wire.

Thru the use of a grid dip meter, I have determined that the loop is resonant at 145.710 Mhz.

If I run this wire thru PVC tubing of approx. 3/4 inch inside diameter, will the resonant freq of the loop rise, or will the resonant freq decrease?

Would the change be a tiny change.....such as now resonant at 146.000 Mhz.....or would the change in resonant freq be much more.....such as a change of several Mhz??

Thank you.....KA0FPJ

I just passed my Novice test at the Sarasota Hamfest yesterday, and it was because of the lowering of the code standard. I had a Novice license in the late 1960's, took the test again in the late 1970's (passed, but job and moving prevented operating), and now for the third time in the 2000's. I would probably not be back except for the opportunity to get a General without the 13 wpm. On my first go round in the late '60's, I had speed maybe up to more than 13 wpm, but not strong. Maybe if I had spent tremendous effort, OK, but I must have a block. I still plan to work code when the license comes, but I look forward to the SSB opportunity too. And when I get the General, I look forward to the wide open access to the bands. But the 13wpm kept me from making a serious effort to return to the art.

I'm no expert on the old and new regs, but my guess is the only real thing to change is the code requirement. The test is still there as a barrier to the casual berserker. I was saddened when the FCC released the questions, so that any idiot who wanted to memorize could pass. And when they made the code test multiple choice.

So, the standards have been sliding for the past 30 years (the period I have had an opportunity to observe since I started in). But the code thing gone now gives me hopes of studying up on the technical stuff and getting a general license real soon afer April 15. If the lessening standards have cheapened the art of radio, then it was already gone away in a handbasket, and the code thing isn't going to make a tremendous difference.

The types who plan to get 2000 watts and beam antennas to raise some hell may not pass the test, and why would they bother getting the license anyway? Every endeavor has its yahoos.

Hi Group!

I think I may need a LOW PASS filter to keep my emissions from interfering with the TV next door.
Here is the situation from the evidence presented so far.

Last week I had a multiband (multi dipole) inverted antenna up about 16 feet. It started looking very ugly so I built a multiband (three different quarter wave) vertical. Last week I received no complaints. This week I am told that my antenna is radiating into her TV. She hears my call sign on the unit with a fancy cable box in the living room. She does not hear me on the non cabled TV in the back room. Yesterday she did not hear me either and the verticals did not have a "counterpoise".

This morning I ran some 10/15 foot wires from the central ground point of the antenna out to a distance of 10 feet give or take to make a "ground plane". Now she hears something in the cable box.

Is there enough evidence here to suggest that the cable for the TV set is underneath my counterpoise? Or is the power line being invaded by my signal? If it were the power lines being polluted, would not the older TV in the back room be affected?

Would a LOW PASS filter that would allow nothing above 30 MHz to pass be sufficient or would anyone suggest moving the ground wires around?

Curtis Scholl

I share Scott's approach. As said elsewhere on this group, I passed the Novice exam for the third time in my life yesterday, drawn back to ham radio now that my difficulty with 13 wpm is soon irrelevant. I'm an attorney, and just have a tech interest that lately has been well-served with computers. So, the reduced code requirement will bring in some quality along with the rabble (we all can agree that a PhD is good for the art, but a lawyer is debatable).

I got an old stereo amp at a garage sale this weekend that has a bunch of tubes in it. I was told I could hook it up to my Cobra XLT29 radio and it would give me a bunch more radio waves out. I didnt see a thing on the back of the amp that would hook to my cb, can I just stick it into the input jacks on the back of the amplifier?

ARE YOU READY TO GET $40,000 IN 6 WEEKS WITH ONLY 8 BUCKS !!!??
If everyone just sends $6.00 And posts to at least 200 groups, we will
all be happy!!!!!!! Happy all the way to the
BANK!!!!!!! I found this posted in another group and thought I'd try
it just for a laugh. Guess what? I'm laughing the whole
way to the bank. I already earned $2,500 in almost 3 weeks! Following
is that original post. Take a minute to read it. I'm telling
you--I'm a very skeptical, but even a skeptic likes to make money. And
the initial investment insignificant....LESS THAN
$8.00!!!

Here is the original post:
****
Awhile back, I was browsing these newsgroups, just like you are now,
and came across an article similar to this that said you
could make thousands of dollars within weeks with only an initial
investment of $6.00 plus stamps! So I thought, "Yeah, right,
this must be a scam!" But like most of us I was curious and kept
reading. It said that if you send $1.00 to each of the 6 names
and addresses listed in the article, you could make thousands in a
very short period of time. You then place your own name and
address at the bottom of the list at #6, and post the article to at
least 200 newsgroups. (There are about 32,000 of them out
there and that's quite a large market pool). No catch, that was it.
Even though the investment was a measly $6, I had three
questions that needed to be answered before I could get involved in
this sort of thing.

1. IS THIS REALLY LEGAL?? I called a lawyer first. The lawyer was a
little skeptical that I would actually make any money
but he said it WAS LEGAL if I wanted to try it. I told him it sounded
a lot like a chain letter but the details of the system (SEE
BELOW) actually made it a legitimate legal business.

2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD?....I called them: 1-800-725-2161 and they confirmed
THIS IS ABSOLUTELY LEGAL! (See Title18, h sections1302 NS 1341 of Postal Lottery Laws). This clarifies the program
of collecting names and addresses for a mailing list.

3. IS IT MORAL? Well, everyone who sends me a buck has a good chance of getting A LOT of money ... a much better
chance than buying a lottery ticket!!!

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps ... and
boy am I glad I did!!! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon and didn't
give it another thought. But the money continued coming in. In my first week I made between $20 to $30. By the end of the
second week I had a made a total of $1,000.00. In the third week I had over $10,000.00 and it was still growing. This is now
my fourth week and I have made a total of just over $42,000 and it's still coming in ..... It's certainly worth $6.00 and 6 stamps
!!!

Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that
if you follow the directions exactly, that you will start making more money than you thought possible by doing something so
easy!

Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money
come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the
following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This
program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully
adhering to the instructions.

You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You
are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However,
the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be
included in that list.

HERE ARE 4 EASY STEPS TO SUCCESS:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).
Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1) Robert Staley 1195 Court Dr. Apt. C Duluth, GA 30096
#2) SAM Howard P.O. Box 1065 Jennings, LA 70546
#3) Mark e. mark 3205 Merrill hall Provo UT 84604
#4) K. Moynihan, 19 Maryland Ave., Lowell MA 01851
#5) Sukiano PO BOX 4791/JKTM-JKT 12047, Indonesia
#6) B. McQuate 7560 Garden Grove Blvd. Westminster, CA 92683

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible.

STEP 4: Now, post your amended article to at least 200 newsgroups. (I think there are close to 32,000 groups) All you need is 200, but remember, the more you post, the more money you make!

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are a person of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)

So, as each post is downloaded and the directions carefully followed,
six members will be reimbursed for their participation as
a List Developer with one dollar each. Your name will move up the list
geometrically so that when your name reaches the #1
position you will be receiving thousands of dollars in CASH!!! What an
opportunity for only $6.00 ($1.00 for each of the first
six people listed above) Send it now, add your own name to the list
and you're in business!

==========
--- DIRECTIONS --- FOR HOW TO POST TO NEWSGROUPS --- DIRECTIONS ---
==========

Step 1) You do not need to re-type this entire letter to do your own
posting. Simply put your cursor at the beginning of this
letter and drag your cursor to the bottom of this document, and select
'copy' from the edit menu. This will copy the entire letter
into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top
of the blank page. From the 'edit' menu select 'paste'. This
will paste a copy of the letter into notepad so that you can add your
name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do
your postings in different settings, you'll always have this file
to go back to.

Step 4) Use Netscape or Internet explorer and try searching for
various newsgroups (on-line forums, message boards, chat
sites, discussions.)

Step 5) Visit these message boards and post this article as a new
message by highlighting the text of this letter and selecting
paste from the edit menu. Fill in the Subject, this will be the header
that everyone sees as they scroll through the list of postings
in a particular group, click the post message button. You're done with
your first one! Congratulations...THAT'S IT! All you
have to do is jump to different newsgroups and post away, after you
get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!! BUT YOU
HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving
money from around the world within days!
You may eventually want to rent a P.O.Box due to the large amount of
mail you will receive. If you wish to stay anonymous,
you can invent a name to use, as long as the postman will deliver it.
**JUST MAKE SURE ALL THE ADDRESSES ARE
CORRECT.**

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a
very low example). So then I made $5.00 with my

name at #6 on the letter. Now, each of the 5 persons who just sent me
$1.00 make the MINIMUM 200 postings, each with
my name at #5 and only 5 persons respond to each of the original 5,
that is another $25.00 for me, now those 25 each make
200 MINIMUM posts with my name at #4 and only 5 replies each, I will
bring in an additional $125.00! Now, those 125
persons turn around and post the MINIMUM 200 with my name at #3 and
only receive 5 replies each, I will make an
additional $626.00! OK, now here is the fun part, each of those 625
persons post a MINIMUM 200 letters with my name at
#2 and they each only receive 5 replies, that just made me
$3,125.00!!! Those 3,125 persons will all deliver this message to
200 newsgroups with my name at #1 and if still 5 persons per 200
newsgroups react I will receive $15,625,00! With an
original investment of only $6.00! AMAZING! When your name is no
longer on the list, you just take the latest posting in the
newsgroups, and send out another $6.00 to names on the list, putting
your name at number 6 again. And start posting again.
The thing to remember is: do you realize that thousands of people all
over the world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!!

So, can you afford $6.00 and see if it really works?? I think so...
People have said, "what if the plan is played out and no one
sends you the money? So what! What are the chances of that happening
when there are tons of new honest users and new
honest people who are joining the internet and newsgroups everyday and
are willing to give it a try? Estimates are at 20,000 to
50,000 new users, every day, with thousands of those joining the
actual internet. Remember, play FAIRLY and HONESTLY
and this will really work.]

** By the way, if you try to deceive people by posting the messages
with
your name in the list and not sending the money to the rest of the
people already on the list, you will NOT get as much.
Someone I talked to knew someone who did that and he only made about
$150.00, and that's after seven or eight weeks!
Then he sent the 6 $1.00 bills, people added him to their lists, and
in 4-5 weeks he had over $10k. This is the fairest and most
honest way I have ever seen to share the wealth of the world without
costing anything but our time!!! You also may want to buy
mailing and e-mail lists for future dollars. Make sure you print this
article out RIGHT NOW! Also, try to keep a list of everyone
that sends you money and always keep an eye on the newsgroups to make
sure everyone is playing fairly. Remember,
HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to
make the money!! GOOD LUCK to all and
please play fairly and reap the huge rewards from this, which is tons
of extra CASH.

Please remember to declare your extra income. Thanks once again...

LEGAL ? ? ? (Comments from Bob Novak who started this new version.)
"People have asked me if this is really legal. Well, it
is! You are using the Internet to advertise your business. What is
that business? You are assembling a mailing list of people who
are interested in home based computer and online business and methods
of generating income at home. Remember, people
send you a small fee to be added to your mailing list. It is legal.
what will you do with your list of thousands of names? That's up
to you."

So, build your mailing list, keep good accounts, declare the income
and pay your taxes. By doing this you prove your business
intentions. Keep an eye on the newsgroups and when the cash has
stopped coming (that means your name is no longer on the
list), you just take the latest posting at the newsgroups, send
another $6.00 to the names stated on the list, make your
corrections (put your name at #6) and start posting again.

==========

==========

NOTES: *

1. In some countries, the export of the country's exchange is illegal.
But you can get the license to do this from the post office,
explaining the above statements (that you have an online business,
etc. You may have to pay an extra tax, but that's OK, the
amount of the incoming money is HUGE! And as I said, a few countries
have that restriction.

*2. You may want to buy mailing and e-mail lists for future dollars.
(Or Database or Spreadsheet software.)

*3. If you're really not sure or still think this can't be for real,
please print a copy of this article and pass it along to someone
who really needs the money, and see what happens.

*4. You will start getting responses within 1-2 weeks, it depends.

ALSO REMEMBER
SEND YOUR $1 OUT TO EVERYONE ON THE LIST, EVEN IF THEY ARE NOT FROM
THE U.S. WHAT ARE
YOU WAITING FOR??? GOOD LUCK!!!

This is the original message.

2029. Fritzel Antenna Source?

Simply put,
The average Ham or budding HAM fits into one category. We are
all human. We all have the capability to learn, adapt, and apply what we learn.
Personal experience has taught me one thing. Morse code tests are put in place
for a reason. A quick analogy is thus..... Do you want a Certified pilot
flying your aircraft or do you want a High School dropout???? If you cant dont
or wont take the minimum CW test , please dont bother to enter Ham. If I could
do it, anyone with an ounce of self dignity and respect will achieve what the
rest have worked so hard to discern themselves from the DROPUTS in life.
A personal note I would love to SEE the powers that be, either raise
the required CW rates WPM to even enter Ham, or retest yearly EVERY HAM that is
still breathing. Only people that are CERTIFIED DEAF or AUDIO disabled be
excused from the School of HARD FISTING ..... Bob KB2OLV

I'm doubtful that a low pass filter on your transmitter will do any good.
This sounds like typical fundamental overload to me. If you were radiating
harmonics, they would show up on specific frequencies, and would move
as you tuned to different frequencies. That doesn't sound like what's
happening. The fact that the over the air TV is unaffected reinforces
this conclusion.

You're just coupling enough amateur frequency signal into her cable box
to cause this symptom. What you need to figure out now is how it is
getting in, and how to stop it. (Actually, it isn't legally your problem. It
is the cable company and your neighbor's problem. But trying to be
helpful in solving the problem is a good neighbor policy.)

The signal could be getting into the cable box either via common mode
on the cable or via the power line. Since the problem didn't exist when
you were running a horizontal antenna, but does now that you're running
a vertical, you need to look around and see how the relationship between
your antenna patterns and the cable and power lines have changed. It
is likely that you now have a current loop paralleling one or the other
now when you didn't before.

Unless you want to change your antenna system again, you can try
ferrite filters on the power cord and cable at the offending cable box.
(Providing the neighbor will let you do that.) There's no filter you can
add to your transmitter which will help.

If you only want to use a limited number of channels, a programmable
commercial radio that covers the frequencies of interest makes a very
good VHF or UHF ham radio.

The downside is dialing up new frequencies. The commercial radios are
hard to program, the ham radios you turn a dial and you are on the new frequency.

For what it is worth, I think ICOM radios are solid, I have a half dozen
or so of them, never had a problem.

First off you conceited stiff assed hambo pricks , I thought it was totally rude but typical of the I'm fucking better mentality, to attempt to ridicule me , for at first attempting a common courtesy of saying 73's as I sign off , no. 2 also the attempt of slandering the way I described the receive , ears , every ham that I am aquatinted with uses that term , then the ten four good buddy bullshit , you see you make yourselves feel better that way, Now that your precious code is but a thing of the past, its to bad you cant take a clue and figure out that your holier than though attitude has had more to do with getting the code dropped and the overall disinterest in amateur radio!!! Amateur Radio is a good thing.it is and has been a source of enjoyment for me for years,both listening,starting as a boyscout,or to when I got my ticket in 87, yes I know , the worlds longest running Novice,my own fault , with my schedule, and the fact that I have a number of other hobbies,and a business to run it hasn't been a priority as an American citizen , your type is no better than myself or anybody else! Am I a bad guy because I had the balls and adversity to join no code, or to say things as I choose , or is it that I told the truth about Stoner Radio's, yup if I had paid 600 bucks for a new one way back the I wouldn't want to tell anyone I'd gotten screwed either . The truth of the matter is that the average Cobra or Uniden works better overall with less problems !But them Stoners are neat to look at and are a trophy to posses.As to what freq. that I run , well in my truck its good old channel 19,on my base its usually 33lsb or 36lsb, depending on what net I check into, when I do bother to turn the other radio on its 28,300 to 28.500, as far as wanting to be an extra no thank you , not that much interest in it , especially with the caliber of assholes that I've ran into ,you see gentlemen , it doesn't matter to you folks how many times one might try and provide help during emergency times , weather ,storms etc.,or how many times you fire up your own 4x4 to rescue someone stranded in the mountains around here,or hours you put in on an emergency radio watch , your still less than than human and sort of a piece of shit in most of your advanced and extra eyes!!! As to how this thread has went so long or gets posted in other groups , it wasn't me,all I did was attempt to give my 2 cents worth on Stoner radio's , after having been a once proud owner of one of them .The only up-grade that I have any interest in getting in the ham world is 2 meter , although I do admit it has been entertaining listening to the Nazi's and KKK, on 80 meters , along with the preachers , yep that's right they all have the right to be there too . What I will say ,and in the Seattle area there already is a movement starting is that we need more people on the bands , we all need to loose our attitudes , self included, and look upon this as a new beginning , to take radio into the new millennium, I mean can you just imagine what forms of technology will come about in the next 100 years or so ? with that its time to close this , oh yes you all may continue your crass little comments , or whatever

but don't expect a reply,
and once again 73's to all if you
don't like that then , FYS, you figure it out ,

2038. Re: SGC antenna tuners - reliable?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: wb <willyacht@yahoo.com>
Message-ID: <q72g4.3718$3b6.16900@ozemail.com.au>
Source record: 88398

i have been using one for a long time on my boat and at home. Its a terrific product i wish they would make a 1 kw version. I will ad that it works better when you add 3 or 4 short radials of 1/8th to a 1/4 wavelength for each band. The tuner locks faster and tunes much more quickly.

Floyd Sense <sentek@sprintmail.com> wrote in message news:IS0g4.1016$541.56625@newsread1.prod.itd.earthlink.net...

Why even waste your time arguing with them? The way I look at it, we should be lucky the FCC decided to do this. I'm surprised they didn't make the regs tougher, to ward off more operators, so they could sell off the bands for lack of use. The FCC is a bunch of capitalist pigs who, on any given day, would love to sell the ARS spectrum to satellite comm opers....

>which will cause me to be proud to be a Ham. I do believe, that in a
>very short period of time, Ham Radio will become a vast wasteland,
>where no one with any intelligence will wish to associate.
>
>K2TL

Well, to a certain extent, it already is. From the audio snobs to the cheap assed, frugalized types with the horrible audio and the 500 year old drifty gear, I don't know which is worse. Intelligence is not a primary function of any radio service.... I dont care wether its CB or ham, or elsewhere, you have to DIG for folks with brain cells. There are bonehead extras and bonehead novices alike, no way to tell until you talk to them.

The only thing we can really do is to try and enjoy what we are given; attempting to change it is a fruitless effort. I still believe teaching folks technical subjects is a good idea, as the repair depots these days, just plain suck(the vast majority).... so It's going back to the point where we must repair/maintain our own gear again, and that in itself will be a very valuable skill indeed- and it needs to be passed on down the line.

2047. Re: Collins and Drake wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: Carl Domanico <cdom11@earthlink.net>
Message-ID: <388123F4.BF410912@earthlink.net>
Source record: 88407

Hi Martyn...Was just thumming through the news group looking at some of the oldies but goodies..and saw your ad....It made me think about the days of Collins Drake Swan, Nnational, etc..and I must say it brings back some really good memories...we'll I guess it was a different time then...When Radio Amateurs..Homebrewed and repaired much of their gear..along with antennas....I did own the complete Drake line at one time..and only one piece of collins gear..The desktop linear..30L1...with the (4) 811A..Great amp..I used to turn on the gear..first thing in the am..and leave it on all day every day...maybe 8-12 hours a day...loved it..worked flawlessly...Anyway Martyn..I don't want to loose sight of what my topic is...I can't help you out since I no longer have any HF gear here at all.....But aafter seeing your ad...You ssort of awakened that bug again for me..! I would like to get back on HF...and to reatin those memories as much as possible...not to mention it is a wonderfull transciever..I wonder if you could either refer me to someone who might have a very nice preferably MINT...Collins KWM2A Round Emblem
One that has been or was recently gone through completly..and realigned and brought up to factory specs or better...a plus might even be one with the solid state tubesters..if you remember those..which I sure you do..and of course a matching AC Power Supply...Or maybe I could persuade you to part with one of your goodies...in that caatagory????.....I'm sure you'll say no...but maybe appealing to you as a fellow radio amateur.with that feeling that you know.so we'll might help???...Please note this iss nott in anyway money situation, as I do not collect...But tthought it would be really nice to get back into HF with a Radio such as that...I'm sure you can both understand and appreciate my feelings.....Hope I have not bored you with this lengthly e-mail, but as I saaay your ad really made me think...Martyn,,,,Looking foward to hearing some favorable news from you...

Thanks a Lot..
Carl

I wouldn't call them capitalist since they didn't sell off any of the band and gave the ham radio service the ability to grow instead of shrink. If they infact were in it for the money, they would have sold the ARS long ago.

Just to make sure there's no confusion about the meaning of my last
sentence, above, it was an attempt at facetious humor. I trust your
reply was in humor also.

Anyone is welcome to call me a whiner, if it makes them happy.
But first, et's make it clear who the "whiners" are.

I put forth the effort to attain certain priveledges and the FCC
taketh away and giveth to those who are unwilling to put forth the
effort. The FCC would not have done this on their own volition had
it not been for the "whiney" masses who wanted the priviledges and
didn't want to put forth the effort (Supported by equipment
manufacturers, with their own (Duhh!) agenda).

Back to Audio...... apologies for my rant.....................

Regards,
John, W4DRJ

Guess CB radio is toast. With the new ham rules coming up soon, most of the CBers will be migrating to the other high frequency bands. Only ones that will be left will be the truckers. Possibly it might become a fun place to operate again.

This Reply was NOT posted anonymously:

No way. CB'ers are CB'ers. If they were going to get a license at all, they would have at least gotten a no-code tech. If they didn't want to put forth the effort for that, what makes you think they will all of a sudden decide to put out more effort to learn CW and take a more difficult written test ?

If the day ever comes that they can get a license with no effort at all, maybe it will happen. But until then they will, for the most part, remain on the chicken band.

Yes, those dirty business people. All they want is money! Funny how
Radio Shack started the Family Radio Service. Just think what would
have happened had RS gone after 80/40/20 mtrs.

Source record: 88426

John, I really don't so much dislike it. I still have it. So many tire kickers and people wanting to trade for it. John, I receive so many unsolicited great audio reports and the receive audio is very good.....for these two reasons I have decided to keep it. On the negative side, I dislike the keypad layout and the lack of bandstacking registers. I prefer the dual receive layout on both the Icom and Yaesu radios more than the 870.

The radio I just sold, a Mint 1000D, was easier to operate....it even had bandstacking
registers and is easier to quickly work DX stations operating split and it's considered older technology??? but I did not get those unsolicited great audio reports and the receive audio was sharper, not as pleasing to listen to as on the 870 but sharp and clear (FB Communication quality).

John, one thing that I am pleased with is the receiver. I thought it might have some IMD problems because of statements made on the reflector over the past few years.
I have not noticed any IMD problems....probaby because it is a very late one with the most current mods, 10 mill serial. One thing I would never, repeat never consider is putting the pair of 2.1 filters in this rig as YURI has done.....do that and out goes the beautiful transmit and receive audio. Then I would have no reason to put up with the keypad layout and the lack of bandstacking registers.

What settings are you using on receive and transmit concerning passband settings.

I set the TX to 3000 - 100, use a Heil Goldline switched to the wide range element
and a W2IHY 8 band EQ/Noise gate.

For receive I normally set it to 3000-100 and am suprised how well moving the 3000 down to about 2200 during rough conditions removes most if not all side splatter. Believe it or not normally ALL.

For now, I think I will keep the 870 and all accessories. I honestly think it's Kenwood's sleeper.

2069. Complete Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <3881BAB0.1F2C7985@lakefield.net>
Source record: 88429
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

The telewave duplexers new price for the TPRD-1556 is $1572.00 as
listed on internet site.
The Scom 7k with voice, phone, and prg lists new about $ 850.00 as
listed on internet site.
The Micor comes converted for 2m, with full manuals, and power supply,
in cabinet, is worth. $1500.00

The total replacement cost would be $3922.00
depending on what you can get a converted Micor base, or repeater for.

I am asking $2250 plus shipping and insurance, shipped from Manitowoc,
WI 54220

Please, serious inquiries only.

Robert Kubichek N9LVU
1502 South 10th. Street
Manitowoc, WI 54220-5706

I have the following for sale, Ebay seems to suck these days, so make offer if prices seem wrong.

Heath HW24T (Standard C528) 2M/450 w/ Mars/Cap mod / cell receive, battery, charger and 2 antennas, box, manual, some wear $200

ICOM IC-Q7A - W/Mars/Cap mod done, 30-1300MHz rx (no cell) w/box,manual, antenna, external mag mount antenna & SMA-BNC adapter
$160

Moonlight Products SAFARI Night Vision Monocular (no batteries needed model, HV gen on top, utilizes sqeeze for power, has external IR illuminator, which takes batts, with strap and daylight filter, perfect condition $200

Micronet NET-950 MDT - More info upon request $200

Toshiba Satellite T2115CS 486/75 MHz Color laptop, works fine, bad battery, runs on direct AC,W95 loaded..$250 obo

Photos upon request

Let me know if you have additional information needed

>Hi I have a realistic htx202 ht. Turn it on and it beeps the screen
>shows ER1 and i tried to reset same thing. Has any one run in to
>this befor? thank mwin1010@hotmail.com

Er1: INTERNAL RAM ERROR

Er1 indicates the transceiver has detected an error in its battery
-backed up operation memory. This is the most commonly caused by a
low lithium backup battery, but can also be caused by static
discharge, or a physical shock. To clear the error--

1. Turn off the unit.
2. Press FUNCTION and CLR (the D key).
3. While holding these keys, turn unit on.

This will reset unit and clear memories.

If the transceiver frequently displays the error, have the battery
replaced by an authorized Radio Shack service center.

2074. SWAN 500 drifts off freq (WHY?)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: Cbisket@webtv.net
Message-ID: <1275-3881D068-5@storefull-137.iap.bryant.webtv.net>
Source record: 88434

When I turn on the rig, the S meter pegs and after the tubes warm up, it settles back down and a side tone is present. Tune to a QSO in progress and it drifts off freq and has to be retuned back about every 2 min or so.
Is this typical of the old tube rigs, or is there a problem with it that needs to be repaired? Anybody have experience with "Hollow State" equipment?

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

2076. FA: Ham Magazines (various) on eBay

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: Radio Randy <rjones@theofficenet.com>
Message-ID: <c5lg4.93$JP5.6501@news.uswest.net>
Source record: 88436
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hi Gang,

I am adding (almost daily) new magazines in my estate auction on eBay. I have entire year issues of 73, CQ, QST and Ham Radio (some dating back to the 30's) and am listing them as I dig them out of the boxes. Anything newer than 1979 is going to the recycler as bid prices are not worth my time to deal with.

Please do not ask me to "look for" a certain year. I list 'em as I find 'em but, if you would like, Email me a list of wants and I'll notify you when I put them on eBay.

As always, ALL proceeds from these auctions are being forwarded to the estate. My "cut" is being allowed to keep some of the items I find. To date, these auctions have netted over $1000 for a very appreciative widow.

See my current auctions at:

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks everyone.

Radio Randy

All solid state except for driver and 3 (yes 3!) 6146B finals that delivers a "pileup breaking" signal. Features audio peak filter, variable IF bandwidth and IF shift, all modes(ssb,cw). The silicon development of the day gave it a digital display. Optional VFO gave a few memory channels and keypad entries.Radio is in excellant condition,matching external VFO(FV102DM)may need a little work.

And now for the results :

The original problem was that the S meter would peg and stay until the rig was squeezed, banged, or otherwise rattled.

What it came down to was:
1. I moved a group of wires from the solder side of the LCD board directly under the white connector. The connector has extremly pointy pins that extend quite far through the PC board. I assumed that one of those pins may just have pinched on of the wires passing under it. When the lids are on and everything was stuffed back into the radio, the connector and wires made a nice sandwich.
2. Resolder the same connector as above.
3. Resolder all of the points on the main board under the PLL box. It was suggested that a corner of the radio was subject to stress fractures at the point where the board is attached to the frame.
4.I found that the 4 chassis screws were too easily removed. I used star washers and re-installed them.

So far, 12 hours later the radio is peg free!!!!
I can only hope it stays that way.....

Thanks to all who responded with the helpfull suggestions!

It all runs in cycles I think. it was the same when widespread SSB use,
took over from AM. You had many that bailed out. And before that when CW
took over from spark gap, you had the same. "I'll never use a silly xmtr
that sounds like a bird tweaking and only does 30 watts." It's my 1 kw
spark gap, or I'll leave the hobby. And many did just that. Kinda silly
I think. If there is one thing that is certain, that history should
teach, nothing stays the same. And everyone is expendable. MK

2083. Re: SWAN 500 drifts off freq (WHY?)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-16 00:00:00 UTC
From: Radio Randy <rjones@theofficenet.com>
Message-ID: <KPlg4.131$JP5.8754@news.uswest.net>
Source record: 88443

Yes,

Frequency drift is normal in ALL equipment but especially so in older tube gear. That's why specs list freq. drift over a given period of time. Most tube sets will settle down after about an hour of being powered up. The drift will continue, but not as bad, after the rig warms up properly.

If your drift is severe, you could have some faulty component causing the problem.

Hi maybe you can help

I bought this camera too at compusa
I am using the serial port because I have windows NT
but I cant download more then 2 pictures the camera
says that they are stored but the software crashes on me
after the 2nd picture

are you able to take and download more then 2

what operating system are you using
are you using USB or the Serial cable?

if Serial what settings on the com port do you use

aint a bad camera if If can get it to work

thanks

From: Nicholas Bluhm <Nicholas.Bluhm@flinders.edu.au>
Message-ID: <8607dq$1jh$1@nnrp1.deja.com>
Source record: 88196

I don't have a service manual for this radio, so thought someone here might know...

What is the procedure for realigning the PBT shift oscillator? I have a little too much treble on USB. I can equalise the frequency response between USB and LSB by turning the PBT knob to the one o'clock position, but would rather have the thing operating properly.

2090. FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!! (fwd)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-17 00:00:00 UTC
From: Louis <lou1@primenet.com>
Message-ID: <Pine.BSI.3.96.1000117214118.15919N-100000@usr06.primenet.com>
Source record: 88200

FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!!

www.ebay.com item 238999733

FS: Radio for a '57 Chevrolet Belair, 210 and all related
models. It is in near-Mint condition! It has very recently been
totally restored electronically. All new circuits, capacitors,
tubes and totally checked overy by professional radio repairman.
The chrome is in very excellent condition - extremely shiny!
Everything works on this very rare radio.
All metal is in
really great condition. No rust. All checked out and ready to play
in your classic car. ..
I can send along the receipts I have for all work done. It is still in
original box from repairman. Due to the age it i sold AS IS. However, if
it fails to work when
installed it can be returned to the repairman to be fixed at no
cost except for parts.
Chrome is truly excellent but it does have a couple of tiny 'specs'
on the knobs. No fading at all on the chrome. Very shiny. Black
buttons are mint. Needs nothing! Tops of tubes have a nice shiny
chrome on the glass. These were not chrome plated but are a natural
part of many tubes. Lettering on "Wonderbar" switch is perfect.

First off, most of us couldn't give a rats posterior about your opinion on cw(by the way, its not gone yet, just reduced to a lower level) or on a few less desirable types on 80. I'm not sure about the "73's" or terminology problem your having with others here, but your mouth is such a sewer. Obviously you have been "tormented" over these issues or you are losing the argument and have to resort to that kind of language to defend your position. Pity! Its a shame that you can't discuss this in a dignified manner without the foul mouth, but I suspect you've been getting quite a bit of "hate" e-mail and this is your way of retaliation.

CW should be a mode desired and not forced!

You are absolutely right there.

I had a no-code licence for 15 years, operating
mostly oscar and eme/meteoscatter on 144 MHz.

Now I'm learning code for my class-1 licence,
we need at least 13 WPM here in Germany.
I like the sound and rhythm of code now and
am quite enthusiastic!!

So-Just let everybody decide for or against cw...
it should not be an obstacle for hams...

Your radio is suffering from a lack of smoke. It obviously has all leaked out and needs to be replaced.

Take any othe piece of CB equpment designed for 12 volts and plug the connections into the wall outlet. It should produce plenty of smoke which you can carefully blow into the other equipment which should make things just great.

When you get your new lineer be sure to leave the voltage selector at 110-125 and plug it into the 220 V outlet. That will provide you with a real large power boost!

Of course HalTek in Mountain View was previously HSC which sold it and then couldn't compete for a while. They were at one time the other side of Bayshore on a dirt road where the high priced real estate is now and the large theater comlex and some industrial buildings. When the time period ended, they opened HalTed which has become HSC.

Alltronics out in the area where 101, 880 and 327 form a triangle is also a good place to go if you're interested in surplus stuff.

Same problem(potting compound), wrong VCO. The service
bulletins you listed cover VCO-5. His problem is VCO-1 on
the RF unit.

Check the VCO(#1) for black potting compound and corroded
components. Pick out the compounds and replace the corroded
components. Re-align.

I have a neighbor (a fellow ham friend) 2 houses away that has problems with my 40 meter CW transmissions. Three times he has had the cable company come over to is house to "fix" his problem. He also
mentions that one of the cable station's audio is at the same frequency as the air distress band.

I have one of these too. I installed the software that comes with it, but it is pretty lousy for editing images. I access the camera from Adobe Photoshop which brings up the camera software just long enough for the download and then immediately goes back to Photoshop. Never had a lockup problem.

Your analogy is incorrect and irrelevant. Hams are not flying airplanes,
or doing anything as important. Ham radio is a HOBBY! The only reason
there is a morse code requirement is in the beginning hams were required
to know morse code so they could recognize and not interfere with
military and commercial morse code, as stated by the fcc, thoe ones who
make the rules. No other reason. All the other dogma is based on
falsehoods purposely crafted to control the kinds and numbers of people
able to participate in the hobby, and using cw in this aspect has been a
total failure. Self policing is a much better method, especially now
with a stronger fcc.

If you cant dont

Hummmm, Thats pretty unusual for an icom to do that much. Cleanly at
least. I guess if the ALC was still functioning it could be ok, but I'd
be leary. I did the same on mine as far as qrp setting, except I put
mine at 4 watts min. On my 730, if I turned the power up to the point
where the alc was not indicating a deflection, the distortion was so
bad, I could actually hear it quite plainly. Really nasty sounding. Once
you turned the power down a notch to the point the alc kicks in, it
would instantly clean up. Almost day and night difference.
Do you show any ALC deflection at 150w? I'm assumming the 735 is like
the 730 in that the more you turn the power down, the more ALC
deflection you see on the meter. I think backwards from the normal
kenood. If you see deflection, you should be ok as far as the real nasty
stuff, but I'd still be a bit nervious running 150w. Also, would be hard
to tell on the air from 100 w. But, it's your rig, I'm sure you have
probably put it on a scope to check. I guess anyway...g MK

> Anyone using TenTec's new Pegasus "computer radio?" I'd be interested
> in any comments, particularly how good the filters are - I live in a
> noisy location - ease of set-up, use, etc.

I tried out a Pegasus and ended up returning it under the 30 day trial. It's not a bad $900 radio, but it is not a $2,000 radio. My Icom IC-756 is much better in terms of noise reduction and user interface.

The narrowest filter available on the Pegasus is 300 Hz. I'm not sure how that is measured (-6 db points, or what). I would have preferred something narrower.

The radio has a noise reduction setting. It can only be on or off, there aren't levels of noise reduction. It helped a little but wasn't the drastic improvement of the noise reduction on the 756. The Pegasus does not have a noise blanker. I found the notch filter ineffective. On the 756, you could hear a tone, click the notch filter and the tone was gone, except for the indication on the S-meter. On the Pegasus, the tone could still be heard.

The AGC on the radio has 3 settings, slow, medium and fast. If you have any kind of random static crashes, the slow setting is pretty unusable as the recovery time is very long (on the order of 3 or 5 seconds).

The radio does not have a jack for an external speaker. The speaker is mounted on the top of the cabinet which isn't very practical as the case is taller than most radios so the speaker is already above ear level and firing up (great if you listen from the ceiling). There is a spare jack on the back of the radio but that can't be used for the speaker as there are two separate grounds, one for the logic board (with the speaker) and one for the RF board (with the spare jack).

There is no speech processor or other mic equalization option for SSB transmit. You can apply different filters to the transmit signal, but that is all. The radio won't transmit AM at all. The instructions said that the FM deviation was preset and that the mic gain was just for SSB, but on a couple of FM contacts, the other station reported that my signal was better when I cranked up the mic gain. There is no ALC meter, only a LED on the front. You are supposed to adjust the mic gain just until the LED flickers, but I found that very difficult to do and ended up adjusting the mic gain for max power.

The radio is easy to set up. Just supply 12 VDC @20A, an antenna (there is only one antenna connection) and a ground. The radio has a 25A fuse in the rear panel, so you don't need a fuse in the power cable. The radio doesn't use the somewhat standard power connector used on most Japanese radios. The computer connection is a standard DB-9 and a cable is provided.

The software is a 16-bit Windows program so it will run on Windows 3.11 as well as 95/98/NT. The installation of the software is straightforward. You select COM1,2,3 or 4 in the program setup. I found that the software was a little awkward. For example, mic gain and RF power output are not on the main display, but on a pop-up configuration dialog. The program uses the MDI interface (where all the pop up windows are inside a common window - i.e. the old-style Word inteface). An SDI interface would have made it easier to move the windows around the screen to make it a little easier to get at the desired settings when they aren't on the main screen.

The radio does not have an antenna tuner and it doesn't come with any microphone.

There is a CW keyer, but no memory keying. For CW, the only mode of operation is full break-in QSK. There is no PTT mode or semi-break in keying. There is only one key jack. It can be used for either a straight key or keyer or paddles for the interal keyer. However, you have to change a software setting to tell the radio what is plugged in. There is no option to reverse the operation of the paddles (i.e. switch dit and dah).

The thing that attracted me to the radio in the first place was the fact that the radio has provisions for downloading new software to the DSP chip that really is the radio. This would allow someone to develop new DSP software to customize the radio for specific purposes. TenTec uses this capability to update the DSP software of the Pegasus' in the field. However, TenTec is not releasing the specifications for developing your own DSP software.

Lastly, I found that the computer as the only interface is cumbersome. I didn't really like firing up the computer just to use the radio for CW or phone.

Maybe I've used conventional radios for too long, but I'd rather turn knobs than run a mouse. I did get the external tuning knob, but I found that that had some glitches. It also appeared to be cheaply made, especially for a $139 option that still used the computer to process the input. The tuning knob had a good feel, but the adjacent buttons felt very cheap, not as nice as the keys on a $10 computer keyboard. The knob action is decoded by the computer program so if you are running other programs (such as a PSK program) on a slower computer, tuning response on the radio can be sluggish.

73,
Mark

I dont know what a dummy load is?
WHich wire does it hook to? The black one that plugs into the wall or
the brown one connects the speekers? My dad says that i will get a shock
if I do that but I dont think he nows for sure cuz he is not a radio dood
like us.

Did this happen on all TV channels ? Was the picture affected ?

If the picture is not affected and the problem occurs on all channels,
then this is an audio break through directly into the audio system of
the TV.

Are there external speakers connected to the TV ? If so, disconnect
the external speaker wires from the TV and the interference is not
heard on the internal speaker, the problem is audio break through from
the speaker cables. If there are no external speakers, then most
likely, the interference comes through the power line and wrapping the
power cord around a ferrite bar should reduce that interference.

I suppose you want the CW test part of the Licensing for Pilots also?
How about, Since broadcast stations transmit and so do business', why
dont they do the test? As a matter of fact, Why dont they test your CW
skills when you renew your drivers license. After all some hams do
have HF rigs in there cars! I suspect that 20wpm while in gridlock
traffic would be a sufficient test!

CW should be a mode desired and not forced!

Just be happy that there is still a 5wpm to deal with. I wouldnt blame
the FCC for anything if they even concidered dropping code since it
would allow a lot more use of the hf band instead of it being an
unpopulated crap hole.

I want my damn code priviliges, But Im not going to force it on
someone else like some of these old timers that cant give it a rest.
They hold on to it like a toilet holds on to SH*T!! Both are useless
and only one is for entertainment purposes!

That is what CW is nowadays, Entertainment.
If anyone argues with that, Welcome to 1944.

> equipment?

Unfortunatly, thats fairly standard for the old swans. Pretty drifty.
I've heard of all kinds of fixes. Mostly entailing holding a stable temp
around the vfo compartment. All tube rigs of that era drift to an
extent. But many not near as bad as the swan. I have a set of old drake
twins, that are fairly stable once they warm up.
Most of the drift is caused by temp change. A real fix would be to
overhaul the vfo with up to date design and using modern temp
compensating caps etc. I've heard of some that wrap the vfo case in tin
foil to seal up. They say it helps..Even my TS-830 with the standard
internal vfo drift with temp, but not near as bad as the swans. On the
kenwood, it's very linear as far as temp change. Hold a stable temp, and
no drift at all. But hard to do in my shack with the A/C going off and
on. So I broke down and got the vfo-230 digi vfo. No more drift. MK

Sure! Go right ahead! In fact, let me know before you do because I
want to be there with my video camera to catch the results (should be at
least as entertaining as a Jacob's Ladder if you get the hookup right).

Then, after the local fire department has done their bit, you may want
to take up collecting bottle caps. It's a lot simpler than learning basic
electronics.

Oh no - the bugs are what lights up the tubes. If you let them out the amp won't work.

Your CB rig will work with this amp just fine if you first prep the rig. Preheat an oven to 450 deg. Rub the rig with olive oil. Put rig in the oven for 2 to 3 hours. No need to buy a new lineeeer.

Hi there. I am searching for some old electronic musical instruments and accessories from 1950-1990, BROKEN OK:

old synthesizers, keyboards, drum machines, sound modules, effects processors and any old patchable modular or analog synth, pieces or complete systems.

The more unusual, the better. I prefer items with lots of knobs and dials but will consider anything thats capable of making unusual sounds or modifying existing sounds in a unique way.

Moog, ARP, Roland, Sequential Circuits, Korg, Oberheim, Paia, Aries, Steiner Parker, Buchla, Serge, Polyfusion, Emu, Synton, EMS, EML Electrocomp, Mutron, Maestro, EH, Yamaha CS series, OR ANYTHING SIMILAR

If you have something I could be into, please email me privately and be sure to include price as well as condition. Thanks for your time and have a happy day!

Examples of items I am looking for:
Yamaha CS30 synthesizer with sequencer
Roland MKS-80 Super Jupiter
Pearl SY-1 Syncussion electronic drum module
Simmons SDS V electro drum brain
Simmons SDS7 Digital-Analog Drum System
Morenz-Perkes 1200
PMS Syntar
SMS Voice 400 & Digital Keyboard model 430
Electronic Dream Plant Spider

...and plenty of other stuff!

Yes, this is a fairly typical Channel 19 problem, pot in the radio.
What is unusual is that the dimwit owner didn't smoke it in time and
instead forfeited it to the bugs.

Don't throw the bugs or the bag out....put them into the new CB
"lineer" your dad's buying you and pass them on to the next dimwit.

Better yet, send the bugs, bag, burned up pot, to Mr. Hollingsworth at
the FCC and ask him how much your new lineer's worth.

Some have gambled on the wrong horse to base their entire self-worth on. They should have gone technical instead of mastering hand-twitching skills. Some have done both so will easily survive the coming changes.

By the way, toilet talk is counter-productive to your argument.

Try

http://members.tm.net/jjmcd/hamradio.htm

I use Microsoft Word in conjunction with different graphic
files and print out on a HP Deskjet Color Printer to either
glossy photo-stock paper or 80# paper. Then I use a paper
cutter to get 4 standard 3-1/2 x 5-1/2 QSL's per sheet.

Yes, HSC (HalTed) has some cool stuff. IMO, HalTeK in Mountain View is better, except for the lack of the spark-gap transmitter (Another version of which he can see on display inside Frys, though). Lots of cheeeep RF connectors.

How about neither -- Ham Radio was in trouble until they started lifting the code requirements.

And be careful who you insult (referring to the "no code CB whiners") - after all, they could be at the other end of the conversation on HF, code or not and get you call sign, remember who you are, and conveniently forget to send the QSL...

After all, with talk like that, people might think you have a bad attitude!

2159. FS: FT-1000 with all D mods

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-17 00:00:00 UTC
From: Larry Menzel <retire@rconnect.com>
Message-ID: <s86gbjdmeh6167@corp.supernews.com>
Source record: 88277

Excellent, up to date, FT1000. All "D" features have been added to this radio so it is, in fact, a 1000D. Serial # 2ixxxxx Additionally, has optional SSB and 500hz filter, and TCXO, and BPF-1. This is a suberb rig, with exceptional front end and adjacent signal rejection. You all know the features and long-time reputation of this radio. There is one very small blemish on the top upper left corner above the power switch. The paint is chipped on the plastic front panel in a chip about the size of a large pencil eraser. Previous owner, who bought this radio new, claims it happened on his way home from the store when the power cord was closed across the top of the box but I cannot verify this. It's a very small blemish.

I have just had this radio aligned and gone through by Burghards in Watertown. It's in perfect working condition. I have the orginal box, manual, and hand microphone.

$2500 insured and shipped CONUS

2160. Need help with FT100 Manual

Newsgroup: rec.radio.amateur.equipment

From: hansen@fredonia.edu
Message-ID: <85vmjnkgo1@nnrp1.deja.com>
Source record: 88278

Hi:
I am the guy that did the December QST article on how to build a direct frequency entry keypad for ICOM radios. I'd like to do the same thing for the Yaesu FT-100 to provide users of this radio with the capability to enter frequencies via keypad. To do this, I need the specs on how to set frequencies on the FT 100. My FT736 has this detailed in the manual, but it is very old and I'm concerned that the protocol may have changed since then. I'm looking for one of two things:

1. A URL that will provide this information (I used to know one, but it is no longer live.)

or

2. Someone who could scan these pages and e-mail them to me. Please contact me first, I don't want a dozen people to go to this effort on my behalf.

I'm also looking for someone who could beta-test the resulting keypad... preferably in the local western new york area.

Thanks for taking the time to read this. Please respond via e-mail to:

john@hansen.net

2162. New Internet PacketCluster Site

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-17 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <85vp1qmdj1@nnrp1.deja.com>
Source record: 88280

You are welcome to connect to the New Internet PacketCluster Site at
KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH.
Please enter your QTH in the form: Chicago IL or Oslo Norway so that we
will know where all our new friends are from! You will also be
reminded to SET/LOCATION, that is optional but recommended. If you
properly do set your location, then the cluster will calculate beam
headings for you to various prefixes. For HELP on these commands you
may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION -your call-

You can correct any errors using the SET commands.

For more information on PacketCluster including a Logon Tutorial and
Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will
monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions using software already a
part of Win95/98:

First connect to your ISP.
Click Start / Click Run
In the box enter: telnet 209.32.226.63
Click OK

You should now be connected to the KC0DJO cluster.

Enter your call. If it did not echo, then you will have to turn on
local echo. Click on Terminal / Preferences.. and check Local Echo and
then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C
HELP

Message-ID: <3883601C.40BDC4@usa.alcatel.com>
Source record: 88283

Randy,

I don't think they're rated conservatively for anything except dissipation. In particular, I think if you look at 3rd order intermod, you'll see they're running right on the edge of 30 dB down already, and a 6 dB increase in power will give almost a 10 dB increase in IM, with results you can hear. Electronics manufacturers do NOT spend a nickel (or 6 Yen) if they can avoid it, and this includes cost-reducing what should be conservative designs.

If you are correct, we are all ahead of the game, of course, so I'll not complain!

Cortland
(ka5s@saber.net)

<snip>
It only takes a few bad operators to spoil it for the greater number of good operators. It is for this very reason that great concern is paid to ensuring that only good operators be given access to any 2-way hobby radio spectrum (in this case - Ham Radio). CB has unlimited access. There is no way to filter out the bad operators from accessing it. The end results are not pleasant (as you have stated).

Ham Radio has made feeble attempts to filter out bad operators. The only access requirement being a small display of commitment on the part of the applicant. I concede that neither the written nor the code requirements, of them selves, ensure any standard of operator behavior. These tests only show that the applicant has some minimal level personnel investment (the time and effort spent preparing for the test) going into the hobby.

It is human nature to show more respect for a possession (access to Ham Radio in this case) if you have to work for it than if it is given to you for free. The investment / effort required to gain a Ham ticket keeps it from being free and hopefully improves the odds that the applicant will respect the privilege a little more than they respect dirt. If the amount of work required to gain access becomes too great, and serves as a deterrent to even the best candidates, then it is no longer helping the situation. If the nature of the investment is unrelated to Ham radio (say, a requirement of jumping through circus hoops), then again it is no longer helping the situation. I am not convinced that these are the case here. I think simple sloth and greed are at work.

For decades, the written exam has ceased functioning in the personnel investment capacity. The content of the tests have been watered down sufficiently that any applicant can burp their way through it while picking their nose. The proof of this is the total silence on the part of the non-ham public demanding the written tests be relaxed. At the same time, a huge outcry was been rising for decades to relax the code requirement. The code requirement was the only stumbling block to gaining access to Ham radio without making a personnel investment in time and effort.

Now that the code requirement has been neutered, and is soon to be repealed all together, it is reasonable to suspect that the nature of life on the Ham bands will follow in the footsteps of CB.

> <snip>
>

> The CB was my first introduction to 2-way radio,
> then 11 meter. Now I want to move up. Does that make me a bad guy ....

<snip>

Am I correct in interpreting your statement to say that you started out in CB and then progressed into illegal operation on and around 11m using illegally modified equipment? Is this a confession that you donï¿½t feel constrained by the rule of the law let alone the rules of common courtesy? If so, then yes, this makes you a bad guy. I would have every expectation that you will translate your illegal behaviors onto the Ham bands.

By the way, just why do you think moving onto the Ham bands is moving up? What do they have to offer you that CB and 11m donï¿½t? If itï¿½s the nature of the operators there, and soon enough, their nature may becomes indistinguishable from the place you just left, then whatï¿½s the gain?

I've noticed that on motoroloa's website they claim that some of their radios are "intrinsically safe" - meaning waterproof. That is a HUGE plus. I'm going to see if I can find a dealer locally that will let me try some of the Motorola radios out. I'm not sure how the "Nifty factor" of business radios will compare to some of the mainstream ham radios but that might not be such a big deal if I get superior functionality. I'd be curious if I could get automatic repeater shifts and whatnot....

From: pstever@sympatico.ca
Message-ID: <3882a0ce.46955000@news1.on.sympatico.ca>
Source record: 88330

I'm working on a TS-440S rig which has a PLL problem. What happens is that my frequency display will blank out on all frequencies above 21.999 Mhz. All receive and transmit functions cease.

I have a service manual and an oscilloscope and wonder if some one has had this problem before and can give me some ideas. I've been checking a few test points and noted some signals as well as the absence of some where there ought to be some! One of the biggest problems I find is being able to actually get onto some of the test points!

Any ideas would be appreciated.

Thanks....

Actually, Radio Shack didn't create the FRS, they revived something
that has existed since 1947. In the old days, the FRS was called
"Class A Citizen's Band". It had kind of gone into a state of non-use
because darn near no one knew it even existed. Have to give Tandy and,
to a lesser extent, Motorola, for reviving it.

It is a mis-conception that "Intrinsically Safe" means a Motorola Radio is "Water Proof". To say that a radio or pager is Intrinsically Safe means that the radio can be used in an explosive environment so long as you use a Mercury (non-rechargeable) Battery. You can soak a Motorola Radio and get it wet in side the case. For a Motorola Radio to be water proof, it would have to meet Marine-Maritime standards. Marilyn Hartley, Retired owner Hart-Comm.

Source record: 88335

Hello,

Actually "intrinsically safe" does not mean waterproof. It refers to the radio's ability to operate in potentially hazardous or explosive environments without causing an explosion due its own internal heating or arcing such as from the battery contacts. The are many levels of these ratings from different agencies like UL or Factory Mutual. If you would like a detailed list of all these, I can forward a copy of them.

I may have the best of both worlds----a Motorola AP-50. Its front panel programable, has gaskets for waterproofing, offsets, and has both PL and DPL. It's generally only available in the Far East however where Motorola has catered to the Amateur Market. The radio is somewhat similar to a SP-50 with tone/freq pad on the front.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

hi
i have a brand new hp laserjet 2100 printer that i would be willing to trade
for an icom pcr-1000 or similar radio.
the printer is 1200x1200dpi/10ppm/4mb ram/5-8000 pages per toner.worth
$1000.00 plus tax.
willing to do this trade within canada only.
i would also consider a base or handheld radio that has the same scanning
specs as the pcr-1000.
usb/lsb is a must.
if you have something that you think i might be interested in let me know at
the following address:
kbg1@sprint.ca
regards

I have a simple question... Please give a simple answer... What is generally conceded to be the best / highest quality transciever for the money? I'm talking under $500.00.

Thanks!

2206. I have a TM-D700A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: Jim <Jimr@gallatinriver.net>
Message-ID: <3884D75F.23A85882@gallatinriver.net>
Source record: 88052

Here is what I like about it and don't like.
Like:
All buttons are lighted so you can see them at night except tuning knob
and volume and squelch knobs, which is not a problem.
All controls have a better feel including volume and squelch.
It has better audio on transmit and receive than the TM-7VA.
The display is a bit bigger and I like the amber better than the blue.
It will receive 800 mhz well as well as am civilian aircraft freqs.
It just takes a straight serial cable [female ended DB-9] to program it
and the program is on the Kenwood ftp site.
It seems to be very good against intermod.
Dislikes:
The scan of memory channels is different, what Kenwood calls
progressive. In other words it will scan all unlocked memory channels
from
1- 200 if so desired from either the vhf or uhf side provided the freq
of the channels are covered by that band. For instance it will not scan
am aircraft from uhf side as that freq. range is not covered by that
band.
So to get around this to a more conventional scan of vhf freq on the vhf
side[band a} and uhf freq[band b] you can use the group scan.
Group scan allows 20 memory channels at a time to be scanned.
So you must program 1-20 with vhf freq. and 21-40 with uhf freq or
what ever arrangement you want of the 200 memory channels.
If you are scanning on one band and talking on the other band every time
you key
up the scanning stops until you unkey
then it resumes.
Uhf am sensitivity seems very poor at least at 269.200.
Still not as user friendly as I would like, such as having to access the
new menu system, which is somewhat easier the the 7va, to lockout or
unlock a memory channel.
All things considered it has the most features in its class and will
mount in my car as I want,yes the head is
flat on back for velcro mounting.
I have not got into the data functions yet and don't intend to.
First radio I have had with 2 instruction manuals, voice stuff and data
stuff.
The above are my opinions and observations and I have no affiliation
with any manufacturer of radio equipment.

2207. FS; New rack cabinet

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: toneri@home.com
Message-ID: <3884d581.2376976@news>
Source record: 88053

For Sale: New, never used rack cabinet. Ideal for that bigger home brew project, repeater site cabinet, or for mounting your equipment in. Takes standard 19 inch panels. Cabinet is approsimately 4 feet high, 24 inches wide and about 26 inches deep. The mounting rails inside are fully adjustable and there is a locking, ventilated rear door. I have all the hardware except the key for the rear door. Asking $100. Can deliver in the Toronto, Ontario area but prefer pickup or maybe we can make some other arrangement for delivery.

2208. FS; 2 volt 75 AH flooded cells

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: toneri@home.com
Message-ID: <3884d770.2872261@news>
Source record: 88054

For Sale:

I have a quantity of 2 volt 75 ampere hour flooded cells available. They were removed from service as a backup power supply after only one year of service. All are up to full capacity. Each cell is approximately 15 x 4 1/2 x 7 1/2 inches and weigh about 20 pounds each. 6 cells in series will make a great 12 volt 75 Ah battery. These cells have a normal service life of 8 to 10 years but will usually last longer. Also included are the bars to connect the cells together and protective covers for the bars.
Can deliver in the Toronto, Canada area or you can pick them up or make other arrangements,

Asking $20 CDN per cell

Mike VE3FGU

Laughing my ass off, Gary. Nice job on the new VEC testing pool. I
knew they could find a way to dumb down the written.
Now, W5YI, ARRL, and Gordon can all get more $$$ since
EVERYONE will need to buy the test answers before sitting for the
exam. Kinda like scoring 600 on the SAT if you can manage to
get your name bubbled in correctly!

Dear NG,

The following is a list of the current prices for some of our
products. These are all Brand New.

Ham Radio

Patcomm PC-9000 HF + 6 Meter Transceiver----------$775.00

Patcomm PC-16000A HF Delux HF Transceiver (DSP, Built-in Keyboard
Interface, All-Mode, 100 watts, Built-in CW/RTTY Decoder and Encoder
(TX).----------$1699.00

Both products include 1 year Manufacture Parts/Labor warranty.

We will be soon adding some commercial antennas within the next few
days or so.

Computer Products

Intel Pentium II 450MHz CPU----------$178.79
AMD Athlon K7-500MHz CPU----------$224.39
Intel Pentium III 500MHz CPU----------$268.99
AMD Athlon K7-550MHz CPU----------$307.69
AMD Athlon K7-600MHz CPU----------$457.69
Intel Pentium III 600MHz CPU----------$480.49
AMD Athlon K7-650MHz CPU----------$551.69
AMD Athlon K7-700MHz CPU----------$725.99

Western Digital 6.4GB IDE Hard Drive--------$120.99
Western Digital 8.4GB IDE Hard Drive--------$127.99
Seagate 38420A 8.4GB IDE Hard Drive----$131.89
Western Digital 10GB IDE Hard Drive--------$136.74
Western Digital 13GB IDE Hard Drive--------$145.59

Many more deals!

So, please visit our website for more info on the above products.

Go to:

http://magelectronics.8m.com

Here is an Incentive to upgrade to General Class License or higher!

We will give the following discounts to Novice, Technician No-Code and
Technician Plus Class Licensees who upgrade on or before 04/01/2000 to

General Class or Higher!

Patcomm PC-9000 $25.00 OFF!!!

Patcomm PC-16000A $150.00 OFF!!!

Offer only good through 04/15/2000!

Dear colleagues
usually deep into heavy boatanchors I have a nice brown leather tube
Zenith T.O. which lacks the light brown log book cover (light grey on
the standard black 600 series).
Any offer for such a thing is considered, please mail your offer to
<hb9aik@yahoo.com>. Yes, I know they are rare but I keep on trying...
Thanks for any answer!
Ulrich.

That really is a SIMPLE question. Now, if we knew whether you were interested in VHF, UHF, HF, RTTY, AM, CW, SSB, Digital modes, CB, Amateur Radio; the list could go on and on before you can get a SIMPLE answer.

THAT *myth* is rapidly becoming an upper-level old wives tale!

As much as SOME love to quote such folklore as "truth", we have YET to see a SINGLE instance or actual call letter attached to such claims - will YOU be first?

This is not to say that such incidents DON'T happen - merely that it is FAR more rare than those looking for support of eased exams would LIKE us to think... Hell - SOME here would love to suggest that nearly ALL general or higher class licensees obtained their certificates by fraud - guess it makes THEM feel better when THEY can't pass legitimately themselves...

Greetings Al. I have a Kenwood TS-50 that I have used for at least the last four years and have absolutely no complaints with it. I use it both at home and on the road in my motor home. I have received many compliments regarding the audio quality of my transmitted signal and have no complaints regarding the receive audio quality. Using the "menus" to select some of the many options is a very slight annoyance, but I must underline the "very slight". It is only an annoyance since I don't use many of the options but when I want to, I have to revert back to the manual to look up the procedure. In some of the other brands, the use of multiple switches and knobs select these options, the TS-50 uses the built in computer. As for durability, this rig is usually carried in an overhead compartment with no extra padding or protection. After two trips across the U.S., it is still functioning flawlessly. One could deduce from this that either (a) the rig is in fact, well built and durable or (b) I am one lucky sob who is in for a well deserved rig failure ;-}. At any rate, in my never to be humble opinion, this rig sounds like it would fit your requirements. I have seen them offered from time to time on the used market, but then, as you know, you take your chances on how the rig was treated. (They might be like me!) Good luck, and good DX. 73,s Bob, W6JRF

OK...this unit was up on eBay but no takers...here it is...available for sale for $325 firm plus shipping.

I will use iEscrow for the transaction which allows you to pay by credit card and validate the merchandise before releasing payment. for more information see <http://www.iescrow.com/>

If it doesn't sell now, I'll just hang on to it...

Here is the OLD eBay listing for you to reference for information and photos:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=237092403

NOTE: Just to be clear...This is NO LONGER UP FOR AUCTION. THE AUCTION HAS ENDED. IT IS NOW FOR SALE OUTRIGHT.

Here is a link for information about mods (none have been performed on the radio):

http://ocpapsych.com/ft51mod.htm

This is an excellent radio. All original packaging and equipment. First $325 plus shipping via iEscrow takes it.

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot.

Stock up now!

Don't miss out on this one! Only 22 hours left to bid!

I am a newbe to HF and want a good all around antenna for DX work on
10,20,40 and maybe 80 meter bands. I do not have a tower yet so a beam is
not practical. I am interested in hearing opinions on various verticals
that could be ground mounted or on a simple pole beside my house. I have
a Yaesu FT-902DM rig so I am ready to go except the antenna.
I looked at the GAP antennas but would like to have something that will
handle 1kw+ for future use as I upgrade and get a HF amp.

I am open to any suggestions.

Please email me at blueglow@mindspring.com

Thanks,
Mark

LM,

I have owned both and sold the VX-1r. The Q7a is a much better radio. It is more sensitive, covers a greater frequency rx range, has a better memory scheme and is easier to operate in general. I recommend the Q7a over the VX-1r.

Good luck,

Jim...

2237. help with radio interference/jerks

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: Scott Mcphee <hyphae@email.msn.com>
Message-ID: <O$eap1hY$GA.257@cpmsnbbsa03>
Source record: 88083

I have a couple of really annoying guys in the area that are, presumably illegally, broadcasting so that it is under the normal commercial radio channels. It is getting _VERY ANNOYING_, and the frequency at which it occurs in increasing. I have no idea if anyone can help me here, but I know nothing about the technical aspects of radio. Could someone point me to somewhere/someone that can help me track them down?

I have begun to record their talking/whistling/playing music. It seems to only a couple jerks doing this. Is the whistling some sort of sign? They also repeat adio over and over.

Thank you for any help.

Scott

Try a search on Pixie-2 or variations on that theme. I believe several companies produce a small XCVR as you have described and "Pixie-2" is one of the more common.

Being Auctioned on Ebay!!!!

The RH256 is a sixteen-channel 12V land mobile transceiver that operates in the VHF frequency range (150 - 174 Mhz). This radio can store up to sixteen user programmable channels and has CTSS tone and scanning capabilities. It's output power is 25W. The radio includes a monitor switch and night/day switch. This unit was purchased from Comtronix, Indianapolis, IA and optimized for frequencies in the range of 154 - 165 Mhz. This unit has seen little use and is in good condition.

I have a TS-440 that I gave to my son years ago and now have gotten it back because it apears the VCO's have went out because it only has dots instead of numbers in the display. He checked and they wanted $350.00 to fix and that is why I got it back. Anyone needing it for parts or to fix make me an reasonal offer and include shipping from central TX.

No, I'm not a troll. This is honestly bothering me greatly. It's really annoying to try to listin to a program over somebody whistling and whooping it up. Today I was treated to "Dude looks like a lady" being blasted with their bad sounding equipment.

Your post has been very helpful.

Do you know if it is possibly my antenna (though I cannot think why that would be?!)? Is what they are doing illegal? Any hope for getting rid of them??

Kind regards,

Scott

I have beat mine up in the mobile (including dropping it one time) since 1994. Absolutely no problems. I notice that you say "portable". Like most modern PLL rigs it draws a couple of amps on receive, so might not be so good for small battery portable type operation. But if you have a plug nearby...go for it.

Hi Gang,

I acquired one of these old Bird wattmeters (also known as the ME-11U) but, it came without the diode holder and dummy plug. I would appreciate any information about how I might find these parts (preferably with the attached chain). Do I need to write to Bird directly? Please Email me as I do not check newsgroups on a regular basis. Thanks.

Radio Randy

Vertical antennas just don't cut it for DX. Yes you can get some signal out there but if there is any noise or QRM you might as well shut off the rig as far as DX goes.

You would be far better off putting up a wire dipole that could operate on a couple of bands.

But don't take my word for it. Listen on the band and take notes. Notice who has the readable signals from any distance, and see what antennas they use.

If you insist on a vertical antenna, spend a major amount of time and effort on the ground system. It needs to be very good for the antenna to work well. Which antenna you use is immaterial, but the commercial ones are overpriced all out of proportion to what you are getting. In particular I am amazed at what those Cushcraft vertical antennas sell for. I know aluminum isn't cheap but those antennas are way too expensive.

I just built a two element yagi for 12 and 17 meters. It didn't cost a lot but works great and is capable of serious DX operation. It handles all the power you can legally give it, and isn't all that large. Actually many have asked me to build them more of these and I'm considering it. But that means I will be in the ham radio business, not sure I really want to do that.

My main antenna is an old Hy-Gain triband yagi. I have worked well over 200 countries with it and consistently break through pileups, sometimes without my amplifier. Tonight I worked XZ0A DXpedition, first call through the pileup. Worked Philippines earlier on 10 meters, got great report. I could never even be heard with a vertical.

Some advice from an old timer who has been there. I wish you success, but hope you investigate before you commit to a vertical antenna.

73, Bob K6DDX

P.S. I have a Butternut vertical that I don't care for. I'd sell it reasonably but don't want to ship it.

2250. Re: help with radio interference/jerks

Source record: 88096

Group called Happy Flyers (Hams and Pilots) marketed, on a limited basis, a board kit, construction manual and operating manual for a phase detecting df unit.

I built up two for AM work in the late '70s and two for FM work two years ago. The AM unit is really simple to build and understand. They were used to locate some foulmouths in the San Jose area who were really obnoxious toward a fellow member's wife who worked swing shift at a local hospital emergency room and would use CB to keep in touch with her husband on her way home.

The units light up LEDs to tell you the direction to turn the dual 1/4-wave antenna array to capture the null and a 50-0-50 microammeter to fine tune the remaining 5 degrees either side of null. The accuracy is ONE DEGREE!

The FM unit contains a built-in automatic attenuator section to pull the radio audio out of saturation by 60 dB. This is more than adequate for use with 1/4-wave antennas on the array bar which can be replaced with stubby ducks on BNC connectors when the signal gets to be too strong for the auto-attenuator to handle with the 1/4-wave antennas.

Board set sold for about 10.00 in '79 and last sets I bought in late '80 were about 15.00 or so.

Try to locate Hart Postlethwaite, WB6CQW [I think] in the San Carlos, California area. He may still have some kits or be able to direct you to someone who does.

2251. Hannes Bauer turtle-back keyer paddle?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <38856BB7.B8B3F543@usa.alcatel.com>
Source record: 88097

Some years ago, at the Wiesbaden ARC hamfest flea market -- should I say

"Flohmarkt?" -- I picked up a single-lever paddle of unusual design. It sits under a heavy steel casting, roughly triangular, about 4 inches on a side with three mounting feet, painted in a green flecked paint. The keyer itself is on a red plastic block bolted inside this casting, made in three pieces, two levers and a brass block to which the levers, one for dash, one for dot, are attached and buffered by springs. Contacts are mounted to the rear of this. The actual paddle is an asymmetrical red plastic piece sticking up from the external part of the movable assembly. Looks a like a turtle with a paddle sticking out instead of its head.

I can e-mail JPEG's of this to anyone who might be able to help on it. In all these years I haven't used this, and I think I'll see how it sounds on the air. But I'd like to know WHAT I have!

Butch,

Buy the filters! The DSP-100 does work pretty well on the digital modes,
but doesn't do too much for the SSB side of the radio.

Hi Larry,

I love mine!! I have had it since April 1995, use it nearly every weekend (it's on sometimes all weekend, even though I may be in the shack a few hours a day) and it has never missed a beat....there are very few drawbacks to the rig, but here are the big ones:

1. CW filter can only be used in CW mode (you can work "split" if you want to use the filter for RTTY, Pactor, etc--it is a little touchy and you have to get used to it)

2. No auto antenna tuner, so if you like to work both CW and SSB and have a limited bandwidth antenna like a multiband vertical, you may want to invest in a good "manual" tuner--I bought a used Ten Tec and it works great.

3. Need to buy FM unit (for 10M FM), CW filter (a must if you work CW or digital modes) and AM filter if you like to listen to AM/Shortwave broadcasts. Each of these is about $100 each. I have the FM unit and the CW filter, but have never bought the wide-band AM Filter since I rarely listen to AM/Shortwave broadcast.

I have used this rig mobile and used it to contest on CW/SSB/RTTY and have been extremely pleased.

73,

Mike K3FH

I have a nice Collins KWM-1 transceiver, I bought it from a friend. It has no 516F-1 power supply. No modifications, and original paint, and knobs. The front panel is very nice Serial Number 1007. The interior is also nice. The paint is still very shinny, and looks great. The transceiver is untested, and has a RP Electronics RPC-3U Speech Processor made for the KWM-1, with manual...$750.00 plus shipping

2271. Yaesu FT-2600M possible firmware bugs

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: gkd@ernie.WPI.EDU
Message-ID: <861g6m$bf0$1@bigboote.WPI.EDU>
Source record: 88162

My Yaesu FT-2600M (s/n 9G0306xx) appears to have a couple of minor firmware bugs which can cause some odd behavior with its memories. I don't know if all 2600's are affected, but my rig is newly purchased (the hot microphone "fix" was already implemented). Fortunately, the bugs are pretty easy to live with once one becomes aware of them. They symptoms are described below.

1) Direct Memory Recall from Microphone: Entering a memory channel number followed by "*" allows one to directly jump to that memory channel (e.g. enter 5* to go to memory channel 5). This works as described in the manual (pg. 33) unless (A) the rig is already in memory mode, and (B) the memory channel has been changed using the rotary tuning knob or the microphone up/down buttons (which includes memory scanning). Entering 5* (for example) will then cause the contents of the current memory channel to be copied into memory channel 5, overwriting channel 5's original contents. My solution is to simply avoid using the Direct Memory Recall option while in the memory mode.

2) Priority revert feature (pg. 41 in manual): When in the priority channel monitoring mode (pg. 40 in manual), the priority revert feature (menu item #24) is used to automatically cause the rig to transmit on the priority channel (channel #1) whenever the mic is keyed. However, if the priority revert feature is left in the "on" position when the priority monitoring mode is not in use, strange things happen. In the memory mode, keying the mic will cause the rig to get locked on memory channel #1. Turning the main dial will cycle through the programmed alpha-tags, but will not change frequency. Similar behavior occurrs when the mic is keyed in the VFO mode as well. Cycling the power switch and then turning off the priority revert feature clears this condition. (Reversing these two steps may cause one of the memory channels may be overwritten.)

You know it would be interesting to take a poll of all hams anonomously to find out how many 'cheated' to get where they are. I know many Extras here in Maine that have cheated the system with waivers and some that cheated on the 5 wpm test because the team used the same tape over and over every session. One man was on the repeaters asking if you could get a waiver for the 5 wpm and whiningbout his ears had problems and the next month he was an Extra and he doesn't know an E from a T, but he got his waiver!

Amen to the typing test. Almost 99% of my contacts are PSK31 where the majority of the folks I contact are over the age of 60. They may be great CW Hams but they sure do suck typing hi hi No offense.
Times are changing folks get with it.
And yes I did pass my General Theory last weekend but failed on the 13 WPM. I am working on it though... Just as a matter of pride.

Well, to be really pedantic, with the apostrophe it surely means it is
possessive and not plural. Therefore, 73's would mean "belonging to
best wishes". Quite nonscencical.

All,

As a newbie to Amateur radio (I got my Technician ticket in November)
please allow me to add my two cents to this discussion.

I am 30 years old and I have been working as a Systems Engineer for a
computer company here in Texas.

I have always had an interest in Ham radio but never had the time to
dedicate to the hobby and frankly Morse didn't really float my boat.

My original intentions were to get the Tech class and stay there but after I
got involved with a local Ham group, ARRL and the local Skywarn chapter I
have reconsidered.

This hobby is quite interesting and most importantly - challenging. I am
looking forward to getting my brain wrapped around radio theory, antenna
design, etc.

I would think that each license level is an entrance to the next level of
operation - a stepping stone to greater things. Learning new things is what
keeps your mind sharp and your spirit excited. I know that is how I feel.
I love talking with the "old timers" and learning from them.

Don't get so wrapped up in the politics of the FCC that you lose site of a
fun hobby!

Replies and advice can be sent to KD5ING@hotmail.com

Thanks,
Tim Lewallen

YEAH - yer right - half the Extras cheated with those fraudulant waivers - the REST found other ways to "cheat" their way into ham radio.... yeah, suuure - unh-huhhh - and of course, YOU *can* step forward with at LEAST a couple of names/calls since YOU know so "many" - will you name just *TWO*, complete with proof of their "fraud"?

I didn't THINK so!

Just ANOTHER full-of-crap BLOWHARD!

Sounds like pedantic semantics.... I understand the message, but shall *we*
all start griping about how *we* communicate now? Anyone get all hung up when
someone refers their single self as *we*? :) If you understand the intended
meaning of 73, 73s, 70 3rds, 73's, whatever, does the way someone says it
really matter?

NOTE: This is a new listing. If you contacted me before about another T/R switch, please contact me again; I've lost some email files.

Have just found (in a local estate I'm helping to liquidate) a VERY nice E.F. Johnson model 250-39 T/R switch. It is Collins-scale excellent cosmetically and electronically. It is complete, looks great, works great, and is ready to go. I can sell it for $145 + $5 to ship. Tks es 73!

2295. Info on European CW paddle?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <3884AF57.6AB96851@usa.alcatel.com>
Source record: 88186

Some years ago, at the Wiesbaden ARC hamfest flea market -- should I say "Flohmarkt?" -- I picked up a single-lever paddle of unusual design. It sits under a heavy steel casting, roughly triangular, about 4 inches on a side with three mounting feet, painted in a green flecked paint. The keyer itself is on a red plastic block bolted inside this casting, made in three pieces, two levers and a brass block to which the levers, one for dash, one for dot, are attached and buffered by springs. Contacts are mounted to the rear of this. The actual paddle is an asymmetrical red plastic piece sticking up from the external part of the movable assembly. Looks a like a turtle with a paddle sticking out instead of its head.

I can e-mail JPEG's of this to anyone who might be able to help on it. In all these years I haven't used this, and I think I'll see how it sounds on the air. But I'd like to know WHAT I have!

Your posting is "nonscencical", whatever that is. An apostrophe is
used to pluralize certain things, like figures - like 73.

From Webster's: "apostrophe - a mark used to indicate the omission
of letters or figures, the possessive case, or THE PLURAL OF LETTERS
OR FIGURES." (emphasis mine)

Worse than that, Kim. He's absolutely wrong. 73's is the absolute
correct way to pluralize 73. To believe otherwise is to be illiterate.

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

From: Rick Manns <rick@solcomguam.com>
Message-ID: <85va9s$581$1@brokaw.wa.com>
Source record: 88236

Thanks for help in advance,

I need the programming instructions for a Connect Systems, Inc. CS-700. I looked on the companies web site but they don't even mention that model (probably to old of a unit).

By the way. This unit will be connected to an Icom IC-28H and I have already interfaced this radio with other interconnects and controllers. If you would like a PDF file of connecting points for this radio let me know and I will email to anyone interested.

Rick - KB6IDK

PS: This radio is used for a project that is not governed by the laws of the FCC (outside the US), please don't lecture me on FCC rules and 2 meter automatic control, etc. - Again thanks for any help with the CS-700.

Is there a trick to getting a low band Syntor X9000 on 6 meters? The RSS I try will only let me enter a freq up to 53.000 mHz. Am I missing something??

Any help appreciated...

Thanks - David

2307. Optoelectronics M1 and Scout frequency counters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: tmelcon@mit.edu
Message-ID: <3883c323$0$22488@senator-bedfellow.mit.edu>
Source record: 88240

A few weeks ago, I posted a review of the Optoelectronics M1 frequency counter.

ERRATA

My previous post contained a few proofreading errors. The correct web site for Optoelectronics is http://www.optoelectronics.com. The A range is listed as being usable from 50 Hz to 40 Mhz.

The sensitivity specifications I listed were from the instruction manual. The specifications in the catalog are different:

frequencies(hz) range instructions catalog
1k-10M A < 30 mV < 20 mV
10M-40M A < 60 mV < 50 mV
10M B/Prescale < 10 mV < 10 mV
150M B/Prescale < 5 mV < 1 mV
800M B/Prescale < 7 mV < 7 mV
1G B/Prescale < 12 mV < 12 mV
2.4G B/Prescale < 100 mV
2.8G B/Prescale < 100 mV

COMMENTARY ON SCOUT

I have recently had the opportunity to also use a friend's Scout counter, and I would like to take this opportunity to comment on some of the salient differences between the two. The commentary contained herein assumes that you have read my previous article. This article is relatively brief, and addresses the differences between the Scout and the M1.

FEATURES OF SCOUT

The principal feature of the Scout is its ability to automatically tune certain supported scanners. It has a port which provides serial output in the same style as the M1, but which is also internally selectable to provide suitable signals for automatically ("reaction") tuning scanners to the detected frequency. Great for those sekrit-ninja espionage trips.

The Scout can provide vibration or beeps when a new signal is acquired. The M1 provides no indication if one is not looking at the screen.

The scout also provies a "charging" LED, which the M1 does not. Furthermore, it provides

DRAWBACKS OF SCOUT

The scout has only one range, which operates from 10 MHz to 1.4 GHz. It seems functionally equivalent to the M1's prescale range in terms of allowable gate times and decimal places. The scout acts like the M1 in capture mode, in that there is exactly one gate time (corresponding to 3 decimal places) available.

The scout cannot count low frequency signals. It also does not have available to it the greater precision and faster response of the M1's B range for signals below 150 MHz.

The memories, though more numerous than those of the M1, can be scrolled in only one direction. The scout's backlight, beep, and vibration can be enabled or disabled only when turning the counter on or off.

RECOMMENDATIONS

I would recommend purchasing the Scout (which costs $200 more than the M1 when not on sale, and about $100 more when on sale) only if one wants to take advantage of the automatic scanner tuning capabilities. The Scout seems to be a scannist-purposes-only frequency counter, with little utility as a benchtop meter, and a generally inferior feature set aside from the automatic scanner tuning.

2309. FA: Philips DC 777 Car Shortwave Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-18 00:00:00 UTC
From: D Bland <dwbland@my-deja.com>
Message-ID: <860qk7$ev5$1@nnrp1.deja.com>
Source record: 88242

On ebay at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?
ViewItem&item=240434020

Philips DC 777 Car Shortwave AM/FM Radio Cassette Player
Picks up Shortwave 90M-13M Continous
Autostore 5 strongest stations on AM/FM
20 SW Presets, 5 AM, 5 FM presets
Security Code Theft Deterrent
4 Channel line-out
High power 4 stage output with fader
Wonderful Cassette player
Autoreverse tape transport
Clock
Direct entry keypad

This great sounding unit ships in original box with manual (not
pictured), and all original mounting hardware and wiring. Unit is in
excellent shape. All LEDs work with the exception of two on the preset
indicator (not mission critical). LED's are not burnt out (press on the
face gently lights them up again). An electronically inclined
individual could repair this easily by soldering loose joints.
Note: Shortwave signals are more vulnerable to interference generated
by cars. For an additional $5 I will include two filters that will help
minimize interference. To test your car for interference, check how it
does on AM when driving at different speeds, w A/C on, wipers on, etc.
This will give you a rough idea of how the unit will perform in your
car.

If you wish to inspect the unit more closesly, please email me, and I
have much larger images I can email you.

Buyer pays Actual shipping and insurance, @ $5-$10. Money Order, or
IESCROW acceptable. Buyer pays escrow fees where applicable.

Sent via Deja.com http://www.deja.com/

The "upper end of 75M" is but a small portion of the Amateur HF allocation.
Why do you insist that it is the standard for all Ham Radio to be compared to?
That band is the exception to Ham radio and not the rule. I was listening on
75M just last night and turned it off after about 10 mins of sex jokes and
personal put downs to other ops so I see your point but don't judge all the
bands by those losers.

> equivalent and a 30 volt Eveready No. 413 or equivalent. As these, or
> comparable batteries still made?

Troyce-

I'm fairly sure you can get these batteries at Radio Shack, although the
No. 413 may have to be ordered.

It is possible that the No. 950 is just a size "N" carbon-zinc cell, that
can be replaced with any 1.5 volt size "N" you can find. Whatever its
size, I think a common replacement will be obvious once you find out.

These batteries are only used in the Ohm meter (resistance) portion of the
630. The No. 950 is used on the lower resistance ranges. The No. 413 may
only be used on the highest resistance range. The meter should function
normally on all other ranges even with no batteries installed.

YG-455SN-1
DVRU

I have original boxes for the TS-850, SP31, YK-88SN-1 and the YK-88CN-1. The other boxes are lost thru carelessness.....

Condition is very good to excellant.

Was used by a little old lady (BFB) who only talked to her neighbor (?). No, that was the truck, I think.

I am the original owner of this unit. It has not been bastardized to put it on 11 meters or "MARS". It is truly in factory condition. You want to break it, buy it!

I'd never thought of checking at Radio Shack. I figured they were probably
obsolete batteries that would be extremely hard to find, if at all.

>These batteries are only used in the Ohm meter (resistance) portion of the
>630. The No. 950 is used on the lower resistance ranges. The No. 413 may
>only be used on the highest resistance range. The meter should function

Yep, that's what the manual said they were used for. And I did check it
without the batteries, by checking voltage on some standard batteries, and
that part works fine.

> equivalent and a 30 volt Eveready No. 413 or equivalent. As these, or
> comparable batteries still made?

The 1.5 volt battery is an ordinary size D cell available from the
drugstore (alkaline is best). The 30 volt battery is available from
Triplett or a local electronics parts house. Maybe Radio Shack can
order it for you. Triplett is at www.triplett.com and the 30 volt
battery is order # 37-19. IIRC, these are the same batteries used
in the Simpson 260, also a fine instrument.

You can restore the panel lettering with a paintstick available at
most crafts shops.

2318. VHF/UHF base transceiver best buy ? (second hand)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-19 00:00:00 UTC
From: cglace@club-internet.fr
Message-ID: <1e4naz6.tbdkjo1phis64N%cglace@club-internet.fr>
Source record: 88001

Anyone could help me in selecting good base, second hand, all mode transceivers (one in 2 meter and one in the 70 cm band) on the following criteria:
- sensitivity
- spurious rejection
- intermod rejection
- PLL/osc noise
- audio/modulation quality
- and as for VFO design: no 2000 turns, nor 5 kHz steps to scan the hole SSB band!
These transceiver can be quite old ones (max 20 years), but with general coverage of 2 meter *and/or* 70 cm band, and 12.5 kHz NBFM step mandatory. Hi power output and internal mains power supply appreciated.

Are there internet pages comparing ham equipment?

I have come by a large length of what appears to be Belden 2668 cable. I can't find that cable type in any of my catalogs or in the Belden on-line catalog. What I have appears little used, with gray PVC covering, about 0.5" in diameter, is terminated on both ends with 37-pin Centronics-type male connectors, and is marked thus: "Belden AWM STYLE 2668." Can anyone tell me what this cable is used for, and how much it costs (I probably want to sell it to someone who can use it)? The cable also has an inspection tag from what appears to be a vendor (Kertech in MA) that refers to "Part # LC37(7S)PP." Thanks.

The short answer is that you wouldn't. You sound like you would be a welcome addition to HF. I hope now that the code is within your reach you will QSY down. As far as I am concerned, the code was never the real issue in this interminable debate. The real issue was and is raising and holding a high standard of behavior on HF (and elsewhere). Mistakenly many have thought CW tests could or should accomplish this. I don't think Elements 1(b) and 1(c) ever were very effective "filters." Maybe a few bad eggs were kept off HF as a result, but far more people who would do no harm or be assets to the bands were kept off. I am not one of those who thinks the sky is going to fall after April 15. What we need is more FCC enforcement. Tests may be good for ensuring operator safety and competence, but they are not any substitute for enforcement and strong peer-pressure when it comes to jamming, profanity, and other forms of OTA malice. The nastiness has been there for a number of years. Where did it come from? Enforcement fell off and so did standards of what is considered acceptable behavior. The mess has resulted from an indifferent regulatory agency and from good ops who take the bait and encourage jammers and that lot by responding to their taunts et al.

Try a homebrew G5RV dipole (don't get excited, it's easy). It's simply
a dipole cut for resonance on 20 meters but will resonate very well
anywhere between 80 - 10 meters. One of the AARL Antenna books can give
you detailed instructions. I substituted 450 ohm ladder line for the
300 ohm twin lead feed that they specified (SWR was a little higher, but
there was less signal loss altogether).
Remember, it does not have to be perfect, you just need to get a signal
out. Good Luck

Sounds like the stuff that we used to use for the LV controllers for stage lighting. The control console and the dimmer packs were set up with 27, 37,or 53 pin QC's, and the trusses where already pre-wired. all you had to do was get 220 to the trusses, and then daisy-chain the controller cables from the stage box to the trusses. A larger version of the control 'snake' was routed along with the audio snakes to front-of-house where it was QC'd to the lighting control console.

the small chunk I have here is silver-colored jacket with 34 pairs of 26-gauge solid core.

From: Mike <michaelj@networktel.net>
Message-ID: <Suwh4.134$VH3.35181@news1.atlantic.net>
Source record: 88032

dr d,

I am afraid that isn't the correct sequence. Even if you make the clear
the white. I can get the radio to key, but not with the mic operating. The
radio does work with a different mic set up, (the mic that works has thermal
sealed ends.) in tune up and cw.

You probably know this already good buddy, but you
will be negatory on the power output until you speak
or play some country-western music over yer microphone.

That being said, the first HTX-10 I picked up was DOA
in just this manner - a bad mic or amp stage
or something.

Rather than fix it from raw copper and silicon like a
true ham would, I had it replaced, and now
I'm exchanging 10-10 numbers with hams all over the world!

I'm still a real ham, though, since much to my friends' dismay,
I am actually conidering drilling holes in my brand new
Honda to upgrade from the wimp-ass mag mount ex-CB antenna
I use now.

Source record: 88101

If you're talking & working HF bands - you can't go wrong with the Kenwood TS-830S. $400 - $450 range with both CW filters. Hot receiver and excellent transmit audio - the RF speech processor is very effective. It's a hybrid - all solid state except for the transmitter driver and final tubes - you'll need to peak and tweak the preselector and final tune/load everytime you change frequency or band. No FM or AM modes or general coverage receiver.

It's a rig you can work on - not susceptible to ESD damage, don't have to worry about memory backup batteries, plastic trimmer capacitors, etc. The few "faults" it has are well documented and easily corrected.

If I could only have one rig and was limited to under $500, I would go with a TS-830S again.

NO Flames guys & gals. He asked for and I gave him my "simple" answer.

2356. Re: Motorola radios instead of KenYaeCom

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-19 00:00:00 UTC
From: lkaymill@aol.com
Message-ID: <20000118212101.03562.00000090@ng-bd1.aol.com>
Source record: 88105

I don't believe that the AP-50 will be listed on the Motorola Web Site, at least in the US. It was an Asian Market radio that as far as I know, has been discontinued. Mine came driectly from Asia. There was a West Coast Company that imported and sold them in previous years. Their ads were in Amateur Radio Trader and their name was something like Altran (sp--??)

Motorola or any of their dealers can supply a copy of their "Intrinsically Safe" profile for any radio. Information may be on their web site too, but as pointed out before, it does not mean waterproof or resistant. There were a few models made that could be dropped in water and still be tight. The more common ratings are for Mil Spec 810C however which refers to resistance to wind driven dust, moisture, vibration, etc.

2358. Triplett VOM Battery question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-19 00:00:00 UTC
From: twilson@nospam.ag-eco.tamu.edu
Message-ID: <8639l3$at2$1@news.tamu.edu>
Source record: 88107

I have a question. I'm wanting to restore my father's old Triplett Model 630 VOM. What I'm trying to find out is if the batteries it takes are still available. The manual says it needs two, a 1.5 vold Eveready No. 950 or equivalent and a 30 volt Eveready No. 413 or equivalent. As these, or comparable batteries still made? I'm not sure how old this meter is, though I suspect it's from the 50's at least, since I remember him using all throughout my childhood in the 60's and into the 70's, until he gave up his TV and radio repair practice.

John,
Check out All Electronics Corporation (1-800-826-5432 or www.allelectronics.com). They sell a male & female pair of these connectors attached to opposite ends of 10" jumper wires for $1.20 ea (1-9), $1.00 ea (10-99), $0.80 (100+). It is cat.# CON-20 on page 49 of their Winter 2000 catalog (.pdf version available on the web). There is no minimum purchase, but a $5 handling charge is added to all orders.

Note that these connectors do not contain the plastic locking tabs usually found on ham power cord connectors, but they still mate OK with the locking-type connectors. Also, the red and black wires on the jumpers are REVERSED, so you will need to extract the spade contacts from the plastic housing with a small jeweler's screwdriver or similar instrument and switch them around (not difficult). Then you can either cut the jumper in half and spice the appropriate end onto your existing wires, or remove the jumper wire entirely and solder directly to the spade contacts.

73,
Greg Doerschler

Hi Mark!

Good deal on the HF! You'll like it.

- I use a CB vertical on 10, 15 and 20 meters (for now) and I have managed some DX.

A CHEAP alternative for you to try might be the Solarcon A99 (or Antron 99). I think these are selling for around $40 mail order, are a snap to put together, have tuning rings at the BOTTOM of the antenna and seem to work well. This is a 1/2 wave vertical.

THEN, you can see if this will do it for your higher bands needs, while trying Bob's DIPOLE idea for 40m/80m to see how that works for you.

I know Bob and he is not blowing smoke - he KNOWS what he is talking about and any DXer would be jealous of his HUGE contact list/card file.

FTR, I am using an Alpha v58 (5/8th wave vertical) up about 15 feet off my single story homes roof. Using a Kenwood TS-820S (100 watts) and this antenna I was able to contact South Korea and Japan, not to mention Canada and the East coast regularly on 10 and 15 meters.

I've since sold off this rig (financiaal reasons) and am saving and looking for another presently.

Good luck and have fun! 73 - Ed - KF6YKM

From: Marty <martyk@naples.infi.net>
Message-ID: <3885B434.F5E5F798@naples.infi.net>
Source record: 88123

I'm looking for a symbol for a Variac (or Powerstat) that I can use in a

circuit schematic. If anyone has one they could scan for me, or knows

of a URL where I might find one to download, I'd appreciate it very
much.

I'm looking for the kind that shows the winding as a toroid, not the
straight autotransformer configuration.

TIA, Marty

Bob,

A well designed vertical is ideal for transmitting for DX. Low take off angles are everything for DX. I have a 33 foot tower with 32 random length radials that I load on 160 - 30 meters. Running 700 watts, I work all kinds of DX on 80, 40 , and 30 meters (100 watts on 30). I have 105 on 30, 150 on 40, 86 on 80, and 15 on 160 meters in the past 2 winters. During the past two evenings I worked EI, OM, HA, OE, 9H (CW), EA, LZ, G, ON, DL, HB, S5, and VP5 on SSB from Texas. I'm looking forward to putting up a taller tower so I can have a quarter wave on 80 meters and an eighth on 160.

What may be needed is a separate receive antenna such as a beverage or a loop since the vertical will pick up local QRM which tends to be vertically polarized. I don't have room for either on my little city lot, but that does not seem to be slowing me down too much.

Funny, I'll finish 5BDXCC on a low band vertical....

73 de Tom, K4NR/5

Bob wrote in message ...
>Vertical antennas just don't cut it for DX. Yes you can get some signal
out
>there but if there is any noise or QRM you might as well shut off the rig
as
>far as DX goes.

Hello to all...

Heathkit SB-line stuff for sale:

- Cabinet: no dents, has the usual chipping and scratches, would be nice with a repaint. $10.oo plus shipping

- SB-102 front panel: overall nice, has minor chipping on the top edge (where the lid closes onto it) and a "ring" worn into the paint from the DRIVER tune knob being too close to the panel. The knob hides the mark, however. This panel is good enough to replace a beat-up one or one that's been drilled. $10.oo plus shipping

- Knobs: I have a bunch of the smaller knobs (but no VFO knobs) available. Condition ranges from good to great. $1.oo each plus shipping

- Lever knobs: These are the onese used for CW filter selection and PA loading. $5.oo each plus shipping

- Panel meter: The face is "history", but the movement is guaranteer good. $5.oo plus shipping

2377. FS: TS-120, coupler, manuals, etc.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-19 00:00:00 UTC
From: k5by@aol.com
Message-ID: <20000119084625.03681.00000247@ng-fc1.aol.com>
Source record: 88126

FOR SALE:
* Kenwood TS-120 transceiver (with mike, power cable, and service manual)
* Yaesu FC-901 antenna coupler (with remote cable, remote reflected power meter, and instruction manual)
* Robot SSTV unit (no manual, but knobs and connectors are well marked)
* 100 watt dummy load
* Homemade mobile antenna coupler

In the TS-120, I discovered and corrected the frequency drift/jump problem common to this model and that was similar to the same problem which I found and fixed in a popular shipboard lifeboat radio model -- a ground wire lug for the I.F. was clamped between the PCB's ground foil and a nylon standoff insulator, a no-no. The rig now works FB. With above mobile coupler, worked Hawaii mobile on 20M with it, among other things. 100w SSB/CW, covering 80/75-40-20-15-10 (no "WARC" bands). Uses 12V/20A power.

The Yaesu coupler, 500 watt p.e.p. rated, 160M-10M, is beautifully, solidly made, inside and out, with lighted meters. I installed a remote keying pushbutton switch for ease of tuning.

Lighted remote reflected power meter sits on rig, if desired. Makes good modulation monitor, kicking upward whenever rig is overmodulated.

I got the beautifully-made Robot SSTV terminal device as part of a trade, but I never got around to using it. (I had seen one in operation at a hamfest one time.) Its condition is like new.

I built the air-cooled dummy load.

I built the mobile antenna coupler, with lighted meters and remote keying, to mount on inside wall of camper van, aligned with the antenna's base. I had put tiny motors on it for remote control tuning (on dashboard) of the capacitors, but I found reaching over my left shoulder and twisting the knobs was easier, faster.

REASON FOR SELLING:
My shack/office is a tiny room in my older mobilehome. When I went from an old portable computer with dot-matrix printer to a desktop with laser printer, something had to give, and it wasn't going to be my well-used 2M station, my weather station, or (needed for HF WX FAX) my shortwave receiver. Hi!

TERMS:
$500 for all, cash and carry from my Johnson Space Center area home.

Tnx es 73,
Bill, K5BY

> Thank you for any help.
>
> Scott

Scott,

From your description, it sounds like your radio is picking up CB radio transmissions in addition to the desired broadcast. This can be caused by a defect in the radio. Do you hear the interference on different radios? Do any of your neighbors experience the interference?

Assuming your radio is working properly, this interference is most likely caused by the CB operators running illegal power levels. It is unlikely that someone running at legal CB power levels would cause the interference you describe to a properly functioning radio.

I suggest you contact the broadcast station and explain your problem to someone there. They should be interested in making sure that their listeners can hear their broadcasts. After all, they want you to listen to them. You may also want to contact the government agency responsible for radio. In the US, that is the Federal Communications Commission (or FCC). Both the local station and the FCC may be interested in your recordings to help locate the source.

Good luck,
Mark

2379. FS: Ten-Tec Scout w/accessories

Hello to all,

I have for sale a Ten-Tec Scout 555 transceiver with optional noise blanker, hand mic, mobile mount, and band modules for 80/40/20/17/10 meters, along with the manuals. The rig is in good shape with slight wear on the cabinet, and it works fine. It is my dedicated mobile rig, and I use it daily on my way to and from work. The mobile mount is a bit scratched up, but it works fine (it was that way when I got it; I don't use it). I bought the rig used, so I didn't get any of the original boxes. I will sell the whole setup as a package for $500 plus shipping. I just bought an Alinco DX-70T, so the Scout has to go!

The accepted convention for plurality of initials is now to leave the
apostrophe off, so you would have the following:

CDs
IDs

It is probably defined in any secretarial handbook...

Kim W5TIT

There are also examples of banal arguments and I think this is one of them.

2395. Can you purchase Yaesu VX1R software separately ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-20 00:00:00 UTC
From: law <law@nh.ultranet.com>
Message-ID: <38879774.48A32144@nh.ultranet.com>
Source record: 87894

I already own Yaesu's FT-50 and as much as I like Yaesu I find it hard
to
give them another $40 plus for ADMS-1D package, when I already have
the cable and software which I purchased for the FT-50. Does anyone
know of any shareware software for the VX1R. I see it for the VX5R on
the nice VX1R/VX5R Unofficial webpage but nothing for the VX1R.
Does anyone also know if RT Systems sells the software separately ?

Any response would be appreciated.
Thanks !
Larry W.

I am working hard on getting my HF ticket. Lately, I have started looking at HF rigs. Two rigs that seems pretty interesting are the Kachina 505DSP and the Ten-Tec Pegasus. They seem to offer flexibility, "expandability" and seem to be in my price range.

I am wondering what are the pros ans cons of these rigs. Do they need many add-ons to offer good performance or can they do a good job right out of the box.

If you are the owner of one of these rigs, would you buy them again ?
Why ?
What do you like most about your rig ?
What do you hate most about your rig ?
Any special thought ?

Source record: 87905

John,

I bought my HTX-10 three weeks ago, and have logged 30 SSB contacts, including Sweden and Poland while mobile last weekend, using a CB magmount through an MFJ-941 tuner. I have consistently received excellent quality and signal reports. I have found that I need to keep the microphone gain at around 50% or slightly less to minimize clipping. I have a somewhat loud voice, so this might vary with others' voices.

The output on my rig runs at about 30 watts PEP if I drive it to its maximum, even while using a 12.5-Volt bench supply. I find that the fine tune knob overcomes the lack of 100 Hz tuning capacity. It would be nice if it had RIT, but no big deal these days.

I look forward to my impending upgrade to General so that I can use the FM capability of this rig.

Have any of you tried yours in FM mode? I am interested in any reports.

Message-ID: <Mvvh4.1637$IF5.33827@news.rdc1.il.home.com>
Source record: 87945

Hi all,
Just wondering if anybody has ever heard of Frontier Electronics. They were a Japanese company that made a ham rig which I had back in the 70's. (I got mine used, it may have been built in the sixties for all I know...) My rig was a hybrid model with a solid state receiver and tube finals and driver (6146's/12BY7) just like the Kenwood TS520S (Altho the Frontier in no way resembled any Kenwood product)
It covered 80- 10 meters, CW/SSB with built in power supply.

I am trying to find information on this rig and thought someone on this newsgroup might be able to help.

73,
Dan K9RQ

You should try a repeater controller by "Link Communications"
http://www.link-comm.com
There controllers seem to be more eficient and cost friendly. Used
ones are just as great. There controllers are very
similar to the RC-96 and RC-85 controllers plus they have a message
board for support on those old controllers.
Good Luck.

2427. FS Motorola GP300 UHF 438-470 MHz w/DTMF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-20 00:00:00 UTC
From: rnelson@farmtel.net
Message-ID: <38868d7a.921188@news.mwci.net>
Source record: 87950

This is a 16 channel, 4 watt with DTMF scanning handie-talkie that will cover 438-470 MHz. It will do either PL, DPL or carrier squelch on any channel.

Includes heavy-duty spring belt-clip, battery charger and choice of speaker/mic or headset.

This radio is in very good/clean condition and was used in an office enviroment

I can have your frequencies programmed into this radio prior to shipping.

$ 295.00 shipped

Please reply via e-mail and mention this posting.

Bought mine Weds and worked Argentina via mobile on the first contact.
Op reported fine audio..Rx is good..Tuning resolution is 1 kc
though..100 hz would be much better..But for 149.00, who is going to
gripe much, other ops will just have to tune to you if they want to work
you..
PS: and yes I do love it..BTW the other rig is a JST 245, so it has
tough company to keep up with..

I want to buy a tone board for an ICOM IC2AT.
They finally put a tone on my local repeater and I now need to add tone
to my 2AT if I want to get into the repeater.

Please let me know if you have one for sale or know where I can
purchase one.

Regards
Bruce Anderson

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

> Can a MFJ 259 B be used to monitor the operating frequency during QSO?
> How... T into the feed line?
>

Don't do it unless you want to fry the 259. It's designed for a very low level RF input. You could make up a RF sampling device from a ferrite core and a few turns of magnet wire, or use a piece of wire for a short "antenna" for the 259 to sample RF from close proximity.

However, if you want to measure transmitted frequency, you will need to supply a steady signal - cw, AM carrier only, etc. If you modulate the carrier, the frequency counter will not stabilize on the exact frequency.

Hopefully one of you ham radio people can help me out with this problem here,

I work for a security company in the NW Suburbs of Chicago..we have 5 cars that cover this 2 mi apartment complex area. We'd like to setup an MDT System within this 2 mile radius that'll allow the MDT's to communicate to each other & access a database. We can obtain 5 Motorola MDT 9100-11's no problem..I just don't know how to set them up to communicate with each other & access a central database.

If anyone knows how to setup an operation like this, we'd be willing to pay them a few hundred bucks to make this work. Email me at gkaiser@starnetinc.com if you can help me or provide me any information.

Thanks!

-Greg Kaiser

One of the best portable radios for long distance reception is the GE SuperRadio III. It is designed for long haul reception. They cost about $60 in the US and run off of batteries or AC.

However, even with that radio, 180 miles is awfully far to expect reliable FM reception over relatively flat terrain. If you or the station are on a mountaintop with no mountains in-between that might make a difference. If there are mountains in-between that's even worse. The reason is that FM reception is essentially line of sight, and that distance, the curvature of the earth gets in the way and blocks the signal. I really doubt that any receiver alone is going to be able to pick up FM signals from that distance.

The solution is a good antenna mounted up high. If you think about geometry, height essentially overcomes the curvature of the earth and gives the antenna a line of sight path to the transmitter. An outside antenna also helps as walls can reduce signal strength.

You can probably get AM reception at 180 miles, particularly if the transmitter has enough power and is beaming signals in your direction. Chances are some stations will be only be heard during the day and some only at night. While an outside antenna isn't as necessary as for FM, walls can also interfere with AM reception.

The 870 came with some software that gives you a 'virtual' radio on the computer screen. Unfortunately, I don't think Kenwood ever posted this software on their website (they did post the software for the 570 though).

What do you want to do with the computer and the radio? WriteLog

http://www.contesting.com/writelog/

is a contesting / logging program that controls radios and also does RTTY and in version CW.

AirMail is a program for automated EMail (with an external TU) using AMTOR. I don't have a web address for that handy.

> map of hits.

I guess you mean a computer combined with a GPS.

But then you would have to have two GPS's to get accuracy
within a foot (one only works within a few hundred feet).

But then most hits are trash. You would need a way to enter
what each hit was when dug.

I don't think it has any practical application other than documenting
a very important historical excavation. And those people are still
using pencil and paper to draw pictures of what they dig up.

You seem to be searching for a problem. Here's one. Invent a scanner that
has a database of all FCC frequencies in the USA. Stick a GPS in it and
have it dynamically change the scanner bank contents depending on where
you are at any given time. Create generic channel banks such as; police,
fire,
medical, radio, tv, 2m ham, 73cm ham. Make it do automatic trunk tracking if
needed. Give it a modem link to the internet so it can download update FCC
frequencies easily.

Better yet, put the whole thing into a ham radio. Include offsets and PL
tones
for the ham banks. Make it able to transmit on 2m, 73cm bands. Make it a HT.

2453. Is there a newsgroup about scanners?thanks

Don Bertone stated:

>The D2T looks like a winner. It shows a 7 foot boom length
>but how long are the elements? What are the gain and SWR figures
>throught it's spectrum?

If you go to the bottom of the page with the D2T information yoiu will find
link buttons for the SWR measurements for the amatuer bands it was designed
for. The element lengths are 19.8 feet in length.

Tired of rebuilding my 5 element quad every 2 years, time to move on to a more durable commercially made antenna. I was hoping to buy a HyGain 5 element but
MFJ bought them out and so far hasnt offered any of their HF monos. KLM was next with their 6 element but M2 bought them out..Now for M2...I would love to have the big 10M7 but....damn its big...The 10M4 is bound to be a good antenna, but I was wanting something a little bigger...Any comments on my plight, such as when or if MFJ is going to reintroduce the 105BAS, or how you like the 10M4, would be greatly appreciated. As I put it in another string...

"Those "20WPM Extras" that are icons of Amateur Radio legend have given
us underlings a good education on how to act
on HF by putting these practices on display on 3898, and 14313 and
other pompous sections of those elitist bands. I as a
no code tech that passed his advanced, and almost passed the extra
written when I tested for my license will be looking
forward to talking with all my dear friends on HF while I use fowl
language, discuss the intricacies of trailer trash, tell cat
killing stories, and work the actions of my firearms, as I have heard
all of you fine examples do for years. I salute you in
your pursuit of Amateur Radio excellence, and hope to join you soon.
Even now I am studying up on my code, and it will
give me another use for the best CB I ever owned. An Icom 706 mark 2!
Two meters, 6 meters, and CB all in one box. Life is
good!"

I read you loud and clear. I'm getting my upgrade. Don't let those
horses arses get to you. Branch free family trees create those kind of
people that you heard on HF, but there are a lot of nice people to talk
to and nice places to go on the band to get away from that junk.

Here is another jem I wrote. It kinda makes the same point.

"My fellow hams.
Since you insist on arguing, allow me to throw some gas on the fire.
I too am a nocode tech that has a distaste for the ARRL because they do not represent my views. I'm sure that not all of your views are represented by the league either. The league in one way or another is run by crotchety old men and stuffed shirt cw loving young punks that look like a reunion for the revenge of the nerds, that use morse as a method of measuring a hams worth and beating all the rest of us to death with it. I know for a fact that there are lots of technically inclined individuals that either are in ham radio as nocode techs or are not involved at all because of the evil specter of morse.

We have a couple of older hams around here in some of the local clubs that have been teaching classes to become new hams and to upgrade licenses. No offence, but these guys are hard to understand and boring as hell. I appreciate their efforts, but they were chasing off prospective hams. I offered to teach the theory part of the classes, and to tutor folks to pass their Advanced class license theory, and was flatly refused by two clubs that I belonged to. It was not a case of they did not need the help, but they did not want to have a nocode tech teaching the class. I'm pretty good at putting complex issues in simple terms while maintaining the interest of the group, and it's really sad that they were that vain.

I've worked the VHF contests, I've went to Dayton once (they almost had to shackle me and haul me there), I've worked the field days and emergency events, and I could never seem to get away from the holier than thou attitude that permeates the amateur services. There were all kinds of things that were a pain in the butt that were a result of the twisted thinking of some of the hams. Here are some examples.
*What good is an autopatch that you can't make calls on, even if you pay to be able to use it?
*What good are traffic nets where no one wants to deliver the messages? Erie,Pittsburgh,Cleveland,Buffalo
*What good is it to break a repeater for emergency services when the hams cannot relay accurate information in a real emergency? (These guys were advanced's and Extra's that were brain dead.)
*What good is it to take any ham radio with you on a trip and politely ask for directions in a neighboring city, and be ignored. (I finally talked with another ham from out of town on that repeater and proceded to trash the integrity off the hams in that city. They then spoke up and defended themselves and I found out that they did not want to help me because they thought that I was a trucker trying to deliver a commercial load. I was not a trucker, but the truckers did help me on the CB. I now never leave home without one.)
*What good is field day if so many other hams are not allowed to operate HF. That means that it is one or two days of work to set up, and then one or two to tear down and I didn't even get to operate. Then you have the balls to wonder why your turnout is so low.
*There are a few self appointed gods of amateur radio that have picked

fights with the outside community, such as emergency services, commercial radio, CB operators (real bad idea), public events, etc...

All in all, I hope that all the warring factions in amateur radio kill each other off so that those of us who want to use it and enjoy it for all it's worth can do so in peace, and without some holier than thou busy body making and issue of everything. This is supposed to be fun.

After all of you die hard code fiends are dead and gone, or at least in a small minority, I look forward to the day that I can talk on HF with my fellow hams, burp, pass gas, work the action of my firearms on the air, and tell cat killing stories (Like those on 3898 and 14313) without any more grief from the sticks in the mud.

KLOD"

It's not just you that has had enough. Well I better get studying. I also have to figure out what my vanity call will be. Maybe AHzeroLE.

Good wire antennas are easy & cheap to build and install. You will
hear all kinds of folklore and recommendations, just take it all in
and decide what will fit your circumstances, time, and budget.

See if you can obtain a copy of the ARRL antenna handbook (old
versions at libraries are fine) and do some reading before you make
your choice.

A great amount of online information can be obtained from a variety of
ham sites...one commercial site I recommend is
http://www.radioworks.com/. You will obtian even more handy info (esp.
on the do's and dont's of erecting a wire antenna in trees) if you
obtain their printed catalog.

And finally, if you opt to buy a wire antenna, rather than build one
(I recommend you try your hand at building them), RadioWorks has good
products made out of good materials and provides good customer
support.

Good luck and have fun!

I've used both insulated shaft couplers and insulated shafts.
I use Lucite rod for insulated shafts.

From: simpson9532@my-deja.com
Message-ID: <8664nubtn1@nnrp1.deja.com>
Source record: 88042

I replaced a burned-out bulb in the dial of this unit, and have really screwed up the whole thing! VHF range is only 144-146 and uhf is 430 to 435. CPU reset doesn't work. No buttons seem to work, but on the microphone the d/mr button will swap vhf and uhf on the display.

Before I send the unit in for major ($$) overhaul, does anyone have a legitimate suggestion?

Thanks.

I purchased a RS 2052 and am unable to get it to work
on the UHF Motorola system here in NJ.
I entered all the freqs as instructed including the data channel.
I push the trunk button select the bank and hit the search button.
They say that is to find the data channel. from there it just blinks search
and
thats it. I looked at the programming of a radio from the system and it is
type II/IIi is this the problem. It says it only does type II.
Any help would be appreciated before I bring it back.
Doug

I think what you are seeing is the difference between the output of
the transmitter at full constant CW output, whereas the duty cycle of
voice is considerably less.

Nothing is wrong, enjoy your rig.

I have the F-150 4X4 Extended Cab.
As a condition of sale it HAD to pass the RFI tests (I performed!)
My dealer (Garvais Ford in Ayer, MA) was MORE than co-operative!
They installed the fuel pump(s) insulators [isolators], and all was well!
I only found a 6 meter problem, which I can live with.

As the truck gets older I notice I have to replace the spark plug wires
to keep the noise down. I suspect the distributor cap may also need replacing.

(If there IS one!)

They DO offer an ambulance package which is RFI protected!

Have you determined the source of the RFI?
(Ignition on, engine not running tests the fuel pumps for noise...)
[I have dual tanks thats why I say pumps.]
Is the noise synchronous with the engine speed?
Did you contact my friend with the tie [Ed Hare] at the ARRL HQ about the RFI?
We CAN fix this!

Hi,
Anybody in the U.K. interested in exchanging their H.F transceiver
for my TM-455E, it's in excellent condition, boxed etc,
This is the 70cm multimode, ctcss, code squelch, 1200/9600 dedicated
packet socket, removable front panel, speech processor, very, very
sensitive.
I may even consider a good quality receiver, AOR 7030 etc...
Regards,
Gary - G7TOK

If you want just alkaline (without the 'charging contacts on the bottom
of
the pack for 'drop in' chargers) Radio Shack should still have packs
in National Parts for about $8. They hold 6AA cells, and are an
'insert'
in a 'sleeve' as opposed to the Icom version that's a 'clamshell'.
These
packs work on a variety of radios, including ICOM, RS, Maxon, and a few
others.

Hi there.

I am going to be in Arizona for three weeks in march.
Is there a chance to rent a HF rig in the states for that
period ? I am already overdue with luggage so I can't
bring my own stuff this time.

Any ideas ??

Do you have a peak reading wattmeter?
If not then the wattage your disclosing is typically what you would
see on a average reading wattmeter........

Hi,

Recently I bought a TS-120 and VFO-120. I don't have the cable to
connect the two. Can anyone tell me what pins from the 8-pin DIN on the
VFO-120 go to what pins on the 8-pin DIN on the TS-120?

I will be extremelly grateful. You can email me at k8kz@hotmail.com.

Thanks!

> Thanks
> -Laura

Between the two, I'd rather have the 751. But mainly because it's newer and a little more modern. All solid state, and fairly stable etc. But the 820 is a good rig. If it works good, and the performance seems ok to you, I wouldn't be afraid of it. The price for the 820 likely quite a bit less than the 751. I'd be just guessing on prices, but I'd think the 751 maybe around the 550-600% range if in good shape. The 820, I wouldn't give more than about 350-375 or so max. Actually, I'd rather have the TS-830 or TS-530 if I was buying a hybrid kenwood.
Not much more than the 820, and the 530 and 830 can use the digital VFO-230. There are many other brands/models which might be good too. Actually, for 1,000 bucks, I think I would get a kenwood TS-450 which can be had for appx 700-750 plus minus, and that would leave enough for a 12v power supply which you would need for that 12v rig. Probably would have a little cash left over. But you would have a fairly modern semi state of the art rig, with good performance, that could also easily be used mobile as well as in the house. In your place, I'd tend to want to get a fairly recent rig. More stable and easier to use. But, many options.....g And many other worthy rigs too. The 820 is getting along in years, and the 751 no spring chicken either. Of course if they work well, that might not be a big deal. MK

The subject is MORE personal than your tooth-brush! BUT, in addition to the fine comments posted already, I would like to point out that IF you have ANY interest in the "art" of CW, the ONLY current rig to own is ANY model Tec-Tec. FOR A CW OP, the QSK and numerous selectivity filters absolutely make the difference. If you bend towards "phone" , I would suggest you follow the other guys tips...from the way I've noticed, A Japanese rig is a great fone rig you can key once in a while, whereas, the Ten-Tec is a superior CW rig, you can dig out your mike and "yack" over, once in a while!

As for General coverage features, Neither of my Ten-Tec rigs has general coverage. I DO own an ICOM R-70, GC receiver that I use for a monitor receiver (I like to hear what YOU hear. I turn my rig's side tone down totally, and listen to my On-Air signal for monitoring). Also the R-70 runs on a battery, if I want, and I often use it on my test bench, or out in the "antenna farm" for antenna measurements with my Noise Bridge. I would not care to dismantle the station to have that capability....No, Personally, I like a GC receiver not PART of my rig. Best of luck in your choices. Should you care to investigate Ten-Tec, they are at 1-800-833-7373. A bare-bones Corsair is $575....outfitted as one would like, that would go up to around $843. They offer a ten day "no strings attached" return choice, and a 30 days warranty for any problem.....Ask for the "used" equipment inventory information

AGN VY best luck.......73 "DM"

I need to know how to set the subaudible tone on this 7400. Or where can get a tone board for it.

The wattmeter on the 870 is peak reading and you should be seeing 100 watts
out just as you do on CW, you are correct somthing is not normal. There
are sevral adjustments in the service manual for transmitt alc, one of
those could need a bit of tweaking, that would be my guess or you may just
not be driving the radio hard enough with your mike. Do you show ALC when
speaking?

SWR may reduce power output - and use of the antenna tuner will
usually reduce output by 10% or so as well.

Gentner Digital Hybrid I

Excellent Condition

-16 bit

-Analog anti-alias Filter

-Automatic caller muting

-Caller control adjustment

-19" Rackmount unit

-Manual Included

Using digital signal processing technology, the Digital Hybrid I eliminates distortion, weak signals, and feedback - it continuously filters low and high end frequency noises to provide the purest sound available in telephone audio. Unlike a speaker phone, the Hybrid I allows the audio to be transmitted without clipping, or cutting out conversation. The result is clean, crisp audio on every call.

I just purchased an IC-T81a from Icom. This is a quad-band (6/2/440/1296) in the $360 range. The T8a is a tri-band (6/2/440) that can be had for about $260 right now.

I haven't had a chance to burn it up yet, but spec'd the rig, and it was admirable right out of the box...

Stand by for longevity....

BTW I did the xmit mod on the rig. It majkes about 2.5 watts on 220, but (IMPORTANT) it needs a 220 antenna to use it there! Sensitivity is OK on 220, but just so!

2539. Ten Tec Scout drift.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-21 00:00:00 UTC
From: Lester Wahl <torpor-skog@inil.com>
Message-ID: <3889256d$0$41160@news.execpc.com>
Source record: 87851

The older Ten Tec Scout had a drift problem
and it is apparent from some of the Scout(s)
I've worked on the air. I was interested in
purchasing a Scout until after I worked
several of them.

I visited the Ten Tec web site and asked
(Email) if the Scout drift problem has been
corrected. They have not responded to date.

Does anyone know if the new Scout still has
a drift problem, or mods to fix it?

Thanks for your time and interest.

Wondering if there is such a critter as a solid state HF rig with auto
antenna tuner for $500 or less? If not, what's out there for the same price
minus tuner, solid state. Friend has upgraded and looking.
thanks, pse email direct!
Randy

Hi Larry,
The ADMS-1E program supports many Yaesu radios, the VX1r,VX5R, FT-50 and several others that I can't remember offhand. The program choices are available in the setup menu when you first load the program into the computer.The menu asks you to check the box for the radio you have . You can check more than one box.
I have mine set up for the VX1R and theVX5R.
Reload your software and see if you have that option in setup.

you should get final power input of 220 watts pep for ssb, 180 watts for
cw, cut these values in half for power output.

Hi George

Please don't lump all of us 'old-farts' into one basket!

I never understood why they had a code requirement over 5 wpm in the first place. Those of us that wanted to use CW did so because we either enjoyed it, or couldn't afford to build anything more elaborate. I spent my third to my 25th year running 40-meter CW exclusively and had a gay old time until I burned out on CW entirely. My first two years were on 6-meter AM with a powerful 3 watts from a Benton Harbor Lunchbox. Everything else was totally home-brew until the late 60s and early 70s when I went totally Heathkit crazy and built darn near everything they sold.

Amateur Radio has always been a most rewarding activity for me.

I have a Johnson T-R Switch for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=2
42572036

(that is item 242572036)

The description is

This is the venerable E. F. Johnson T-R switch which provides "break-in"
operation with a separate ham transmitter and receiver. The Johnson is
arguably the best designed of the crop of 50's T-R switches, and this
example works well and looks good. There is some surface corrosion on
the front panel which should clean up just fine, and the chassis is a
bit dusty, but otherwise it is in good condition. It worked well when I
took it out of service a few years ago, and I stored it well, so I
believe it to be in good working condition. As with all electronics of
this age, however, this is sold "as is." Comes with the manual and a
couple of magazine reprints discussing the design and use of T-R
switches. A BNC connector has been added in place of the stock probe pin
jack, but I have the stock jack and will include it (if I can find it)
so the winning bidder can restore the switch to stock condition if
desired. Add this to your boatanchor station for the ultimate in
operating ease !

Auction closes 1/30/00

Thank-you.

Source record: 87928

Hmm.
Rig: grounded to body w/ 1" braid.
Body parts: bonded together with 1" Cu strap and sheet
metal screws.
Ant: HS-1500 with 6"L x 1"W Cu strap to truck body.

Exhaust: bonded to body in 4 places along length with 1" Cu strap.
Fuel Pump: I have the RFI filter dealer installed--I THINK..
I've run out of brilliant ideas. I'm down to (1) the
dealer lied when they said they put it in (and to be
honest, knowing this dealer it wouldn't surprise me
one bit) or (2) lump it. No way in h*** could this truck have passed
emitted RFI in its current state--S7+ on all bands.
Any further suggestions? I've also tried an RS alternator
filter, but it didn't seem to have any positive effect, even though
the o-scope shows classic alternator noise waveforms about 0.1V p-p.

> If you are the owner of one of these rigs, would you buy them again ?
> Why ?
> What do you like most about your rig ?
> What do you hate most about your rig ?
> Any special thought ?

The Pegasus is a $US 900 radio and the Kachina is a $US 2000 radio. I used a Pegasus, but returned it under the 30 evaluation trial. Look for my message in this newsgroup dated 1/17/00 titled 'TenTec Pegasus'.

I liked the Pegasus and feel it is worth the money, but it's not a $2,000 radio.

Selecting a radio is a personal matter and is a trade-off between price and performance for most of us. I am willing to pay more for more features. However, don't get the idea that you can't enjoy the HF bands with a less expensive radio.

I found that I didn't particularly like having to fire up the computer to run the radio (which you have to do with both the Pegasus and the Kachina). I like being able to turn real knobs. Most new radios offer some sort of computer interface. For example, the Kenwood TS870 has a very complete computer interface. With the exception of one minor glitch in the design of the interface, you can do everything through the serial port interface that you can do through the front panel of the radio. You can have all the computer controlled features of a radio like the Kachina if you want, but still have the front panel for when you want to turn real knobs.

The current state of the computer controlled radios (either computer-only or computer interface) is still pretty primitive. Most of the implementations still use the computer to give you a 'virtual' radio. They even display a picture of a conventional radio. IMHO, to really exploit the interface, the computer needs a new interface paradigm. A computer program interface to a radio should look like a computer program, not a radio. Also, it should be designed to take minimal screen real estate so that there is room for other programs that will be used in conjunction with the radio.

I recommend that someone starting out start with a recent model USED radio for a couple of reasons.

Since you are new to the hobby, you probably won't have a good understanding of what the features of any radio are and how those features (or lack thereof) will apply to what you want to do. As you make contacts on the air, play with other ham's radios and learn more about equipment in general, you'll probably end up wanting a different radio than your initial selection. There isn't an absolute answer for 'what is the best radio for

me?'

If you start out with a used radio, and take care of it, you will be able to sell the radio for almost what you paid for it. That will give you a better start towards buying your 'ideal' radio once you figure out what that is.

There is a SLIGHT chance that you may start out in the hobby and determine that it really isn't for you at all and that you want out. Again, you can sell a used radio at less of a loss.

Also, give serious consideration to the antenna (or antennas) that you will be using. A less expensive radio with a decent antenna will always outperform a more expensive radio with a mediocre antenna. If you've got a fixed budget, you may want to spend a little less on the radio, to have some money for a better antenna.

73 & Good luck,
Mark, N8ME

Laura,

As a newcomer, I would stay away from a tube radio, such as the TS820. Once you've been around for a while, you may want one, but stick with a solid state radio for starters.

There are some sites that list classified ads for radio equipment. Use a search engine to look for the radio models you're interested in and see what turns up.

You may want to buy your used radio from a store. You probably won't the the rock bottom best price, but at least you will get a radio that's been checked out should have some sort of warranty (30 days or so). The price won't be too much higher. If you have a local store, consider buying a used radio from them. They will probably be a lot of help in getting you going. If you don't have a local store, many of the mail order stores also sell used radios.

73 & Good Luck,
Mark

> ripped off)

Two things I left out of my first post.

You should consider getting a transceiver that includes a 'general coverage' receiver, i.e. one that will receive all frequencies from the AM broadcast band up through 30 MHz. Some older amateur transceivers would only receive in the ham bands. Also, make sure that the transceiver works on 30, 17 and 12 meters. These frequencies were added to the ham bands in the 80's so some older transceivers may not include them.

Go ahead and join now, if your were licensed ANYTIME
during 1975 or earlier, you meet the requirement.
You don't have to wait until actual aniversary date of
your first license. If you were first licensed in
the latter half of 1975 and too late be included in
the 1976 callbook, it's helpful to submit a copy of
your 1975 issue license if you can produce a copy of
it.

Hi There.

I have the following problem with my TS 870 from
Kenwood. On CW and if I whistle to the microphone
I get about 100watts of output. On normal QSO
the TRX delivers not more than 60 watts. It seems to
me that it has something to do with the mike-AGC.
I chenged the Mic-agc setting in the menue but the
problem remains. Is that normal ? Is there any kind
of modification or menue to help out here ?

Thanks for any help.

I have an FT-1000MP that was working fine. Now the rig will not auto-tune on my G5RV on 80mx. Precisely it will not tune past 3.665mHz. It will tune fine on all other bands (10, 15, 20, 40) as well as the three element yagi. I have been told to reset the processor and start over. Is this true?? I am not familiar with the rig (actually belongs to Bill, VE6WDE) but thought this might be so. Anyone out there ever experience this or a similar trouble.
Thnx VE6INM (Glenn)

Murray Neece K5MDM Feb. 2000
US Representative
Giovannini Antennas And The D2T stealth antenna

Thank you for your interest in the Giovannini Antennas...In particular the D2T mini antenna....It has two 19.5 ft elements, both driven, 180 degrees out of phase and is on a 6.5 ft boom....as you can see, it will easily go in an attic or in back of your house, and is designed to operate well at any height over 10 feet.
The US selling price is expectd to be around $495.oo plus shipping, it will come in an 8ft by 10"x10" box via UPS. Your name will go on the interested list and you will be advise when and where they are available...I am just getting started, but expect to be able to place them in your favorite stores quite soon...I will also soon have a US web page up with current information...meanwhile you can go to my used radio web page and learn some details....thanks and feel free to contact me.
I assure that you will be able to get them in mid to late march, if not anywhere else, then on the internet..The performance is very good, almost unbeleiveable for its size....it has easily matched or exceeded all verticals and is only about 10-12db down on 40 and 80 meters at my house. This is what the Italian magazines said it would be. I have replace my log periodic with it and see very little difference accept for the bi-directionality, which will be very helpfull in the "stealth" mode...it fits easily in my attic!! 160 meters thur 2 meters, horizontally polarized and IT WORKS !! Even guys with big rigs will want it for the storm season as it has a great noise cancelling factor compared to most...more when its available..

Thanks 73,

Murray Neece http://www.qth.com/k5mdm/

Why?
Remember the 11th commandment.

Thou shalt not get caught.

Besides, ham radio is not my religion, and I refuse to clutter my
vehicle with radios and BS that I do not need. The 706 gets rid of two
more pieces of equipment that I would have to add. A 148DX and the 150
watt linear that goes with it. Three in one. How sweet it is.

CB radio, I"M ON YOUR SIDE!

Keep working hard and ask yourself WHY amateurs who HATE CB come
here. They are not superior operators because of the license
they hold. They are inferior humans by trying to talk down to the
next guy based on their inadaquacies.

2577. Re: WTB: Portable SW Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-22 00:00:00 UTC
From: Cbisket@webtv.net
Message-ID: <11833-3889FA9F-12@storefull-136.iap.bryant.webtv.net>
Source record: 87701

I have a (Rat Shak) Realistic DX-342 that is about the size of a pack of cigarettes. It has 9 bands, including AM 530 - 1700 and FM stereo. I use a micro alligator clip and some hair-sized coil wire to extend the antenna to bring in BBC, Germany, Spain and all sorts of neat locales.

I use it more than my SONY ICF 2010 because it is so convenient and easy to tune. Reception is ABSOLUTELY INCREDIBLE! At $40 each, I've sent them to friends and family for gifts and got a lot of folks interested in SW. I always include an alligator clip and about 15 feet of fine copper wire just to get them hooked.

I like to go out hiking in the mountains and pull down a branch, tie my wire on and let it GO. Then I can lean back against a tree and enjoy some SW far away from the beaten path. At night, the wire goes on my window blind and in the dark before I go to sleep, listen to news as it is happening all over the world. Try one, you'll like it. Also its good for eavesdropping on 20 & 40 meter ham bands.

Hummmmm, dunno, but maybe they did fix it finally. I have worked many,
many scouts over the years. And it got to the point to where I could ID
a scout, just by hearing it before the guy or gal told me what it was.
Also EVERY scout I worked on 40m cw did this , until the very last one I
worked. I finally worked one a few months ago that was stable. So maybe
they did get a grip on it. Instability on cw in a modern rig is
inexcusable. I think anyway. BTW, not a slam against ten -tec per say,
as all their other rigs are stable, but that scout....
I wonder what they were thinking when testing those. Also by the time
you buy the thing and add all the modules for other bands, you could
have bought a "realï¿½" radio..g I'd much rather have my old Icom 730 than
one of those things. And used, would cost much less. MK

Yeahhh. Well from MY info , I'd expect a Scout to warble around some at
usual 40 m speeds. But
y'know, IF I wanted a super small rig, with the usual GREAT QSK, I think
the OM here would still get one, and then in QSO I wouldn't have to tell
'em my rig! The thing is, I can't operate without QSK....and in my
ignorance of others, I don't know who, if anybody, makes as good a QSK rig.

New Quick & Safe Way To Change H.T. Antennas

Prevent damage to your radio's SMA antenna connection due to having to change antennas for base,mobile,or to a different style than stock antenna use. Adapter will take all the wear and tear,instead of the chassis connector being subjected to wear or from coming loose. You can now quickly and safely change the more popular and wider selection available of BNC antennas,and help to protect your radio from damage,all at a low cost.

Adapter has gold contacts with a neoprene rubber covering. A low profile design adds only 1/2"-to-5/8" depending on radio model to the overall antenna length. The rubber base seals to the top of the radio with no spacers needed to prevent moisture and dirt from entering. The base also provides a positive support for all antenna applications and a better overall appearance than other available adapters. There's no need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R
Icom: IC-R2, IC-T8A, IC-Q7A
Kenwood: TH-G71, TH-D7
Alinco: DJ-V5
Standard: C508A
Aor: AR-16

To view a photo of the adapter go to:

TS-120s with MC-30s noise cancelling mic and stock YK-88S SSB filter
installed. No other filters
Appearance is about 8/10 due to scratches on side, face in nice condition
with no lettering rubbed off.
Radio needs some TLC. Dial lamp has been replaced, but RX sesitivity seems a
little low. Rig has received
5/9+ reports, but I have no time to work on it. Maybe a quick tune up by a
knowlegable person would put it right in
spec again. Keep in mind I'm comparing receive audio with my 706, which is
preamped.

I have the DC cord, mic, plus a copy of the users manual. You pay shipping,
but I guess $15 would cover UPS
ground about anywhere CONUS. Note: will NOT ship outside of the US.

Gary K7MHZ

Hi Glenn...how the winter in VE6? Here due South from Victoria it has been mild. I have an idea that you don't really have a "problem". From my experience with tuned feeders and Non-Resonant antennas, I'd just think that the input Impedance "looking toward the antenna" of that feed line is jusr plain too wild for your built-in automatching network. If I am right, you have two choices. The first, easiest is to hook up 20 or 30 feet more feedline (regardless of what you are using) and try those "bad" freq's again. I bet they will work. Then you will have to find out IF there is a length you can add that will allow "bad" freq ops with no messing up the 'Good" freqs. May be possible...maybe not. If not, you can either know what you problem is, and live with it, OR you can insert an "outboard" matching network, for the "bad " freqs and use that to "help" the feed line become an impedance your RIG can be happy with....then switch that network in and out as you need it....

I load a 17 meter loop successfully on 20 thru 10. When I have tried the same thing for a 40 meter loop, I have had to come up with a section of feedline I clip in to be able to match it on a couple bands. The idea of that the feedline presents a "nice" IMPEDANCE on SEVEN bands is like unto the Tooth Fairy!

73 , and if you ever run into VE6LLV, Joe, in Calgary, PSE QSP 73 FM ME.

2597. TRADE NEW HP/LJ-2100 LASER PRINTER FOR HF TRANCEIVER OR SIMILAR(CANADA ONLY)SEE POST

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-22 00:00:00 UTC
From: Jeffrey&Sherrie Gilkie <kbg1@sprint.ca>
Message-ID: <U5si4.7235$MI4.68539@newscontent-01.sprint.ca>
Source record: 87721

hi
i have a brand new(never opened)hp laserjet 2100 it is 1200x1200dpi/10 pages per minute and 4mb ram.
the present value of this printer is over $1000 plus tax.

i would be willing to trade(within canada only) the printer for a less than 3 yr old high end ham receiver with the following specs: at least to 30mhz(preferably more)/digital readout/memory presets and scan/direct keyboard entry/capable of am/fm/cw/usb/lsb/fm.must be brand name equipment(i will look up the specs and user reviews of any radio you put forward for the trade.the equipment must be in excellent condition.

would also consider one of the high end scanners that are available such as alinco DJ-X10T.would consider either hand held or base of this type.
also consider alinco DX-77T/DX-70H
would also consider a high end rci 10 meter base or mobile tranceiver (not 2950).

if you have anything that you think i might be interested in let me know at the following address:
kbg1@sprint.ca

please give link to website for the radio that you are offering.

would also consider winradio 1500i or icom pcr-1000
regards jeff

remember i want to trade within canada only.

Source record: 87722

I am Going to try to cut down on the amount of radios that I have because
1. I can only use one at a time.
2. I have too Many.

GE MP-D VHF 136-154 MHZ. This Radio is Programmed into the 2 meter ham band and is a great Radio. New large capacity Battery, Charger and has been converted to a BNC antenna connector. I have had a keypad face installed on this
radio but needs a new interface board to make it work. Radio works as a standard non scan MP-D. This radio puts out a little better than 7 watts and I can get into almost all of the repeaters in my area. Oh yes the Radio is intrinsically safe
as well as the new intrinsically safe battery (over $175.00) from GE.
$300.00

GE MP-D UHF This Radio is programmed into the UHF ham bands and is as great a radio as the VHF radio above. This radio has the standard antenna, a new intrinsically safe battery, Belt clip, and a charger. Standard non scan radio. Just to explain a little about MP-D's for the people that do not know they are 48 channel Alpha numeric radio's . This radio is very wide banded as I have ham and GMRS repeaters programmed into it and it is just as good at both ends of its split.
$225.00

GE MT-L UHF This radio is also programmed into the UHF ham band as well as a GMRS repeater. Radio is a 16 channel scan version that has slight wear on edges. comes with charger and new Intrinsically safe Battery and yes the factory antenna. I like this radio it is a poor mans MP-A and works just like an MP-A select. With the new
battery $250.00

Kenwood TK330 UHF. This Radio is in the 450 - 470 split and is not programmed
by me into anything. I can hear my local police on it so I know it works. Radio is a 10 channel with scan and is programmable. I do not have a charger for this radio I have been charging it on a universal charger just to listen to the Local police.
This radio looks great and still has the speaker mic cover over the connection.
1600 Mah battery and antenna.
$150.00

Icom U18 UHF . This is also a 450 - 470 split radio and I have not tried to get it programmed onto any frequency yet. I have been listening to local businesses on it and finally figured out I was listening to a garbage collection company. Anyway this is a 16 channel scan radio with a radio

shack battery that can be charged with a wall wart charger. Radio is in great shape and will take a large assortment of batteries from commercial and Ham Radio's. And it uses a standard 2 prong
Speaker mic.
$125.00

Maxon 2850 UHF This is another radio in the 450 - 470 split that I have and have not used for anything. Radio is working but not programmed to anything I can pick up. But I can talk to it and hear it with My FT50. Radio is 10 channel with standard Battery and Maxon charger.
$125.00

Mobiles

GE MVS UHF radio This one is in my van right now and is my UHF ham radio. This is a 25 watt UHF wide band radio that will do ham band and GMRS and the best part is it is 128 channels and I have all but 14 programmed into it. Radio will scan 16 frequencies at a time and is another great GE product. The only reason I am selling this radio is I am trying to cut down on the radios in my van. It looks like mission control with all the single radio's. I need to get a dual band radio to take it's place.
$250.00

Motorola Mitrek UHF Radio's I have two Complete 50 watt radio's that would make great link radio's as they are 410 - 430 split. I bought these with this in mind. They come complete with cable, single channel control heads, Mic, and speaker.
$40.00 ea.

Well that is it for now I may have a few more radio's out in the garage if so I will post another ad. As usual I will consider offers and trades for other radio equipment
Dean

Try Polaris Industries, in Atlanta, GA. You need the number 12A cable for the GP300. Cost is $149.95. The Maxtrac cable is a number 3 cable for $59.95. The RIB is available in 3 models. I have used the PA-II adapter for $159.95. It comes with a power supply and an internal nicad battery.

The phone number is 1-800-752-3571.

Have fun programming. Jim

Does anyone know anything about, or have any printed information about,
the American Microphone Co.'s (Pasadena, CA) D4 microphone? Dynamic?
Hi-Z? Freq. response? When made? Cost? etc.? I'd appreciate any
information you might have--or leads to some. Tks es 73! Jan N0JR

FS: Icom 737 HF tranceiver in mint condition and in original box with original manual and a service manual. It works perfect and has the nice large LCD display, Digital Readout frequency offset, passband tuning, a host of other features, and built-in antenna tuner that really works nicely. I want $650 for it. I will trade it for a TMC GPR-90 receiver also.....Mike.

To be most accurate this equipment is for auction FA: not for sale FS:

There is a difference as many people choose not to get involved in the auction scene.

Second point: In this part of the woods (NW United States) packet is very active for a number of reasons. The one of most interest to me is the ability to transmit large amounts of information accurately, in an emergency situation, when other forms of communication might not be available or reliable.

Source record: 87870

Hi Billy,

I've had two TR-7400A's which were both purchased new. Still have one that is just like it came out of the box----it's been a great and reliable radio.

For P/L operation Kenwood sold small plug-in tone squelch active filters which were available as separate items. The manual lists 16 different ones from 88.5 hz to 156.7 hz. I have several of these filters and they work well, but you can only use one at a time in the factory as built configuration. This was the way it was done 20 years ago. There are six pin outs, so I suppose a switch could be set up for switching multiple tones, but not very conveniently.

If you have a particular squelch tone in mind, email me and I'll look up the part number, but Kenwood may not stock these any more. If you're looking for just encode, it might be easier to get one of the after market boards like a Com Spec, etc. and wire it into the modulator circuit.

Brian

John

The first ones that came out had a problem with tone decode taking about 1
sec to decode before the squelch opened up but Yaesu has fixed that problem.
I've got one of the first ones out and haven't seen this problem. It's been
a great rig. Lots of features in such a small package. The litium ion
battery gives good service and no problem with memory's like ni-cads.

Dis-likes:
The sub-min phone plug they use to connect the extrenal
speaker/mic/earphone. Not something your going to find at your local parts
store.
The belt clip isn't much. Although there's a ham that has come up with a
nice replacement.

One list had a discussion thread going on this rig, not sure if it's still
going but you might check the archives for all the past comments and get a
feel of what others think about it.

I'd buy another one if I was in the market for another hand-held.

Mark

2633. Re: YAESU VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-22 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000122045015.03703.00001323@ng-fs1.aol.com>
Source record: 87875

Hello John,

I've only had my new Yaesu VX-5R for two days now, but do I ever like it! I have had the FT-50R for a couple of years and the VX-1R for a couple of months, but they really don't compare to the VX-5R... The VX-5R has a very nice solid feel to it but without being as bulky as the FT-50R. The FT-50R felt more like a potato in your hand then a radio...the VX-5R sure feels good. The other thing I am really excited about is the VX-5Rs battery life, its great! I actually had to "work" to kill the battery after its very first charge...I just wanted to see how long it would last..let me tell you, it (the battery) can get you through several QSOs...no problem. And with the TX power save feature that automatically cuts your TX power down when the receiver detects a strong signal from the repeater, makes for smart operating...

The one gripe that I have with the VX-5R that is now becoming apperant is the Metric read out of the Temp feature...and that goes for Baro/Alt also.

Other than that its wonderful and complete...

Go ahead, get one...you won't be unhappy that you did... =)

Jason S. Hulet

> Does anyone know if the new Scout still has
>a drift problem, or mods to fix it?

The problem isn't drift per se, rather it is the
circuit doing electronic correction for long
term drift. The VFO is actually an analog
oscillator with reasonable drift characteristics
for a circuit of its type. A huff and puff type of
AFC is applied to it to provide pseudo-synthesizer
long term stability.

There is enough hystersis that when a frequency
correction is applied, the carrier jumps a few Hertz.
This behavior is inherent to the huff and puff circuit
design. AFAIK no mod short of complete redesign
would fix it.

You could disable the AFC, and just live with the
inaccuracy of the frequency reported by the display,
ie mask off the last couple of digits. Then it wouldn't
be any worse than any old analog radio. But to get
the sort of precision we've come to expect in a modern
radio, you'd need to replace the entire frequency
control section with a crystal referenced synthesizer,
as other modern radios do.

NEW ITEMS;

HP Model 4150 SWR meter in very good condition. I use it with DC power.
But it can also be used with 110 AC asking $30.00 plus shipping

EMC Tube tester Model 211-213 works. Is in very good condition. No
scratches or marks.
The meter is perfect. Sorry no manual. asking $25.00 plus
shipping.

Channel Master model 7054 50 - 500mhz 50dB wideband amplifier. Works.
Is in perfect condition. No marks and clean. Excellent for ATV as a preamp.
I've used it for both TV and UHF scanner reception. asking 35.00 obo
plus shipping.

Source record: 87888

Additional discussion of the frequency "jump" in the Scouts can be found in the original QST Product review.

In my own experience, the problem is nearly nonexixtant when operating under "home conditions," ie, stable temps and full voltage. The osc seems to be way too voltage-sensitive to allow battery operation in the field.

Exactly...I do not own a Scout, but a few Corsairs and a Hercules, and consider myself a Ten-Tec guy. So I called a fairly high placed guy back there, that I've known for years. I asked him why Scouts I QSO all moved around a little (Not much, really...but we ARE used to "solid" these years)

He told me about the frequency control circuitry, and it has something to do with the time a "gob" of RF is on-air...the Sampling Time. For SSB, the signal is on a long time, and the correction circuit does it's job with no problem. For SLOWER CW, it is also OK, but get cooking along 20/30 WPM, as we are prone to do, and .....well you have heard it.

I asked if it was correctable.....I believe the reply was a long "sigh".....

It is really too bad, I love Ten-Tec stuff, but they are only Human, and a few "eggs" have been laid back there.....worse than this one!

2657. Question about Model 450 Speed-X code practice set

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: longbch <longbch@excite.com>
Message-ID: <86flk9$be6$1@nntp9.atl.mindspring.net>
Source record: 87650

Hello,

I have a couple of Speed-X code practice keys with buzzers, and I was wondering if anybody knows anything about them.

This a model 450 practice set made by E.F. Johnson Co. Waseca, Minn.

Here are a couple of pictures of the set:

http://www.mindspring.com/~longbch/key1.jpg
http://www.mindspring.com/~longbch/key2.jpg

There are three terminals in the upper right hand corner of the base. The first two terminals are labeled "Buzzer," the second and third terminals are labeled "Key," and the first and third terminals are labeled "Battery."

I was wondering if anybody knew:

1) When were these keys made?
2) Who used these keys to learn CW? Hams? Boy Scouts? Military?
3) What battery voltage should be used to make the buzzer work?

Thanks,
Kelly

Thank you for taking the time to read my post. I have an Icom IC-746,
and when I select between Slow and Fast on the AGC, there apears to be

no difference that I can detect.....I am unable to detect the attack and
decay
on CW, as well as SSB when I toggle between the 2 modes...
Any help before I go on valium would be deeply appreciated...

Warmest Regards,

Tom Friedman....KC1LW@mindspring.com

Had this problem as well with my 241. You will have to reset the processor. Press and hold the MR/M key and turn on the power, release the MR/M key then press the MR/M key again.

Hope this helps,
Chris, K4RCH

For CW: use ears and brain;

For RTTY and WX satellites, use a HAMCOMM interface and shareware
software.

Dear Group,

We are currently running a special on 2 radios.

Patcomm PC-9000 HF + 6m Compact Rig
Patcomm PC-16000A Deluxe HF Base Rig

Patcomm makes their radios in USA! This is a
true American company.

Here is an Incentive to upgrade to General Class License or higher!

The following specials apply to Novice, Technician No-Code and
Technician Plus Class Licensees who upgrade on or before 04/01/2000 to
General Class or Higher!

Patcomm PC-9000 $25.00 OFF!!!

Patcomm PC-16000A $150.00 OFF!!!

You must have upgraded between Jan 08, 2000 and April 01, 2000.
Offer only good through 04/15/2000!

So, please visit us:

http://magelectronics.8m.com

We also have great deals on other Ham Radio & Commercial Radios, as
well as Computer Products.

Thank You for reading & 73,

Mike KQ6MU

2670. Re: Restructuring is a good thing

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: Larry Gauthier <larryg@ismi.net>
Message-ID: <388b7bcc@news.ismi.net>
Source record: 87663
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.policy

Well, today I can say from first-hand experience that the restructuring will have a big effect on upgrades. I went down to a local examination site yesterday (South Lyon, MI) to sit for the Extra. There were 13 hams in the room, all applying for some type of upgrade (in other words, no new hams). The VE's were amazed - this is the largest crowd they have EVER had, and this group has been doing exams foever. South Lyon is not a big place.

Anyway, of the 13 hams, three tooks code tests: 1 was a tech trying to upgrade, so he had to take a 5 WPM code test (he passed). Another was a tech plus going for general, and he took the 13 WPM test to see "if he could do it" - he passed. I was the third, and took the 20 WPM test 'cause I wanted to pass my Extra "the old way" (which I did).

The rest of the guys (no gals at this sitting) in the room took various forms of upgrades, all happy to be able to upgrade their licenses without the code test which had previously stopped them. One guy had been a ham for 42 yeas, but could not get beyond the 13 WPM barrier --he passed the Extra written. Of the 13, ALL passed everything; the three code test takes and the 13 written elements -- another first for this club, all applicants passing. (two of them aced the written w/ 100%.. _I_ was NOT one of those! ;-)

So, today I am a /AE Extra (after having been Advanced for 30 years...), and did it with the 20 WPM code - only because I enjoy CW and this was not a barrier for me. But, the restructuring got me moving, as it got many others moving.

And you know what? Those guys who earned their Extras without CW yesterday are having JUST AS MUCH FUN at this hobby as I am! Ain't it great? (that is what this is all about, right?)

I tried the ARRL site but nothing close by here.
I know there is one up here somewhere, But since
I cant hook up the ham station here, I cant find out on the
frequencies. One of the closest one was Sacramento, But that is over
150 miles away. Thanx for the help though.

>after April 15th.

What you're really asking here is to shrink the *data segments* of HF.
There aren't any FCC recognized separate CW band segments on HF.
CW operators confine themselves to the lower ends of the bands only
by custom. The FCC recognizes only two types of subdivided spectrum
on HF, data and voice/image. Data activity is currently the fastest
growing usage of HF. It wouldn't be prudent to reduce available data
spectrum.

Voice/image usage may grow after April 15th, but there's already a place
for it to grow, and that's into the underutilized Advanced and Extra voice
spectrum. If more spectrum than that turns out to be needed for voice/image
operation, then the FCC should revisit the ARRL proposal to refarm the
Novice spectrum.

2677. Kenwood TM-V7A Mic

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: John Thurston <n0meq@mitec.net>
Message-ID: <388bbfe6_3@goliath.newsfeeds.com>
Source record: 87670

Does anyone have a fix for the TM-V7A hand mic? When I have all the features turned on which is "remote control" on the hand mic it does not take long for external noise to change the radio functions but when I have the remote shut off the radio is fine. It seems to occur mostly if alot of intermod is close such as driving in downtown Omaha.

Actually, this is incorrect. The TS-820S does have 160 meters. It just doesn't have the "WARC" bands.....it was the old Kenwood TS-520 that didn't have 160 meter band in it. Mark W4UDX

Mark,

I've used both the Butternut HF6V and GAP Eagle DX. Both antennas worked about the same for me, but I prefer the GAP because is doesn't need radials. Verticals may not break into a pileup against the big boys who use 1kW amplifiers and 6 element beams up 100 ft, but for the money and ease of ownership, they can't be beat.

You got that right Larry! Too bad some of the posters on this news group
with a poor attitude have not figured that out yet.

Since you say you are near South Lyon Mi, do you know any of the following
Hams?

KC8GTR (Larry)
KC8GTS (Harold)
KB8UFQ (Bill)
KB8KRR (Greg) (just upgraded to General)
AA8OZ (Paul)
KC8MCM (Roger)

The first three Hams, including my self, will probably be at the Livonia Mi
hamfest put on by the Livonia Amateur Radio Club (http://www.larc.mi.org/)
in February.

> > Thank you
The 820 has 160m also. Of all the kenwood hybrids only the original
TS520 didn't have 160m. The later 520s and 520se did have 160. I have a
TS830 here. Myself, I think all the old KW hybrids are good solid
radios, but my choice is either the 830 or the 530. The reason being you
can use the digital VFO-230 with them. It won't work on the 820. The
VFO-230 ultra stable. Makes a 830 or 530 as solid as a 930-940 etc. No
drift at all. Also a few memories. I prefer the 830 out of the two, as
naturally it's the latest and greatest model of that line, so the
newest, and also has the VBT and IF shift, notch, and you are able to
run filters in both IF's. The 830 is a decent CW rig with no extra cw
filter, as you can use the VBT to dial down to appx 500hz. I have a
455kc 500hz cw filter also, and with the VBT can narrow down to appx 150
hz. And the audio on all of them is good, both transmit and receive. I'd
go the 830. And then plan on getting a vfo-230. They are not going
cheap, but worth the money if you plan on keeping and using the rig.
Gives the 830 kinda of a "930" feel to it. The built in analog VFO does
drift a tad. I can leave the vfo-230 on for months at a time and not
move. Also no warmup drift like you get on the internal vfo.

Well, believe it or not some people do put filters in home built receivers. But perhaps you'd rather complain than think a bit.

I strongly believe the message below has been posted with fraudulent intent. It is similar in style and detail to a message I responded to on December 4th, 1999. The individual received a money order for $400 USD, cashed the money order, and then refused to send the goods. Complaints are in process through the U.S. Postal Inspection Service and other agencies with jurisdiction.

Has anyone else fallen victim to this individual?

I sent payment to someone describing himself as:

Babak (aka "Bob") Hamidi
85 Springhead Gardens
Richmond Hill, Ontario L4C 5C3
Canada

905-884-8841
877-262-7073 (now disconnected)
416-276-1380 (mobile)

Babak used the following addresses: webhoster@home.com, midnighthacker@home.com.

Any information would be appreciated. And beware of this offer!

How much damage to a Yaseu FT-50 can be caused by modifying radio to transmit on 154-158mhz range. Plan using radio with fire dept. for general use not extreme use(have a GE to trash in fires).
I also noticed that by changing antenna to VHF antenna (using SMA/BNC adapter), I get better range for hitting fire dept. repeaters.Will this make things better/worse. I have been changing antennas to factory when using ham frequencies.

Please reply to E-mail not Newsgroup. lorgeron@cajun.net

2693. NEW List for posting notices of Ham Auctions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <86gacp$2vv$1@ns2.foothill.net>
Source record: 87686

A LIST is now set up for the posting of "AUCTIONS" for
HAM related items (NOT TUBE era stuff). For our purposes,
"Auctions" mean items listed for sale without fixed prices.
Postings may be as simple as "$150 obo", or formal auction
terms, or the announcement of a URL at which there is an
auction (e.g. an eBay address, etc.).
"HAM" does NOT include audiophile gear, tubes or parts,
or CB stuff except linears actually tuned to only Ham Bands.

Subscribers have the choices of:
1. Receiving each email posted by each subscriber.
2. Receiving all emails once each day in one message.
3. Receiving a digest once each day of just the "subjects"
and "authors" of each message.
4. Receiving no emails. but allowing subscriber to go to
egroups.com and selecting this LIST
"bham-auctions@egroups.com" and then
selecting which messages to view by "subject"

To subscribe
SEND TO: ham-auctions-subscribe@egroups.com
Note: Plural "auctions" and "egroups"

RULES will be simple:
Post for HAM related items only, for which firm prices are
NOT stated. Not for tube era gear, another LIST
has been set up for that.
NO radio program tapes, magazine cut-out ads, CB stuff
(except linears tuned to Ham Bands), or tubes or
parts for the audiophile market.
Please refrain from claiming something is "rare" unless
certain almost anyone would consider it rare.
Post only once for each auction. (No followup messages)
PLAIN simple TEXT ONLY. (Not even a background color)
Use descriptive "Subject" headings.
Include closing dates where appropriate

To change the mode by which you receive messages
(Every message, all messages at once daily, all message headings only once
daily, or go to egroups.com and select messages to read)
GO TO: http://www.egroups.com
SELECT: "My Space" button
Then SELECT the group for which you wish to change
your mode of receiving messages.
SELECT: "Group Info" button on bar.

SELECT: "Modify Subscription" button at bottom page.
Then make the changes.
SELECT: "Apply Changes" button

FOR THE NEXT FEW DAYS (after 1/22/00) emails may
contain some advertising. That should end when egroups
receives my check, which has bneen mailed.

THIS MESSAGE MAY BE FREELY COPIED AND
REPOSTED in its entirety.

2698. Need help-Bird 43

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: pmunsel@aol.com
Message-ID: <20000122194711.03563.00000953@ng-co1.aol.com>
Source record: 87743

A friend found a Bird 43 at a garage sale, and bought it for "next to nothing". He said he figured I could use it, and passed it on. The reason it was cheap, is that someone had been inside, and moved/changed the insides around. I would like a schematic, and the SWR graph if anyone has them. There is a piece of coax cable about 12' long with a special 90 degree connector, and the loose end is not connected. It must go to the meter itself, and where the connector attaches to the feed through, the tab inside has been bent several times. I figure it must contact the side of the element when plugged in. Now, I did make an attempt to put it in place as above, and was able to get a micro movement of the meter when I applied a 45 watt signal. The element covers my 2m freq, and is rated at 500 watts. I also have a 50 element for the same freq, and same movement. Any suggestions? All help is appreciated.

The reason the average age of an Amateur Radio operator has risen as high as it has is because of the attitude of the Amateur Radio operators. Granted, not all share this attitude, but those that don't are the exception, rather than the rule. I for one have been trying to understand this attitude, but have failed. If there are any hams out there who would like to enlighten me, I will be more than happy to further my education. Thanks in advance, Bill.

2701. Re: Unstoppable F-150 ignition noise?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <388907ef.5451258@news.primenet.com>
Source record: 87746

Oops...
Thanks for the response, good to see another '99 owner out there who's had luck--that mean's there's hope for me.
The rig is FT-100, but it's the same deal with my IC-735.
As to the source of the noise, that I'm not terribly sure about. I did the "fuel pump" test (ignition on, starter off) and I heard the fuel pump hash, that's why I got the filter. But actually it still does it, even after the filter install, which is why I suspect the dealer might have pulled a fast one. (Part of my suspicion is based on the fact that I had to fight them tooth-and-nail to even LOOK for the TSB on it, and in the end I had to supply them with it. After two weeks they called and said they had the parts, bring it in--and then they couldn't let me have it that night because "they needed parts". HORSE****).
As to the Ford Engineering Recommendations, I've followed them all except I'll admit that the coax run to the antenna is parallel and adjacent to a wiring harness run, which I intend to rectify using FLC1-50 hardline. BUT I tested just a direct run of coax between antenna and rig outside of the truck (just lying on the ground) with no difference noted.
When the motor's running, though, the noise is much MUCH louder than just the fuel pump. So there's at least two sources of trouble. The alternator waveform comment was just fishing; I've never seen anyone relate an amount of commutator noise to RF noise (that is, I don't know how clean "clean enough" is, and I can't get it clean to tell if that's indeed the issue).
I've sniffed the truck with my VX-5R in AM mode at 13MHz, the largest noise sources are the wiring harnesses--the dome light when it's on, the airbag in the steering wheel (worst one!), even--get this--the trailer wiring plug, but only when the cover is open (cover closed, all quiet).
As to modes, it's all modes--SSB, CW, AM. The NB on the FT-100 actually does a really good job of knocking it down, but it can only do so much--and there's no doubt I'm giving up some sensitivity in RX. Gawd I wish I was just at S3 in SSB!

Thanks George.
Thing is, (1) it's brand new, and (2) the '99 Ford doesn't use a
distributor or HV ignition. It's a distributed electronic ignition
system that has small coils actually in the cylinder head, and the
"wires" are just 12V.
I've not seen anyone specifically apply resistive wire to distributed
ignition, but maybe...

I've seem some radios with several bands and others with continuous
tuning. How important is it to have continuous tuning over the
entire SW, MW and LW spectrum vs. only certain bands?

I don't hate CBers. I was a license CBer in the early 70's. I got my
first ham ticket in 1961 and general class in 62. I currently have an
extra clas ham ticket.
What I don't like about CBers is that fact that they think that they
are above the law. Death threats, profanity, and hate talk dominate
the CB channels. A person running legal power is a rare thing on the
CB bands where I live. If my children were little, I would not
hesitate letting them work the ham bands unsupervised.
But,like the Internet, I would not consider letting my children
work the cB channels unsupervised. That is why hams don't want
the CB set comming up to the ham bands.
Just a thought

Optoelectronics Xplorer Test Receiver Unblocked Version
For Sale:
It will lock on to any signal determined by the Squalch Meter
It has CTCSS, DTMF, Deviation, CTS and GPS(Optional)
You can lockout and Memorize any Freq.
It has backlighting and Will display Two lines of info plus you can hear the conversation!
This unit has NO GAPS! It has Automatic And VFO so u can fine tune it.
It comes Witth The Following:
The Test Receiver
Telescopic Ant.
800Mhz Ant.
RS-232 Cable & Software To connect to PC
Charger
In excellent condition
Visit www.optoelectronics.com for Full description
email me at linksearch@mailcity.com
Price is $400

2713. HP 5328A Universal (frequency) Counter at Auction

My mistake,

The stamps DID include Tesla, they left out Marconi (a REAL surprise).

Hi,

I plan to get a Kenwood TH-D7 but according to recent rumors there
should be a 'second generation' TH-D7 soon. This handheld is supposed
to have upgraded TNC software so it kan be used in KISS mode.
Does anyone know when Kenwood is releasing the updated TH-D7 and if
there are any other improvements?

Thanks.

bye Maurice

2723. Restructuring is a good thing. By Floyd at www.qrz.com

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: georgedean <georgedean@mindspring.com>
Message-ID: <86el3a$6rm$1@nntp5.atl.mindspring.net>
Source record: 87768
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.policy

Dear Floyd QST

I would like to thank you for writing this article about how restructuring is a good thing. I have been a ham radio operator for about seven years and I was getting to the point of quiting the hobby because the lack of accessibility to gain privileges on the HF spectrum due to the code requirements. About six months ago I decided to give it one last shot when it comes to the 13 words per minute code. To my surprise I did achieve 13 words per minute and became a general amateur radio operator about two months ago.

When I heard about the restructuring of the licenses my first reaction was to be very mad. How dare does the FCC changed requirements after all my hard work. Then I started to think back to that seven years that I was frustrated about the code and how just about every month or two I was swaying back and forth on if I was going to sell my radios and settle for the Internet.

But then I realized that everything you said in your article was true. If we do not entice new members to join the ranks of amateur radio and build up our numbers we will surely be extinct in about 20 years. The older hams or as you said the old farts only have one selfish idea in mind. They believe that only they deserve to be up on the H. F. spectrum unless you pass all of their requirements. When you ask one of these older hams about the future of ham radio I generally get this reply back and I quote"why should I care I will probably be dead by then". With attitudes like these we are surely in trouble if we do not get fresh blood into our hobby.

There is one thing that the FCC needs to do. They now have recognize that Morse code is no longer a major requirement when advancing our licenses in his hobby because of that I also believe the FCC should shorten the spectrum of frequencies used for Morse code. For the amount of activity which is very little in the cw range it could be better utilized for voice and digital transmissions. The reason I say this is we should be giving "the new generation of ham radio operators" more spectrum to enjoy voice communications instead of just making the frequencies very crowded and impossible to use due to the ham radio population explosion that we will see after April 15th.

Well thats about it for me and once again I thank you for the truth that is written in your article.

Sincerely George KB0MAI

Glad to hear you passed your 13wpm. I have been trying to pass it for 2 yrs now. The fact is that not having much time to practice or learn CW is the reason for me not being able to practice as much as I would like. I hope that some of the old timers realize that by FCC restructuring the ARS will give them more of a chance to make contacts in the US on the HF bands. Also I would like to say that, We will be old timers someday and I just hope that it never gets to the point of it turning out like CB, but with the involvment of amateurs around the world and the FCC, it will never get like that.

Where I live, I dont see too much involvement from schools or local organizations and would like to help create some sort of atmosphere to interest the general population in the amateur hobby. Once I pass my code, I will be asking here and local ham clubs for pointers on what to do to encourage this. I would like to see the community get involved and prosper from ham radio instead of kill it.

But now I have stumbled on a different task to accomplish. I have recentl learned that my practice of code in "Farnsworth" format will not do me too good since the testing procedures are done in normal morse code. Since I have the time now too wait till the 15th, I guess I can practice in the normal routine, Instead of trying before the restructure.

I would also like to add, That I notice alot of new hams that do not upgrade have a tendency to not stay with the hobby for very long and dissappear for yrs. Maybe this is an encentive to stick with it.

> Looking for the ACCY2 (13-pin DIN) pin numbering and descriptions for the
> Kenwood TS-940. Thanks in advance!
> Rick Davis

Pin(s) Description
1,2 Acc SW (looking at the schematic, these pins appear to not be
connected to anything
3 Data output (Fixed level, 300 mV or more at max receiving input
to 4.7k ohm load)
4 Ground for pin 3
5-7 N/C
8 GND
9 Mic Mute - signal input from the MIC jack is muted. Grounding
mutes signal
10 N/C
11 Data input (500 mv or less). Note: the Mic gain control affects
this input in SSB
12 Ground for pin 11
13 Standby (PTT) terminal.

Note: on my TS870, the pins are essentially the same, but grounding the Mic Mute (pin 9) also causes the radio to transmit. On the TS940, grounding Mic Mute does not cause transmit.

73,
Mark

2730. Complete Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-23 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <388B155A.CE5DF1EA@lakefield.net>
Source record: 87775
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

The telewave duplexers new price for the TPRD-1556 is $1572.00 as
listed on internet site.
The Scom 7k with voice, phone, and prg lists new about $ 850.00 as
listed on internet site.
The Micor comes converted for 2m, with service manuals, and power
supply,
in cabinet, is worth. $1500.00

The total replacement cost would be $3922.00
depending on what you can get a converted Micor base, or repeater for.

I am asking $2250 plus shipping and insurance, shipped from Manitowoc,
WI 54220

Please, serious inquiries only.

Hi Don,
I have both radios, and like them both. I think you'll find them on a par for performance, but the '830 has more bells & whistles. The filters on the '830 are real nice to have. Being a more modern rig, and if I HAD to choose, I'd go the TS-830. That doesn't mean the '820 is no good, I still use it and my '520 a lot. The finals are the same in all of them and they are no doubt some of the best "hybrids" built. They are all rock solid (as analogue/mechanical tuning goes) and fairly easy to repair should something go wrong. I don't think you'd be disappointed in either rig. Just my two cents worth.

I have same rig. After a period of years, the display dimmed. Only one side of the display lit up (tho', I could still read the numbers). I sent it to an Icom guy in Dallas -- can't recall his name -- and he installed new bulbs or whatever. He said it's a hell of a rig to work on, everything is so jammed in there.

Source record: 87792

Hi there! The mailing address for Bird is :: BIRD Electronics Corp.
30303 Aurora Road Cleveland (Solon) Ohio 44139 [As read from my
'43 Instruction manual]

Unfortunately, the big metal chunk that hold the slug is only the
beginning. The correct meter for the '43 is 30 MicroAmps...an odd size.
The cable to the meter is simply RG-58/u, but there is a special connector
that screws into the directional coupler, right near the slug hole. There
are FIFTEEN (15) possible "quick-change" coax connectors you can get to use
the directional coupler with. And, I am sure you know that slugs are
expensive. BUT, I would be hard pressed to live without mine. I also
fell heir to a directional coupler and one slug. FREE. I bought parts,
meter, cable, a set of input/output Q-C connectors... and a small metal
box! The '43 case COSTS, and frankly I've been happier with the ability to
put the directional coupler in one place, and the meter box elsewhere. I've
got chunk of change in the project, but am happy...and it IS a W H O L E
LOT CHEAPER than a '43, even one in its own case! Hope this helps you
some.... 73 "DM"

Hurry and buy before April! Soon to be a collector's edition of the ARRL "Now You're Talking!" technician/novice study guide and the matching "Your Introduction to Morse Code" 5 WPM morse code training tapes. Book is in excellent condition with no outlined answers and tapes are unused. I got these for my son who decided he didn't want to get into radio. These cost $31 new plus shipping, I will sell for ONLY $20 plus shipping. Or may trade for a used Autek audio filter. But ACT NOW BEFORE THEY ARE OBSOLETE!

Email: W4UDX@juno.com Thanks. Mark

I don't know how Jim tested this filter for AM reception. It is 1.2 KHZ bandwidth filter not AM filter (FYI, Q5 is 0.5 KHZ CW filter, Q6 is 1.2 KHZ filter). It is O.K. for wide 850HZ Shift RTTY, not suitable even for SSB !

Maybe you could find a US dealer that will sell you a used
rig with a buy-back guarantee (price dependent on condition)
at end of trip.

The difference is you are buying the radio and selling it,
not renting it, but that may be your best chance. I am not
aware of anyone that "rents" radios (unless as part of a
larger "DX-location rental" - which includes house).

What is your plan for an aerial? Just curious...

HTH, good luck!

I have the"cool blue" Kenwood TM-V7 dual band transceiver for sale.
This rig has never been in a mobile installation and has only been
used in my shack. I am a non smoker. The radio is in excellent
condition and I have the orginal box, manual and all supplied
accessories. I am the original owner. I am selling this rig as I have
recently purchased a TM700 and I no longer need it. The radio is
computer programmable with free software available on the Kenwood web
page. Click on this link get more information on this radio.
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-V7A&selection=Ama
teur
This radio has an incredible number of features and puts out a full 50
watts.

I am asking $390 shipped to your door in CONUS.

Mike

From Dale, HRO-Anaheim employee:

Early Sunday morning, January 23rd, 2000, a major fire raged thru the Anaheim, Ca. Ham Radio Outlet The store was a total loss. For the next two weeks the 800 line and the local phone number will be redirected to the Burbank, Ca. store. Dale KB7UB, Bill W1HIJ and Terry N6WI from the Anaheim store will be in Burbank, Ca. to take your calls.

We have already made arrangements to re-open as soon as possible. The specific schedule is unknown at this time (1530 Sunday), but we expect that reopening will take place within the next 2 weeks. Arrangements have already been made for our new location to be in the same block on N. Euclid.

The key to our ability to operate in a normal fashion will be the restoration of power and telephone service. Specific schedules will not be available until sometime on Monday, 24 January. Rest assured however, that HRO Anaheim will be up and running just as quickly as humanly possible.

Please pass along this information as you see fit and be sure to help quash any rumors that do not mesh with the facts as stated above.

Dale KB7UB

It was enough *at the time* to nudge the ARS out of the dark ages.
In Dec. '99, it was time for another nudge.

> Now we have the near final CB-ization of Amateur Radio...

That's what a lot of hams said when the no-code license was introduced.
It didn't happen. If CB troublemakers haven't flocked to the nocode tech
license, why would they study and pass a 5wpm Morse code requirement?

> At least the CW tests, while maybe not the most technically proficient,
> at least could not be fudged in this manner.

Of course they could. The Morse code was published in advance. They
merely rote-memorized the Morse code characters.

> Well, that simply reduces the quality even further, ...

That's simple to remedy. Simply raise the code requirement to 100wpm
and you'll get so much "quality" that the ARS will disappear for good.

> The whiners who only are interested in the easy route for themselves ...

What about the whiners who want to continue the easy federal subsidy
route for Morse code instead of having to expend some effort promoting
their favorite mode?

Like I said, it is never enough until they have simply turned amateur
radio into the sludge pit that is CB. The end result of the whiner
agenda is an absolute removal of any and all requirements, just like
with CB.

> > Now we have the near final CB-ization of Amateur Radio...

Most types like that look for the HF, not VHF. And I do not know about
you but *I* have noted a distinct decline in the quality of operators I
have been seeing even on the 2m repeaters.

> > At least the CW tests, while maybe not the most technically
proficient,
> > at least could not be fudged in this manner.

> Of course they could. The Morse code was published in advance. They
> merely rote-memorized the Morse code characters.

Excuse me but that is an idiotic statement. You cannot rote memorize 20
wpm. You either have the skill to receive at 20 wpm or you do not.

Check with most 'extras' after this nonsensical pollution plan is
enacted and you will find they have no clue about the theories they were
'tested' on even just a few months ago.

Quality has been dropped another dozen notches towards the LCD.

> > Well, that simply reduces the quality even further, ...

What ARE you ranting about? Where did someone get an extra class
license ONLY by passing the cw exam and not also by passing the written?

Where was this waiver for the written exam, Cecil?

I must have missed it.

Does anyone know where I can obtain ham radio software? I am especially interested in callbook information, or any programs designed for using as a station logbook, where you can type in the station called, and find out if you have ever worked that station before, name, QTH, etc. Thanks. No, my recollection that the no code license wasn't the first. It was giving 11 meters to the Citizens Band. However none of the events since may have been all bad. Today we have GMRS and FRS, what more could one ask for? Why just the other night my wifes purse woke us up (she forgot to turn the radio off) at 3:22 AM and alerted us to a drug deal in the immediate neighborhood going down! Now this is the kind of excitement one rarely hears on the ham bands :-)

As for scarcity of spectrum space, this is due to poor choice frequency allocations for TV. The VHF and UHF TV channel assignments are a waste. When I get to be King, all TV stations will be reassigned to Ku band satellite, opening up a huge spectrum of terrestrial frequencies in the process.

>don't go with the ADAMS software, what control cable do I use between my laptop
>and the VX-5R?

You need to build one that has approprate level shifters between RS-232
and the 5 V or 3 V used by the radio's serial communications. It also
needs to convert between the separate receive and transmit wires used
on the computer end and the single bidirectional wire used on the radio
end.

I've seen several different designs for these level converters on the
web. Someone sells a kit. I suggest spending some time with a web
search engine to find them.

>I see a "CT-27" Cloning Cable...is this the same as what comes with ADAMS?

No, cloning cables connect radio to radio. They are just wire and
plugs - no electronics are needed in this case. Buying a cloning cable
is a source for the 4-circuit phone jacks, but won't help you with
the electronics any.

"rec.radio.swap" is the correct newsgroup for items for sale, auction, wanted, etc.... "alt.ham-radio.marketplace" is also a good place for this.

"rec.radio.amateur.equipment" is for discussing the operation, technical aspects, and modification of radios (among other things), but not offers of items for sale.

So, why is there always such a high amount (40%+) of posts here offering items for sale?

I am thinking about buying an FT-980 Yaesu and wonder what you may have to say. I read about the Noise blanker problem In QST in the early models any other problems that are well known. The alternative is the ICOM 746 it's about the same price, I value other hams impressions.

Hey JIM, that is a nice call. You must be mistaken on your listing on
the FT980 Yaesu. That radio is about a 10 year old radio. I can not
see it costing the same as the 746. I have a 746 and really like it, I
had a Yaesu FT-980 and it sounded very good and was very big!! with no
tuner.
Take the 746 hands down over the FT-980

So when you combine sidewinder rattle sankes and two meters, you get those awful SideWinder On Two (SWOT) guys. If you go a little lower in frequency, they've got SMIRKs on their faces.

> check?

Jack-

You can probably do it with a pickup loop made from a couple of turns of hook-up wire. However, that may not be the best solution to your problem. It is possible that bringing any probe near enough to the 4 MHz oscillator to pick up a countable signal, will cause the frequency to shift slightly.

I suggest you connect a piece of wire to the counter input of the MFJ-259, and transmit from the TenTec into another antenna. Assuming that the 4 MHz oscillator determines the accuracy of the transmitted signal, you can adjust (or check) the two-meter frequency with this setup.

This brings us to one more problem: the MFJ can count, but it may not have the accuracy you need. I would prefer to receive a harmonic of the 4 MHz oscillator on a shortwave receiver tuned to 20 MHz, and listen to the beat note between the oscillator's harmonic and WWV. A similar approach can be taken if the MFJ has an oscillator with harmonics that fall on one of the WWV frequencies, allowing you to improve its accuracy.

2801. Kenwood TM-241A display trouble (and final amp)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-24 00:00:00 UTC
From: Gerry and/or Robin Lempicki <lempicki@psych.umass.edu>
Message-ID: <388cf409@oit.umass.edu>
Source record: 87586

I have 2 TM-241A's with display problems; one has been in the box for over a year waiting for me to do something, the other just went wacky two weeks ago. Now I really need to do something since they are both acting up. I have heard that the production run used a bad connector to the display; I have also heard that it just needs resoldering. I have taken mine apart several times and cleaned the plug/socket connection which seems to work for a while, but maybe I am just disturbing a bad solder joint and allowing it to work for a while? Can anyone who has worked on these be specific as to what they found/did to repair it? I would rather tackle these myself than send them out for repair.
Also, one of them appears to have a blown final amp. I am looking for help in finding one. It is a Toshiba, marked S-AV17 4G. Any pointers on where I can get one of these?
Please reply by email since I do not always get to read all of this group. Thanks! -Gerry KA1STZ

Maybe it's time for those who complain about such things to become aware of the realities of the Internet:

* YOU can't control what people do.

* SALE/AUCTION/TRADE items WILL be posted here no matter what you think or believe or what arbitrary UNENFORCEABLE rules are set down.

* YOU can set filters to eliminate anything with key words in it that bother you and thus lower your blood pressure.
(i.e. WTD, WTT, FA, FS, trade, sale, bay, auction, sell, equipment, and similar words - have them automatically deleted)

* YOU are obviously a NEWCOMER or you wouldn't be REHASHING this old topic over and over and over and over again! YOUR SPAM on these topics gets old after a while as well.

Learn to LIVE WITH THE REALITY AS IT EXISTS and don't waste your time and ours with your futile complaints!

Start spamming those who list what you don't like as suggested and you'll soon find yourself without an e-mail account as it is easy to trace where it comes from and ISPs do not take kindly to attacks of any type using an e-mail account of theirs and will readily cancel YOUR account(s) when notified of that type of activity as it is a violation of their Terms Of Service agreement which you agreed to.

This is, by a wide margin, the absolutely weakest, falsest of any points of argument for *or* against CW requirements. Just where are 700K plus US hams supposed to vanish to? Does the fact that there are a lot more licensed hams than there have ever been before escape the makers of this argument? Why do we need to grow? This smacks of the same foolishness that brings about the push for unlimited growth in economies. There are plenty of hams, and under the recently deceased licnesing system there would continue to be plenty of hams. The sky is not falling and there is no need to rush to 'recruit' tens or hundreds of thousands of new hams, period.

Any frequency allocated to amateur use may be used in the CW mode. Apart from 30 meters, there is little FCC regulation of where various modes may be used on HF. You haven't been listening if you can say with a straight face that "very little" CW communication is going on. Writing this at 1940 local, I count more than a dozen CW signals on the first 25 kHz of 40 meters alone. This is typical, for all bands other than 80M, where it is a bit less. I have never failed to pick out one or two CW signals on a given band, though often I find one band or another (or several) empty of voice signals. Perhaps you are mistaking CW signals for hets, or don't have the skill necessary to distinguish one CW signal from another close by? It is clear, however, that interest in CW, and CW use, is growing overall. The best evidence for this is on the bands as you read this, but can also be found in magazine articles and the inventories of companies that sell keys and CW accesories. It is one of the fastest growing segments of the amateur retail market. People are not operating CW because they had to take a license test, but because they like it, and because it achieves solid communication whenever communication is possible at all.

Apart from contest weekends, the HF bands simply are not overcrowded, not by any credible definition of that term. I have never tuned across any band and not been able to find at least one vacant spot that would accomodate a 3 kHz signal.

I am skeptical of the predicted mass influx to HF after April 15th. I don't expect to see more than a short term increase in activity. If these new HF hams come from nowhere, having just copped a ticket becuase it suddenly became available, I expect they will disappear to nowhere in short order, after the thrill of keying a mic wanes. There are maybe 50 thousand people, licensed and as-yet-unlicensed, who are paying attention and will be affected by the change. Some, who discover the pleasures of experimentation, homebrewing, DXing, collecting, learning, and yes, CW, will stay, but they will be the minority. We have seen it before, and it is after all a pretty normal human response: easy come, easy go. We will simply have to wait and see.

IMO, it would be a very good idea to recruit new hams to replace
the vhf/uhf hams who will now be migrating down to HF. I have this
uneasy feeling that 70cm will be lost in the not too distant future.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

there is too many adds in the ham radio section, they need more categories
to break it up, i cant sit there all day paging through thousand of adds.

I think you can blame most of that problem on the antenna. If I connect mine to the 6 mtr antenna mounted on the roof of my truck it works just fine. Course that doesn't help if you wanted to use the VX-5 as a handheld. Some have had better results with the Comet MH-510 antenna, but I've not tried it.

You might have just as much fun as anybody else, but you didn't pay the same PRICE as others.

I for one am sick and tired of the whiners who think that the bar should be lowered, just because they think it's "too hard". A LOT of things worth doing are hard. Making them easier simply cheapens the accomplishment. Be very thankful that your doctor doesn't use that same tactic.

It comes down to this: There are lots of us who DID pay the price, taking exams in front of the FCC examiners, without benefit of a PUBLISHED ANSWER POOL. We studied, we worked, we supported each other, we sometimes failed and often passed. But we did it right. You didn't.

Is it any wonder that many of us resent you?

Have all the fun you want. Your side won - the hobby is cheapened.
But as you brag to your buddies about your shiny new ham ticket, just think how much more proud you would be if you had actually accomplished something other than rote memorization.

Charlie, KS1C

Have an extra, new Eimac 8877 marked 9751. It is the one supplied with
my AL-1500 and has been tested (just now, by me, full output) but
otherwise never used. It is still in original Ameritron packing, and I
am unlikely ever to need it (I have two others, which ought to be enough
for at least a couple lifetimes). Sell for $395 + $5 to ship. Tks es

I beg to differ. This is a reason why people accessing the Internet should have to have passed an exam and screening.

I'd like to see the look on this guys face when the judge explains to him that it IS illeagal to take pictures of minors in the nude.

For sale:

Ten-Tec Scout 555 HF transciever with optional noise blanker, electret hand mic, mobile mount, and band module plug-ins for 80/40/20/17/10 meters, and the operator's manual. Works fine, used daily in the mobile going to and from work. Consistently great audio reports. Power output is 50 Watts PEP. Cosmetic condition is nice; a little wear on the cabinet, but the front panel, knobs, meter, display, and mic look fine. The mobile mount is a bit scratched up but not damaged. The noise blanker works well. Need to sell this rig... I have an Alinco DX-70T on the way and I gotta pay for it! $500.00 plus shipping.

Have an RS-35M in excellent cosmetic and electronic condition that is
superfluous to my needs (bought it to use with a big VHF amp, then sold
the amp). This is the METERED supply, very conservatively rated at 25
amps continuous, 35 amps surge. It sells new for $170. Will sell this
one for $100 + shipping. Tks es 73, Jan N0JR

2828. Radio's FS or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-24 00:00:00 UTC
From: gundoc <gundoc@iglou.com>
Message-ID: <388c5c5d@news.iglou.com>
Source record: 87613

I am Going to try to cut down on the amount of radios that I have because
1. I can only use one at a time.
2. I have too Many.

GE MP-D VHF 136-154 MHZ. This Radio is Programmed into the 2 meter ham band and is a great Radio. New large capacity Battery, Charger and has been converted to a BNC antenna connector. I have had a keypad face installed on this
radio but needs a new interface board to make it work. Radio works as a standard non scan MP-D. This radio puts out a little better than 7 watts and I can get into almost all of the repeaters in my area. Oh yes the Radio is intrinsically safe
as well as the new intrinsically safe battery (over $175.00) from GE.
$300.00

GE MP-D UHF This Radio is programmed into the UHF ham bands and is as great a radio as the VHF radio above. This radio has the standard antenna, a new intrinsically safe battery, Belt clip, and a charger. Standard non scan radio. Just to explain a little about MP-D's for the people that do not know they are 48 channel Alpha numeric radio's . This radio is very wide banded as I have ham and GMRS repeaters programmed into it and it is just as good at both ends of its split.
$225.00

GE MT-L UHF This radio is also programmed into the UHF ham band as well as a GMRS repeater. Radio is a 16 channel scan version that has slight wear on edges. comes with charger and new Intrinsically safe Battery and yes the factory antenna. I like this radio it is a poor mans MP-A and works just like an MP-A select. With the new
battery $250.00

Kenwood TK330 UHF. This Radio is in the 450 - 470 split and is not programmed
by me into anything. I can hear my local police on it so I know it works. Radio is a 10 channel with scan and is programmable. I do not have a charger for this radio I have been charging it on a universal charger just to listen to the Local police.
This radio looks great and still has the speaker mic cover over the connection.
1600 Mah battery and antenna.
$150.00

Icom U18 UHF . This is also a 450 - 470 split radio and I have not tried to get it programmed onto any frequency yet. I have been listening to local businesses on it and finally figured out I was listening to a garbage collection company. Anyway this is a 16 channel scan radio with a radio

shack battery that can be charged with a wall wart charger. Radio is in great shape and will take a large assortment of batteries from commercial and Ham Radio's. And it uses a standard 2 prong
Speaker mic.
$125.00

Maxon 2850 UHF This is another radio in the 450 - 470 split that I have and have not used for anything. Radio is working but not programmed to anything I can pick up. But I can talk to it and hear it with My FT50. Radio is 10 channel with standard Battery and Maxon charger.
$125.00

Mobiles

GE MVS UHF radio This one is in my van right now and is my UHF ham radio. This is a 25 watt UHF wide band radio that will do ham band and GMRS and the best part is it is 128 channels and I have all but 14 programmed into it. Radio will scan 16 frequencies at a time and is another great GE product. The only reason I am selling this radio is I am trying to cut down on the radios in my van. It looks like mission control with all the single radio's. I need to get a dual band radio to take it's place.
$250.00

Motorola Mitrek UHF Radio's I have two Complete 50 watt radio's that would make great link radio's as they are 410 - 430 split. I bought these with this in mind. They come complete with cable, single channel control heads, Mic, and speaker.
$40.00 ea.

Well that is it for now I may have a few more radio's out in the garage if so I will post another ad. As usual I will consider offers and trades for other radio equipment
Dean

It sounds to me that you are the one whining. As far as the comparison
between
code and doctor. My life doesn't depend on you knowing CW. Let change
this
just a little. Forcing a ham to learn CW is like forcing a programmer
to learn assembly. Some programmers enjoy it, most do not. Learning it
provides
nothing to the craft and can cause bad habits. I don't want to see CW
requirement
go away, but I can't give you a good reason for it.

Yes, a lot of things worth doing are hard, but no one has been able to
make
the case that CW is worth doing TODAY unless you enjoy it.

Times change, tech changes. Do you also resent the person that buys a
400 Mhz
P3 for $1000.00 when you paid $4000 for you 286?

Get over it. Times will always change and if you try to hold on to the
past
you will end up being a bitter person.

Why do you resent the test-takers? Test-takers have absolutely
no choice except to take the tests that are offered. It is not
the fault of the test-takers that the price has been lowered.

It does no good to post and answer to spam in a newsgroup. Spammers post their spam to hundres of newsgroups and they never see any reply messages. You need to complain directly to the hosting site.

Hey, the bottom line on ham radio is that it is a hobby. If you were so
miserable "paying the price" to get your ticket, then why'd you do it?

Judging from the list of addresses embedded in here, it looks to me like
somebody has a beef with PacBell.net and is trying to harrass their
support lines by filling them with porn complaints. I don't think
there's any real porn going on here. It almost looks like the jerk got
shut down for spamming & isn't willing to pay the penalty.

He'll probably wish he had when the police show up at his door.

I never said I was miserable. I "paid the price" because it was a the goal was worth the effort. It was hard work, but that makes the attainment of the goal all the more rewarding.

It's like a guy who trains for years to climb Mt. Everest. He makes it to the top, but only after a lot of training, planning and effort.

How do you think he feels watching others getting airlifted to the top, so they can have their picture taken for posterity, bragging to everybody that they too made it to the "top of the world", just like all the other adventurers?

After all, technology marches on. Airplanes can now take you there, so why go through all the struggle doing it the "old fashioned way"? All that climbing seems silly now that there's an easier way.

Either way, the accomplishment of getting to the "top" is cheapened.

Aren't we bitter about this. Tell you what... SELL all your equipment break them all down into kits, like they were when you bought them. That way you won't have to deal with us CAKE-EATERS anymore. With attitudes like yours, this Hobby / Service, would die out with the likes of you. Sorry about the restructuring but I had nothing to do with it.
When I go to Club meetings and events, what is it I see? One kid in High school, Two people in their 30's (me included), and twenty plus 50's and above. Hmmm, tells me we need to open it up a bit, maybe not as much as they did. We need to get some younger blood to keep it going at all. Just because the minimum requirements have changed, doesn't mean that is all you are allowed to accomplish. I don't have to lower MY standards. I will still be striving for 20wpm in code because that is the goal I have set for myself, but I will use every advantage available to upgrade my "ticket" at the earliest possible moment.
Your having to walk 5 miles to school in the snow bare-foot and uphill both ways attitude does NOT impress me.
My 2p

Kinda funny, all this bitching... Its time to stop, since Amateur
Radio has alwayz changed at sometime. Even before these grumpy old
farts got tickets. They didnt bitch about it then, Why now?
I dont know the whole history of Ham Radio, Nor do I peticularly care
to learn it since I only want to know what I learned in my experience
with it.

You old timers were happy when you got your tickets, but think how the
elders of ham radio before your time felt about you getting your
ticket?

Quit being a bunch of foolish BS'ers and accept it...

2844. FS: Yaesu FT726R Satellite Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-24 00:00:00 UTC
From: keithp@conninc.com
Message-ID: <86hrda$q69@edrn.newsguy.com>
Source record: 87629
Cross-posted to:
alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.space,rec.radio.swap

For Sale: Yaesu FT726R 144mhz/430mhz satellite rig. 100% operational. 2 modules installed. 2 meter module and 430mhz satelitte module. SAT module also installed. No microphone. Manual included. Copy of service manual also available.
1200 & 9600 Baud Packet Ready - 2 DIN plugs for connection to TNC
2 recieve preamps - both switchable in and out of line
Enhanced 144mhz recieve modification. Better S/N ratio. Easier to hear weak signal.(Documented and instructions included. Article published in QST in 1987.)

Reason for selling is I have 2 of these rigs and only need one.

$500.00 plus shipping CONUS.

May consider trades for VHF/UHF Amps.

Keith KD4AVP
keithp@conninc.com

This is a fact about the TT-555 scout. If you do not run the scout at a solid 12.8 volts DC the Scout will have all kinds of problems. The internal voltage regulator needs at least "one volt" (1 volt)of overhead to regulate at 12 volts. It if you do not have this you could even get a card from OO. I did. I found out that running the Scout off a battery does not work, becasue a battery can not stay at 12.8 volts unless it's fully charged, and it does not stay at full charge for long. So if you run the Scout mobile you need to have the motor running, or your battery needs to be at full charge. The scout will drift, sound like RF it getting into the receiver, sound like you have RF into the audio on TX to other stations. I like my Scout and run it mobile every day. But I now never run it at less the 12.8 volts. I called TT service, they verified what I just told you. There Delta rig had the same problems. If you want to run it at 12 volts the regulator will not regulate.
Jim, WA7NDD

2847. Death Spiral of Amateur Radio accelerates

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-24 00:00:00 UTC
From: thanatos999@my-deja.com
Message-ID: <86i29fncc1@nnrp1.deja.com>
Source record: 87632
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of) WT Docket No. 98-143
)
1998 Biennial Regulatory Review --) RM-9148
Amendment of Part 97 of the Commission's) RM-9150
Amateur Service Rules.) RM-9196
)

If anyone has read this the LCD (non)thinkers get their way again.

First it was the 'no-code' license... "That will be enough" they said.
I knew that was BS... and history has proven me right.

The it was the much abused 'disability waiver' which I said long ago
would cause rampant fraud and undermine the amateur radio service... few
believed me and even though I am disabled I was attacked as someone who
bashed those with disabilities.

Again, history proved me 100% correct.

Now we have the near final CB-ization of Amateur Radio...

a 5 wpm requirement for Amateur Extra with written exams where the
questions and answers are publicly available and easily 90% of those
passing the 'exams' (memory tests is more like what they are) will not
have any clue as to the actual workings of the theories they are being
'tested' on.

At least the CW tests, while maybe not the most technically proficient,
at least could not be fudged in this manner. You had to actually be
COMPETENT in cw to pass the 20 wpm test.

Well, that simply reduces the quality even further, and unfortunately I
fear that before the end of the next sunspot cycle Amateur Radio as we
know it will cease to exist, being replaced with something akin to the
sludge pot that is 11 meters.

The whiners who only are interested in the easy route for themselves and
the profiteers who only have dollar signs in their eyes seeking to seel
ever more radios win, and the hobby loses... again.

Dammit, sometimes I really hate being right.

And I really likes Amateur Radio... I fear I will not be able to say the same soon.

FYI,

Although the TM-241 is out of production, the manual is still available
for downloading from the Kenwood website. Select the manual for the
TM-541 1.2 GHz rig (which is still in production) and download it. The
same manual covers the 241, 441, and 541.

The later 820's had it. Only the 520's don't have built in readout. The
820,530,830 do. Also the 180,120,130 for solid state older kenwoods. Of
all of them I prefer the 530,830, 130. The digi VFO's will work with
them. Much more stable. The vfo-230 for the 530,830, and the dfc-230 I
believe is the number for the 130. It's smaller than the vfo-230. More
for mobile use. MK

Contrary to some of the comments, you are very correct. The ARRL license manuals of the early 60's were general guidelines and rarely were the questions and answers exactly repeated on the exams. Also there were usually schematics to identify, draw or fill in missing components. Some of the questions were true/false, multiple choice, "fill in the blank" and some were "completion". I took Novice, Conditional, General, Advanced (twice) and Extra. The Extra was actually the easiest (yes, I bought a Bash book) but the 20 wpm was a bear with one minute of perfect copy required when they put random letters, numbers and symbols in the middle of the text. No multiple choice on the code.

I take a lot of self-satisfaction with getting my Extra but I don't really worry about what other people have to do to get their licenses. I don't really think it will affect me much....I doubt if you'll find too many QSO's at 5 wpm in the Extra portion of the bands.

Statements have been made that a license is the "entry point" to ham radio. Not always the case with the Extra as you had to have a year of experience before you could sit for the Extra exam.

YES! You hit the nail on the head. Homebrew a radio or build an antenna
then use it to work the world. Now, that's something to brag about. A 16
year old brags about getting a drivers license while a 18 year old brags
about his first car and a real driver brags about his journey.

Okay... here we go again...

Who's the keeper of this newsgroup? Every newsgroup is supposed to have one person or organization who oversees it. I'd like to see the charter for this newsgroup, and see where it says that buy/sell/trade ads are not permitted. If that's the case, I will gladly stop any and all such postings to this newsgroup. I have no problem following the rules, as long as they're made available to me. Until that time, I'm not going to take seriously anyone not in a position of authority who whines and complains.

73,
Dean / K5DH

How would CW stop this? All we'd get is:

.- -. -.-- -.-- --- ..- -. --. --. .. .-. .-.. ... etc

CW is not an acceptable behavior filter. In fact, if I had a dollar for
every time I had ... . - and ..-. ..- and so on sent to me (at high
speeds even!), I could buy my 20 wpm code test and have a "real" Extra
license before they go extinct. :-)

2870. Dirty Dealer Robertwhite@AOL.COM

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-25 00:00:00 UTC
From: BamBam <kl0an@my-deja.com>
Message-ID: <86kkkhjuc1@nnrp1.deja.com>
Source record: 87448

In early December I made contact with this individual Robert White (W1HF) of PeaceDale, RI and we arranged for the sale of his Hustler 2 meter antenna. I sent him a money order for the agreed upon price of $20 and when he recieved it he wrote back stating that the shipping was too much via UPS or whatever he was using. I replied and asked him to send it USPS Ground or cheapest way possible. He replied that he would and also that he sent it. After three weeks I sent him another e-mail asking about it and he said he sent it. That was the 28th of December and I still haven't recieved the package or anything from Robert White. I've e-mailed him a couple of times the past week and he doesn't even bother to respond.

Be aware of this guy. He sounded like a decent person in the e-mails back and forth but, now I'm out $20..

If you know this guy personally, make sure you tell him about this message, I'd welcome any response from him.

All my other deals thru this newsgroup have come out well, it's a shame that one individual has to ruin a perfect record.

And yes this will be cross-posted to a couple of other newsgroups because I feel it's important to warn other newsgroup users of dirty dealers. Sorry for the inconvenience.

Face the facts Will. We CAN'T just 'maintain' our numbers and stay the
same. If the number of HAMs doesn't increase with the increases
elsewhere, HAM radio WILL be cut back. And with the cutbacks, it
will attract less and less, and be cut back more and more.

Those with their head in the sand will never realize the end was coming,
until it's too late.

Frankly Will, I think those that try to maintain the 'status quo' in
both
numbers and privlidges have their head somewhere else that's dark.

Hey, GREAT on the upgrade!! Now you'll find out how much fun
CW really can be!!

And I wish to applaud you that you aren't falling into the "I did it, so
should you!" trap that so many people seem to. If CW has not
other justification than that, then it should not only be eliminated
as a requirement, but banned. (Oh boy, get out the asbestos jock
for that comment!)

Yup.

> I would assume that if
>you do a callsign search it will continue to show an Advanced class as
>just that, which would tell you that they passed the 13 WPM.

Actually, one could have an Advanced as a result of 5 wpm and a code waiver.
Plus some Advanceds (like Cecil, W6RCA) did NOT take their code tests in an FCC
office or a modern VE session.

So having an Advanced is no proof of 13 wpm. No proof at all.

It's simple. Most hams nowadays operate store-bought rigs. There's not
that much to do to them, technically. Really, buying and selling such
rigs, and accessorizing them, and getting them repaired, is about as
much as most hams do to their transceivers these days, so it's only
natural that those be the main topics here.

The grave. The average age of today's Generals is 63. In another decade
they will have reached the age of average male mortality. That means
roughly half of them will be dead. So we need to somehow replace roughly
half of today's Generals over the next decade if we just want to maintain
today's numbers.

Hello, Ed and the group!

The 736 does not like to transmit between 30 and 44 MHz, due to chokes and the like.

My suggestion would be to swap the crystal in the transverter and use 26 to 30 MHz as the IF.

73!

Yeah, they've got a whole shipment of TS-950's and Alpha Amplifiers
that have just a slightly scorched packing box that they're asking
$50.00 for. Call them at the 800 number.

2888. Ft890 & cwfault ?

hi thanks for reading,

i have an ft890 that works fine on all bands and all modes except
cw, it will only put out milliwatts on cw ?in semi breakin and full.
i know it has not been modified for qrp as i bought it new.
i have tried all the usual things ,but still can get only milliwatts
out of it.
when you push the tune button on atio tuner in cw mode it will then
display full power for a split second as would be expected.

any help or info would be a blessing!

thanks in advance

So????

What's the point, since nobody is required to do 13 wpm for
anything after April 15? Is this simply more "bragging rights
fodder?"

Is that a particularly important objective? The Amateur Radio
Service should be managed in a fashion which increases it's
'PICON' value. That objective might have no direct relationship
to maintaining "today's numbers".

> The RS adapter costs about $20.

The ATS-909 also comes with a spool antenna that I find useful. But the
best over-the-counter price I've seen for the ATS-909 is $240; and for
the $40 you can buy both an adapter and a spool antenna from RS, and
have a bit of change. Of course, the "normal" RS price is $250, which
would make $240 for the Sangean a better deal (except for availability
of RS stores, good RS return policy, etc.). BTW -- the one I have is an
ATS-909, purchased when that was a better deal, and modified by adding
Kiwa narrow IF filter and disabling the mute while scanning.

Hi to all I just picked up a used Yeasu FT-1000MP. At some point, one of the previous owners turned up the power level pot to about 150 watts. I drive an Ameritron AL-1500 and I really dont want to overdrive it by accident. I need to know where the power level pot is so I can put it back so that the maximum power will not exceed 100 watts. I understand there are some menu features that will limit your power, but this has no effect on it. Thanks in advance.

> >
> > 73 de Jim, N2EY
>
> So????

Ya came in late and missed the first act, Carl old boy. Cecil has been expounding for a while that after April 15 the only "real hams" will be Advanceds, and they won't have to pull out their licenses and show that they were earned in the bad old days >5 wpm code testing. Yada, yada, yada, he's gotta have SOMETHING to brag about or he'll just bust.

He's pulling our collective leg, of course. So I gave him a tug back. Can't let a good ol' boy go unchallenged like that. He'd think we didn't like him anymore.

> What's the point, since nobody is required to do 13 wpm for
> anything after April 15?

Ask Cecil. He's the one making all the claims. Me, I just point out the facts. I was an Advanced from 1968 to 1970, by the way. All "old-style" Extras were also Advanceds, too.

> Is this simply more "bragging rights fodder?"

Aintcha learned yet, Carl? EVERYTHING is bragging rights fodder! Human nature.

One guy builds a 2 meter rig out of through-hole parts, and there'll be another guy telling about how he built one out of SMT that performs better and costs less, etc., etc. Been that way since before the pyramids were built.

("Oh yeah? Well, in MY day we didn't have these newfangled contraptions with ROLLERS. We DRAGGED the stones - we weren't weenies who needed ROLLERS just to build a lousy pyramid! Now some of these lazybones are talking about something called a wheel. Grinding grain, that's what wheels are for."

"What's the Lower Kingdom coming to, anyway? Place has been going downhill ever since Ramses wimped out with that Moses guy. Listen to these new builders yapping about the 'state of the art' and 'post and lintel design'. We had REAL builders - we had state of the art whips! I tellya, next thing ya know we'll all be speaking Greek or something.")

You watch - if/when the code tests finally go, there will be folks moaning about how THEY had to pass 5 wpm to get on HF, but these new miserable pudknockers don't hafta know a dit from a dah.

And the new writtens? Don't even go there.

But it ain't braggin' if ya really done it.

I doubt it. The news reported that the businesses were "totally destroyed." It's likely nothing survived that would be in any condition worth selling.

Excellent response Cecil!!

But I would point out how assinine the original post was, since for
years
the answers WERE published. And there wasn't a large question
pool to choose from like there is now.

They were published in the BASH books.

They were a source of controversy for years, and were quite popular.
Having a large question pool effectively shut that down.

Hmm, is the original poster complaining that the only value to his
license is it's proof of having done a deed? Not of him being a good
operator? I suspect he's not!

I suspect he feels like he spent 4 years getting a degree after which
his college started handing out identical degrees for 2 years of work.
He doesn't realize that a ham ticket is a permit to start attending
kindergarten, not a graduation certificate.

Talking to Dale, who works there, it is a TOTAL loss. They will be working out of Burbank for a week or two and have another storefront a block away they are moving in to on Euclid. It should be open in two to three weeks and will be all NEW and larger. As for the gear inside, does anyone know the meaning of carbonized? The fire was a "surround and drown" fight by the FD. Fire started in neighboring Dentist office and consumed most of the complex past the water store. Dale posted me a picture of the store front on Monday and I can say what a mess.Roof is gone and you can see through the front all the way to the rear daylight. Dale said there is NOTHING left to sell as its all melted and carbonized on the floor. All phones for the Amaheim store are forwarded to Burbank for now.

Wow! Finding a large store front in that area so quickly is really a
lucky stroke. Good news, since it is about a 45 minute drive (and I'm
out that way quite a bit anyway).

I have a (Magnavox) "Mid 50s" All-Wave, All Transistor Portable
Radio. Model AW-100. Covers 540 Kilocycles to 22.5 Megacycles
in 4 bands. Is in very good condition. Scale 1 to 10 it's a 9+. Runs
on a internal 9 Volt Battery or external 9 volt power supply. It is
12" wide x 5 1/4" deep x 7 1/2" tall. Has a 52" telescoping antenna.
Also have original owners manual. JPG on request.

$200.00 firm, plus shipping

I need some help with the external mic set up on my Yaesu FT-50R. I have the adapter so that I can use the two plug microphone. I am using a radio shack speaker mike with it. Sometimes the Radio won't unkey when I release the PTT button. Other times it works fine. Any ideas on what could cause this? I am using the Yaesu adapter if that helps any. The Radio Shack mike stock # is 19-314.

Thanks in advance.

I agree. I don't see much use in programs which merely mock up the
front panel of the radio on the computer screen. I'm much more
interested in software that acts as an adjunct to operation of the
radio, particularly if it's customizable. E.g. logging software which
reads info directly from the radio, custom 'widget pads' which make
functions that are normally clumsy to get to from the front panel
easier to work with, backup and restore of radio settings, additional
'memories' that are stored on the computer instead of the radio, etc.
It would be especially nice if more than one program can access the
radio at the same time.

This is why one of my ongoing projects is writing software for my
current radio and shack computer(which runs Linux), and making some of
it available as open source software so others can do the same. E.g.
see my announcement of the Radio::DX77T perl module.

From: Ben Coleman <nj8j@mindspring.com>
Message-ID: <awwzvaqfcevatpbz.foxck64.pminews@nntp.mindspring.com>
Source record: 87494

If you've got an Alinco DX-77T transceiver, know Perl, and are interested in writing software to talk to your radio, this might be of interest. The Radio::DX77T Perl module provides an OO interface to the DX-77T computer control protocol. Currently, it is geared towards operation on a POSIX-compatible O/S, but porting to other O/Ss like Windows should be possible with changes to only 2 methods. Patches are welcome.

Radio::DX77T version 0.01 is available at the bottom of my home page(see signature) and should soon be available via CPAN(as soon as I get my PAUSE id, and check on whether the name is appropriate or not). Comments are welcome.

The answer to your problem can be found on page 64 in July 1999 QST. The article talks about a clear film that rotates light 45 degrees (from Edmund Optics). I tried it and it works. Although you have to tape the film to the front of your V7A. I traded in the blue V7A for the new D700. What an improvement in the new amber display.

One of the most underrated transceivers that was ignored by the big contest stations was the FT102, it was designed by the same engineer who designed the FT1000D. The receiver has 3rd order intercept points equal too or better than most current radios. It lacks all of the phase and digital noise that plagues most of the latest generation of radios. Alongside a FT1000MP the FT102 kills it. It has some minor bugs in the output relay department but when this is solved its in my opinion a killer radio. The transmitter 3rd order IMD was one of the best that Arrl measured, at -40 db. It also has great power output. But for some reason it never took off. But this is typical of products of excellence they dont seem to work in the market when junkie type products succeed. Why is it so?

Does anyone recall ever seeing instructions for the diode programming procedure on an ICOM IC-22S FM transceiver?

I have someone really needing help with it.

If anyone has an old manual with the onformation or access to an index of 73 Magazine etc., I know there were some good articles back in the early to mid 1970s about these rigs...

Anyone able to help?

Thanks & 73

2932. WTB: Dualband HT

Greetings,
I am looking for a Dualband HT (2M, 70CM)... It needs to have TX on the high end of 70CM (464.000MHz) so that I could use it at work. This unit is for a friend who doesn't have a computer so I am searching for him. He would like the unit to be in the range of $200-250. If you have anything, please drop me a message telling me details. Would like Alinco, Icom, Kenwood, ADI, Standard, or Yaesu.

Thanks for your time... and hope to hear from someone soon.

Jeffrey - N9MXT1@AOL.COM

Dont even go there. This CB'er is an acomplished ham operator, The call sign proves it. By the way, Its not yours to turn over, Its everyones. No one is turning anything over to CB'ers, What gives you the idea that it will be? I for one will back up other hams before I sit idleing by while the ham bands go to the CB'ers but, It isnt going that way. If for one instant you think that you are a pride of your band, you are dreaming. The operators that help and make Amateur Radio a better place are those that are the pride of the bands. Code doesnt make you a better person, nor does a ham license, It is how you act and what you stand for that partially makes you what you are.

Now back to the topic, That is what this post was about, I sit here and laugh at everyone one of you because you cry and whine like little kids that can't even change there own diapers. You will either accept the change and continue to enjoy Amateur Radio or you will accept it and sell your gear. You dont have a choice in the decision. The majority spoke and the people have won. Do like others in the San Francisco bay area have done, Put up a GMRS repeater and isolate yourself from reality. Oh, They are now back on Ham Radio because they had noone to talk to. It is so sad that you cant encourage people to get there tickets instead of bashing them or making accusations. Only a weak person bashes people.

Are you one of those who brag about your code speed, but have never left VHF? If so, you might as well call yourself K6CBL.....

I own a Q7 and overall find it a great radio for the money. Advise if I can elaborate on my comments. If you have large hands, try this radio before you buy it...it's quite tiny.

Positives:
Great audio for the size of the radio
Good sensitivity
Dual band
Modifiable to rx from like .5-2000 MHz without opening the radio
Ability to scan all bands and modes - VX1 can only scan memory channels in one band at a time without mod.
Fairly easy to program, but very easy to program with downloadable program
200 memories
Numerous scan patterns

Minuses:
300/350 mw output - cant expect much more from a tiny radio
Slow scan rate - 15 ch/sec (approx)
Impossible to operate with one hand and difficult to use mobile - function key is used for almost all functions and function + dial is used for most settings
Only 2 memory banks
Prefer a BNC connector
Non standard speaker mic conector

Are you kidding??? That was what the nocode tech was
supposed to do. It didn't work then and sure won't now.
Now that you idjuts pursuaded those others at FCC to just
open it all up to all comers, who do you think wants to stay
on VHF and up?
NO ONE!!!

There are alot more Hams for sure, But they mostly make up the VHF/UHF bands. Makeing the code requirement lower will cause alot of those hams and some new ones upgrade and make more use of the HF/MF portions of the band. Also there are more people in the US than there used to be, That kind of explains a little more of the excess hams. Also take note that the Radio market will increase due to more buyers. I believe Ham Shops across the country will not whine about it. I dont believe the Manufacturers will either. I guess this also will help step up the economy, Not by much, but it will. Anything else you want to snivel about???

Found this in the internet.....it worked for me....

Remove the bottom cover...
1-2 inches from back of rig on that main board and about 1-2 inches to
the
right of center....look on the board for the marking "BC ATT"...there
are
two options "norm" and "dx.
Just change the jumper.
Thats it!!
At least they made it a jumper!!

Hello Clint,

I have downloaded EVE ver. 1.70

When you load up the program its default is "Japan" in this box to the upper right. When you select "USA" it goes red in the back ground and to the left of it in red it says "This is a mod file"... Would you normaly select "USA" from this menu when programming your VX-5R? What does this mean?

I haven't got the control link cable yet from RT Systems... I e-mailed them yesterday with no response yet.

Thanks Clint!

Who cares? I sure don't. It's a hobby. The reason I'm in that hobby is
to have fun.

>I for one am sick and tired of the whiners who think that the bar should be
>lowered, just because they think it's "too hard". A LOT of things worth
>doing are hard. Making them easier simply cheapens the accomplishment. Be
>very thankful that your doctor doesn't use that same tactic.

Being a doctor is a profession. Amateur radio is a hobby. No
comparison. Maybe that's why ham radio licenses are issued by the
Federal Communications Commission, rather than med schools.

>It comes down to this: There are lots of us who DID pay the price, taking
>exams in front of the FCC examiners, without benefit of a PUBLISHED ANSWER
>POOL. We studied, we worked, we supported each other, we sometimes failed
>and often passed. But we did it right. You didn't.

It comes down to this: Who cares? It's a hobby, it's not nuclear
rocket science. Getting the license is the beginning, not the end. The
accomplishments that are really meaningful are the ones you attain
after you get the license - like DXCC, WAS, etc. Did the FCC R&O
change the physics of radio wave propagation? No, it did not. So the
game hasn't changed at all. They've just made it easier to obtain the
license one needs to have in order to play the game.

>Is it any wonder that many of us resent you?

Coming from someone who apparently considers your license to be some
sort of status symbol, your attitude doesn't surprise me a bit. Don't
be surprised to find out that the resentment bit works both ways.

>Have all the fun you want. Your side won - the hobby is cheapened.

Only for people like you who think the license is the ultimate
accomplishment in ham radio. It isn't - it's only the beginning.

>But as you brag to your buddies about your shiny new ham ticket, just think
>how much more proud you would be if you had actually accomplished something
>other than rote memorization.

If getting your license is the *only* thing about ham radio that *you*
have to be proud of, that's *your* problem, not mine. As for me, if I

someday achieve WAS, DXCC, etc. my pride in those accomplishments will not be the slightest bit diminished by the fact that I didn't obtain my license under the same rules you did - for you see, for me, getting the license is the opening kickoff, not the final gun ending the game.

In theory, this will happen when the current AM NTSC transmitters are
phased out in 10 years. But I just don't believe that everyone will have
gotten rid of all their old analog TV sets in the entire USA in
10 years, nor do I believe that people who have old TVs will quietly
junk them when analog broadcasting is about to cease. No, they will
complain, and make lots of noise at it. I wouldn't hold my breath
on getting that spectrum back.

The meter part is normal (just the tubes warming up). If you have a side tone, it means that it is transmitting and probably ruined the EXPENSIVE 6LQ6's. Make sure it is not in the tune position or keyed down for any reason. The Swan's were notorious drifters. They were inexpensive compared to the much more stable Collins or Drake rigs that used a permeability tuned oscilator, vice a capacitor VFO like the Swans. If you can't afford a Collins (KWM2/S-Line), a good Drake TR-4 sounds pretty good and is a lot more stable. I got hooked on "Boat Anchors" with a Swan 500c (and knew very little about them at the time). Now I have racks full of the them (tube radios), mostly Collins, and loads of tube type test equipment. It gets in your blood! If you don't have a manual for it, they are easy to obtain, one source is http://www.sarrio.com/sarrio/rsfinal1.html. That will give you a good start, not to mention schematics and trouble shooting procedures.
Good luck and Welcome to the world of Boat Anchors!

Source record: 87540

My AR-147 doesn't like cold weather. When the temperature drops, it transmits a string of single tones as long as the PTT is engaged. When (and if) the radio warms up enough, normal operation begins. The radio has been back to ADI twice without success. They have added a choke to the mic cable, and modified some resistor pack inside the radio. The only way to make the radio useable in cold weather is to disable the DTMF module, but that also disables most of the remote control available from the mic. Any ideas?

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

Mike,

I have a JRC JST-245 which covers 160 - 6 M with 150 W out which works
well on 6 meters. They are available used and new and have a very good
receiver.

>
>When were these radios built?
+- 1983/84

>How many antenna connectors are available?
One per module ie 10/12/15m module, 6m module, 2m module and 70cm module
although only three modules can fit inside the radio.

>What is the output?
10W per band/Module

>What are the differences toward the "R" version?
?????????

>What should I look for when inspecting the radio?
Is the satellite unit installed. This is an option and a nice one to
have......

>Are the 10/15m bands installed on all radios, or was this an option?
Option. Was sold stock with 2m module only. There are also two options on
the 70cm modules, one covers 430-440MHz and the other 440-450MHz.

>What do you think about this radio?
Very nice although lacks the new bells and whistles....wish it had tunable
memories....

2965. BIG CW transmitter wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-26 00:00:00 UTC
From: Jim Berry K7SLI <basalop@gte.net>
Message-ID: <enwj4.2540$K26.47944@dfiatx1-snr1.gtei.net>

Hello Everyone,

I would like to find a WWII USN TCK transmitter. Have looked for years and have had no luck. This old rig used a pair of of 813's for finals and was rated nominally at 400 watts out.

Since I have been unable to locate a TCK, I am also looking for something similar. Say an ex commercial rig like a Mackay Marine that uses a pair of 813's.

Wish I had all the parts, I would build a transmitter using a pair of 813's. If you know of a homebrew one that needs a home let me know.

I would prefer a real grid driven transmitter. Not a GG rig. I do need a power supply (both plate and for the screens), control circuitry, a rack cabinet etc. Guess what I am saying is if you know where I can locate any part of transmitter, I might just be interested.

Ah heck, it does not even have to run a pair of 813's. Just be in the 500 watt output range, cover the ham bands, and I do not need any kind of modulation system since the rig will be used on CW.

I would sure like to find something in the PNW. The shipping cost of one of these big rigs can get a wee bit spendy, besides the hassle one has to go to just to pack the thing.

If you have any info, drop me a note at basalop@gte.net.

Not quite as elegant, but awfully inexpensive AND funtional:

A pair of steel bookends from your local stationery store. Three bucks a pair.

"Re-form" the angle of the upright section, and each bookend will hold 2 HTs each (or 3 VX-1R HTs <g>) at the proper angle for viewing.

Black...steel grey...fake woodgrain...enough options to match any desktop!!!

There was a problem with the early run FT 100. It was a a couple of screws that were just a bit to long and would short the RF module. They have corrected the problem. I have just bought one myself and couldn't be happier with a radio then I am with this one.

Remember is was bitching that got the rules changed in the first place!
That and pressure from the Japanese ham manufacturers I would guess.

Gary

I pasted this from a message I saved last year. I have not used this
item nor am I connected in any way with it. Just passing the information
along....
==========
Custom Designed Scanner Stands, will also work well with Yaesu FT-50.
Black
wood base with rubber feet o bottom to protect furniture, adjustable
angle
bracket uses belt clip to fasten radio. Turn your HT in to a base, don't
have
it fall off the table. $11.

VHF Hi- UHF J-Pole Antennas..... great for apartment dwellers or hotel
use.
Hang from a curtain road or tree limb. Also good for transmitting on the
2M &
70CM ham bands.... $18.

Shipping by Priority Mail: two Items $4, one item $3.

2983. D-104 mic parts needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-26 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <ahLj4.1200$ag.21768@dfiatx1-snr1.gtei.net>
Source record: 87372
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I am in need of the male and female plastic connectors that connect the Astatic D-104 head to the mast - both are damaged in one of my mics, and must be replaced. I *don't* want or need a complete mic - only one or both parts, depending on what may be offered. I am aware there are near-substitutes available at audio stores, but the are NOT exact matches, and their use prevents interchanging other D-104 heads, and I use several. Naturally, I'll be glad to pay a reasonable price for the parts/shipping.

Thanks.

I would not worry about the hum you heard. You are picking up the residue of suppressed carrier. Try transmitting into a well shielded dummy load and then listen to your signal with another receiver without an antenna.

Hi Group:

I want to thank all those people that helped with advice and microphone suggestions for my HW-101. I had my first contact in 10 years thanks to all of you.

I bought a Yaesu YD-844 50K ohm microphone from Purchase Radio in Ann Arbor, MI. I had to rewire it to fit the 4 pole connector on the Front Panel of the radio. Simple job.

I then took my time and built a multiple element multiple band Dipole antenna. I just got through with a contact in New Jersey / New York area. WA2YXC is the call and it had a nice audio and some fade in the distance. But, the system works.

Thanks again
Curtis Scholl

It's pretty much impossible to work HF mobile with my new Ford Power Stroke. The general opinion seems to be that the most obnoxious comes from the injector solenoids.

Has anybody actually managed to solve the problem on a Fords PSD (no theories please)?

Thanks

Paul

Have you tried going directly to Astatic? They are still around and I
recently purchased a new crystal element for my unit. The can be
reached at:

CTI Audio, Inc.
341 Harbor Street
P.O. Box 120
Conneaut, OH 44030
(216) 593-1111
FAX: (216) 593-5395

Their web site is http://www.ctiaudio.com/ (although www.astatic.com
seems to work also but has some bugs). Their tech support can be
reached at support@ctiaudio.com.

I also had this problem on a Kenwood when missing a chassis ground. I had
good power leads to the radio from the battery, and a ground from the radio
chassis to the vehicle...when loading the truck one day I ripped off that
chassis
ground and had instant problems locking in tx. Repaired the connection and
all was ok. RF will do strange things!

I just got a HW-16. Do both lamps light when ya plug it in and turn it on?
The lamp behind the "tuning dial" on mine doesn't light and I wondered if it
just lites at certain times, or its burned out, or what. What size is the
bulb? Can I get it at the local RS?
Thanx in advance

There's Amateur Radio Center, 1117 West 36th Street, Baltimore, MD 21211
(410) 889-5214 but I have not used them.

There used to be a place called Maryland Radio Center in Laurel, haven't been
there in a while and I don't see them in the phone book so I don't think they
are in business any more.

Can you please explain to me again how passing a cw test of 20wpm will, prevent someone from, in your words, "have a clue as to the actual workings of the thories they are being tested on". I know plently of people that can do cw (20wpm or better), yet cannot change a lightbulb. I agree, keep the cw requirement high, in fact, let's raise the standards to say 35 - 50 wpm. Then the question will be, do you still qualify for this exclusive fraternity you call "extra"? EXTRA what? I think technical knowledge is much more important than code speed, hands down.

>(To reply via email, remove all between rudder and @, or mycallsign@arrl.net)

Seen this when low voltage is applied to the 735 ie: around 11 volts.
Have him look at the other suggestions, Grounding, VSWR also make
install a current choke in the coax feed line between the radio and
tuner. Also have him measure the voltage right at the very back of the
radio. If it is below 11.75 volts then he will have to install a
heavier DC cable to the rig. or run a charger/generator to keep his
power source above 11.75 volts. what is he running for an antenna
tuner ? How about the ground plane in the vessel is it 100 square
feet ?

Professionally redesigned Heath SB-220 specific for 6 meters. Unit has been void of HF componets and replaced with 6 meter specific componets. Variable tuned input for totally flat input SWR. Tank circuit specific for 6 meters and > 50% eff. 100 watts in gets 1000+ watts out. This is NOT a compromise HF/6 meter modification, it is 6 meter all out specific. Looks good and works great.
$800.00 If interested please e-mail.....Thanks 73 Louie

Wrong!!!!! You need to do a little more research on what you are talking about before you leap into an argument.
After April 17, 2000, there will not be any more Advance licenses issued. You could very still earn the Advance Ticket before that date. Guess what, you still have to pass the 13 wpm before you can earn the ticket before April 17, 2000. So anyone that has earned the Advance Ticket before then has definitely passed the 13 wpm.

There are older 6m-only radios. The Drake TR-6 was a good tube rig.
The Kenwood TS-600 was a good rig also. The cheapest rig was the Swan,
but it had a drifty receiver. A good early 90's rig was the Icom 575,
which had 10m and 6m and a great receiver. (There were two models ...
one with 100W and one with only 10W.)

There are several excellent new HF/6m rigs. The Icom 706 series are all
great for mobile 6m work. The Icom 746 and 756 are excellent base
stations. You can get a new 746 for less than $1500, and the 756 is
being closed out. You definately want 100 watts.

My article is getting a bit old but still useful:

The same frequencies will be used, just different "channels" in each market.

By that I mean that if you have a Channel 6, it will be issued a license for say Ch 25 to broadcast in HDTV. They will broadcast on both channels for a while (either 7 or 10 years I think) one for analog one for HDTV, after which they will have to give up one of the channels.

The interesting question for some is what channel they will give back. For whatever reason, it seems to be "better" (i.e., more prestegious) to have a lower channel number. Theoretically I guess, the lower the number the lower the frequency and therefore the greater the range, so everyone wants the lowest possible number.

Anyway, if your local market has 6 TV stations, it will temporarily have 12. The interesting thing is the way the FCC worked it all out to have as little interference as possible from neighboring cities on the same channels. Apparently, when the channels were announced it created a great controversy among most stations that felt they were give the short end of the stick--or range so to speak.

I work for a cable company and read several article in trade magazines about two years ago, but never really got interested in it since it really didn't affect me. However, it led to an interesting situation with hospitals.

Apparently some of the wireless monitors used in hospitals use TV frequencies. The manufacturer got permission to build very low power output transmitters (something like 10-25 milliwatts). When the hospital orders the thing, the company checks to see what TV stations are within X miles and ships equipment on different frequencies.

Apparently, when one TV station in Dallas turned their HDTV transmitter on, it cause every receiver in one hospital's cardiac unit to go haywire and for a scary moment the staff thought about 15 people flatlined all at once. Needless to say, the TV station shut down temporarily, and many hospitals when through a quick check of the frequency allocations for their local TV stations. I had a guy from a local hospital's engineering department call me to see if I knew what was going to happen in our area. I put him in touch with the FCC with a shake of the head and a "huh" expression on my face. About a week later, I read about the incident in some trade paper. I thought about trying to find the guy and tell him I no longer thought he was nutty.

Hi everybody!

Im looking for a used FT726.
I have some questions concerning the radio, perhaps someone can help me.

When were these radios built?
How many antenna connectors are available?
What is the output?
What are the differences toward the "R" version?
What should I look for when inspecting the radio?
Are the 10/15m bands installed on all radios, or was this an option?
What do you think about this radio?

Perhaps someone has got an URL, where i can further inform me about
the Yaesu FT726.

Thanks for your help...

Vy 73ï¿½s

I did. See below.

> After April 17, 2000, there will not be any more Advance licenses issued.

Exactly.

> You could very still earn the Advance Ticket before that date.

Correct again.

> Guess what,
> you still have to pass the 13 wpm before you can earn the ticket before
> April 17, 2000.

You have to pass 13 wpm OR pass 5 wpm and get a medical waiver. Remember
medical waivers? They won't go out of existence until April 17.

> So anyone that has earned the Advance Ticket before then
> has definitely passed the 13 wpm.

NO. They could have gotten a medical waiver. What percentage of 13/20 wpm
hams get waivers? I don't know - such stats are not usually publicized. The
licenses don't tell you either. I've seen estimates of as high as 20%, though
I find that rather hard to believe.

The mere possession of an Advanced does NOT mean the holder passed 13 wpm.
QED.

I have this marine equipment available (I too would love to have a Mackay LF rig - they were gorgeous rigs):

Circa 1981 Scientific Radio SSB Marine Radio-Telephone, 1-KW Linear Amplifier, and Antenna Coupler for sale. All service manuals are available.

This is a continuous coverage (1.5-30 mHz) 10 channel crystal controlled system that was built for severe duty at sea. The tranceiver delivers 150 watts PEP (100w continous) to a 50 ohm load. It is capable of AME, CW, and FSK. Power finals are 3 6146A's.

The Linear is a servo-controlled unit running twin 3-500Z triodes and is capable of 1-KW keydown *output* into a 50 ohm load all day long.

The antenna coupler is also servo-tuned and will handle everything from a bent coat hanger to a long-wire at full power.

Tranceiver: SR-210MD - 8 x 16.5 x 17.5 inches, 50 lbs, 115/230 vac
Linear Amp: SR-110B - 20 x 22.5 x 50 inches, 260 lbs, 115/230 vac
Ant. Coupler: SR-650 - 24 x 20 x 10 inches, 73 lbs, 115/230 vac

This is a rather heavy-duty project package. Converting to amateur frequencies is a trivial thing. Cabling diagrams are included in the books. This system was working fine when it was decommisioned from a local tug boat fleet.

It's big, it's heavy - if you're not in the Pacific Northwest it is probably not worth the freight to get it to you.

Make an offer!

Unfortunately, the only place in that area closed, the Maryland Radio Center. Outstanding gentleman ran it. Didn't really run it as a mail order business but someone wrote in to QST once and gave him a outstanding write up.

The next place is in Baltimore, the original owner died sometime in the past several years but I believe it is still open. I used to be called the Amateur Radio Center but most people just called it Ernies. It located off of the Jones Falls Expressway. It was joked that Ernie had a couple of Drake TR-22 new in the box still, but when the new owners took over that was proven untrue but they did find a brand new, still in the box, Kenwood TS-520. To my understanding, Kenwood was not happy.

I don't know what lines they carry, but they were the only store in the country that had replacement Astic(?) D-104 mic elements in stock.

I hadf the same problem a month ago and asked a question on the same newsgroup. The main problem with FT-100 is or has been high failure rate. IC-706MK2G seems to have better ergonomics, including all connectors where they should be and a better speaker. Also, extra filters need not be soldered. FT-100 is very convenient as a mobile but not stationary radio. It has better CW, BK and noise blanker. Also it has DSP on CW and DTMF microphone. It costs about $240 less but does not include the AM filter. One strng point for FT-100 is the ATAS antenna.

I bought FT-100. The receiver on HF is quite strong in comparison with TS-850.

Have him check the VSWR. Usually if it is high the radio might lock
into transmit mode, Also make sure the unit and all other items like
power supply are are well grounded.

My kenwood would do the same thing if the SWR was over a 1.5:1.

MIKE (707) (no4n4x4@hotmail.com) wrote:
: Any input on a good six-meter radio? Or do they even make one? Or do I need
: to buy an HF rig that has six-meters included. Also, what would be the
: 'average' power needed for making DX contacts on 6?

Mike:

Six is a great band, but best results come from patience and opportunism. It's a lot like fly fishing; the ability to "read the band," understand and use the propagation mode du jur, and simply "be there" when things are happening are bigger keys to success than the rig you choose. Frankly, I think that's the the essence of what makes six such a challenging and fun band.

Bare bones suggestions: 100 w and a good directive antenna (~ 5 elements) > 35 feet in the air and in the clear. More is better but, beyond these basics, it gets tougher and tougher to realize a meaningful return on your dollar. CW capability will help complete some DX QSOs that would otherwise be lost.

Having said that, I still think persistence is the ticket. The band will be dead much of the time. When it's wide open, you (and everyone else) will know it. The tricky times are those when the band SEEMS dead, but is open between you and some desirable DX location. (I once had a great QSO with a ZL who popped out of nowhere in an otherwise "dead" band. Think I was excited about THAT?) Listen carefully, but make noise frequently. Just because you're not hearing anything doesn't mean the band isn't open.

It's also useful to get a current list of DX beacons on six. They're VERY helpful in diagnosing real-time conditions. It's also smart to monitor six meter DX websites and 28.885 mHz to keep abreast of who's hearing what.

I managed to work all of the "lower 48" and 15 (or so) countries with a TR-6 (200 w) and a fixed indoor dipole. I had to put up a yagi to do better than that (and it DID make a big difference), but this will give you some idea of what can be done if you work at it.

Have fun on six! It's a GREAT band!

73,

Mark -- WA9ETW

3039. Ht Stand ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-26 00:00:00 UTC
From: gdn1@rocketmail.com
Message-ID: <388f2116.1298080@news.usol.com>

I used to have a wooden stand for my 2 meter HT back a few years ago, it has since come up missing. It was a just a simple square piece of wood with a angled slot in it and a piece of plexiglass that fit in the slot. The belt clip on the HT fit over the plexiglass and held it in place so you could use it like a min-mobile rig. Anyone know of anyplace that still sells such a contraption ?

Regards

Gary

Have a Kenwood TM-733 dual band , 2 and 440
Comes with the 13 ft remote kit including mic kit
Radio is a 9 out of 10 condition. I do not have orig box.
Have 2 manuals.
Will double pack it.

$300 including shipping in the USA

Reason for selling : 2 cars got stolen at work and all they wanted was the
radios. So it's back to a HT
If you have a VX5R your willing to trade off , lets talk.

Have a very good Electro-Voice 638 mic head (no stand) that is surplus
to my needs. It is dynamic, Hi-Z, with excellent 10-10,000 cps freq.
response. The 638 is similar to the E-V 641 in design, and is (I
believe) the same (or very similar) mic head as used on 1970's Heathkit
desk mics. Will sell for $45 + $5 to ship. Tks es 73, Jan N0JR

Since I do have a radio which goes there and listen on 10 meters half
the time, I have to say that I have heard maybe 3 or 4 CB'ers in that
low segment in the past 3 yrs. However, I have heard more bootleggers
on VHF/UHF than on the HF bands. There isnt anybody allowing CB'ers to
use The ham portions of HF legally. They usually dont last too long
when they are there and we must remember that other countries sell
radios as CB that cover these bands and may well be another country
you are hearing. While I do admit that there are CB'ers that go there,
I also find that in that segment there SWR is really high and that
deters them from coming back. Another reason I think that FCC doesnt
do too much about CB radio is the fact that DX kind of helps the cb
get away with alot since I know I dont want to travel 3,000 miles to
catch an operator in the act, plus the other countries that operate
legaly in those bands as CB operators kind of help to camouflage the
signals. That is funny about the roger beeps and weird talk.....

When I asked the question below, I just thought that there was some
news that I didnt hear.

3044. Tech question Drake R4B 1st IF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-26 00:00:00 UTC
From: "Brian M. Miller" <miller@spk.hp.com>
Message-ID: <388F2718.98CFDACE@spk.hp.com>
Source record: 87437

I have a Drake R4B receiver and have owned it for many years. The receiver has a passband tuning filter and I recently observed that signals were louder when tuned on the upper sideband vs when tuned on the lower sideband. Initially I suspected the passband tuning filter so I removed the assembly from the radio and tested it thoroughly. The filter is fine. When tuning from USB to LSB, the gain is constant.

Subsequent investigation led me to the crystal filter in the 1st IF. The receiver uses a first IF of 5.645MHz, and a 2nd IF of 50KHz. When I tuned across the crystal filter I discovered that the signal was relatively constant for 4 or 5 KHz below 5.645MHz, but started to roll off almost immediately above 5.645MHz. The 1st LO is greater than the RF input signal so the 1st IF spectrum is inverted. I.e. lower sideband signals now appear above the 1st IF frequency and upper sideband signals are below the 1st IF. I believe the 1st IF crystal filter is responsible for the attenuation I observe on the LSB signals so I removed the crystal filter expecting it to be defective.

The crystal filter is fairly simple and is comprised of only 2 crystals. One at 5.642MHz and one at 5.645MHz (the crystals are labeled). I havenï¿½t yet had a chance to bench test the filter yet, but I am surprised by this choice of xtal frequencies. I expected the xtal frequencies to bracket the IF but this is not so. One of the xtals is exactly at the 1st IF (5.645MHz), the other is 3KHz below. Hence I would expect the crystal filter to be biased toward frequencies below the 1st IF. But this doesnï¿½t make sense. Why is the filter biased this way? Maybe my receiver is not defective. Maybe all R4Bï¿½s have less gain operating on LSB vs USB, but I find this hard to believe.

Can anyone shed any light on my mystery?

Thanks

Brian NI7P

3045. Re: Death Spiral of Amateur Radio accelerates

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-26 00:00:00 UTC
From: Jack Taylor <n7oo@theriver.com>
Message-ID: <jRFj4.51280$Lf2.1346306@news6.giganews.com>

HDTV transmissions have already started and according to reports of viewers it's quite impresive. However my point (prompted by numerous battles by industry to take part/all of the VHF/UHF ham bands) is that allocation of the TV channels is a huge waste of frequencies. If TV were reallocated to Ku band satellite it would free up this terrestrial resource and take the pressure off us amateurs.

Last year the DISH network backhauled the major city network stations off satellite using the MPEG2 digital technology. From a viewer perspective this was pretty neat. One could select the time zone they wanted so's to view major network feeds. Also, one could watch local news for a particular area. The DISH network has since moved these feeds off satellite to fiber.

This experience has raised the question in my mind, "Why don't the major networks broadcast unencrypted via Ku band satellite to the general viewing audiance?" "Why continue supporting numerous affilate terrestrial stations?" With small dish MPEG2 techonology they could economically cover the US with 3-4 time zone feeds which would deliver crystal clear advertiser supported reception to each household in the US. Indeed, this is what the "dish on a stick" firms are doing now, except they charge a monthly fee for delivering this service.

MPEG2 receivers and Ku band dishes are very cheap and if Free to Air (FTA) major network services were available, there would be little or no need to tie up a hundred MHz or so of terrestrial frequency resources.

RATELCO Battery charger / Rectifier. Type FC481505A
Model # 102B-3608-00. 48 Volt @ 150 Amps, Float or Equalize.
These units were manufactured SEPT 1991 and are in the Factory
crates and have Never been used, have 2, sequential Serial numbers.

These units can be used as 48 volt charger for Telephone Central
Office Battery supply's with the ability to Float or Equalize.
They can also be used as a stand alone, well filtered, power
supply rated at 48 volts at 150 amps CONTINOUS DUTY.
Input = 110, 208, 240 Volts. 60 Hz, single phase

A must for the expirimenter working with the new generation
of 48 volt solid state RF devices Rated in excess of a Kilowatt.

Email for pictures in JPG format.

Weight is approximately 550 pounds, Crated for freight shipping.

$1200.xx Each. OBO Prepaid, in my garage.

Loading and shiping are buyers responsibility.

Bob rhawk@megabits.net.

From: OZ5ABO <2b@email.dk>
Message-ID: <86q2ff$i45$1@news.cybercity.dk>
Source record: 87246

Hi

I have had the Ft100 but ended op with the 706 MKIIG. Several of the reasons have already been touched here... eg. speaker, pigtails, filters and the failure rate. My first two Ft100 had several errors. So I decided to skip the FT100.

In general I dont think there is any major difference on the two rigs - when they works...! It all comes down to wether you like pigtails, DSP, Wideband receive, connections and filters, new or old designs etc etc.

But pay attention to the fact, that buying new technology (=FT100) can cause problems. And the fact is, that there is/have been problems with the FT100. Another fact (from my point of view) is that Yaesu have a gained a problem concerning short time to market versus quality and ability to react quickly to problems in the market.

I have several Yaesu's (FT1000MP, FT50, FT8100 etc) and then the 706G and I hate to see what is happening to or at Yaesu!

I've been working on radio equipment for 18 yrs and haven't seen one
that would carry that amount of current. However, If you do find one
that will, I would like to know about it.

Even Dodge doesn't know of such a part. You'd figure if they have an outlet
that will deliver that amount of current, they'd know of someone who had a
plug that would handle it.

> of the thories they are being tested on".

The point is that you cannot just cram for the 20 wpm exam in a couple nights and pass it... you have to actually acquire the skill to receive cw to pass that exam.

You need no skill or real knowledge to pass any of the written 'tests', since the questions and answers are already public knowledge for months in advance.

What would you think of the calibre of a college education where all the exams at the school were done as the written tests for ham licenses are?

> I know plently of people that can
> do cw (20wpm or better), yet cannot change a lightbulb.

Irrelevant.

> I agree, keep the
> cw requirement high, in fact, let's raise the standards to say 35 - 50
> wpm.

Again at this point you would be proposing a change. As such you would have to demonstrate the reason for such

> Then the question will be, do you still qualify for this exclusive
> fraternity you call "extra"? EXTRA what? I think technical knowledge
is
> much more important than code speed, hands down.
> Jon KG4DIR

Where do you figure it is exclusionary? And do you not notice there is also an additional TECHNICAL knowledge requirement allegedly for Extra as well?

The Hot Water 101 is an excellent rig to almost give away to an inspiring ham.
Unless the recipient is a collector, I would try to keep the selling price
low to encourage a new ham. $200? Good luck selling Joseph, and I hope that
your rig sparks some interest with a new ham.

: Anyone know anything about this radio ? Motorola MCS2000
:

It is the handheld version of the series of 800 Mhz trunked radios.
The unit is about $1650 each for Model II (alphanumeric display
and keypad). Model I is cheaper (about $900) with less features.
Very flexable radio for trunking.

The MCP2000 is the mobile unit.

Got one to sell?

BTW, this is becoming the standard radio for police and public
safety.

Here's the way to pull those weak ones out! DSP audio filters certainly have their uses, but we all know that the place for a filter is in the IF of your rig. This 250 Hz CW filter will work in thec 950 SDX, 940S, 930S, 850S, 690S and 450S (check your manual before bidding).

The filter serial number is 1D01 and comes complete with the original installation instructions.

What's an MCP2000? European version?

I have two MCS2000 Model I Smartzone 900Mhz and they are VERY similar to the
MTS2000 portable that I have. The MCS2000 is a MOBILE.
My company has five of them and we were one of the first places to get them.
Serials are less than 200. They were major buggy and had to be 'upgraded'
several times by Motorola before getting them fixed. They are VERY good
now.
Nice radio all around, but I like the Spectra series better. Too bad
Motorola orphaned that line.

Gary,
I agree with your point. When all of the Mom & Pop local hardware stores were driven out of town by Home Depot, I really missed the local hardware store. My children will never experience going through those wonderful bins, and telling the person at the register "I've got $3.40 worth of stuff." And the register person may be the mayor of your town.

Same thing with Radio Shack. I go to my local store quite often, and do *not* take it for granted
because there is no place else locally where you can pick up electronic components.
Nuff said? For all of you RS complainers, is it better to have no store?

Right. Actually the answer to your original question is the FCC.

I have it! We make a requirement that you have to
answer written questions at the rate of 20
questions per minute for Extra.

You gotta be kidding, Gary. From Webster's: "rote - routine or repetition carried out mechanically or unthinkingly." That describes 20wpm Morse *perfectly*. In fact, some Morse gurus have said, "Repeat it over and over until it becomes mechanical." If there ever was a good description of 20wpm Morse, it's "rote".

If we're now classifying extras according to which exam they took then the "real extras" are the ones who took their extra before an FCC examiner - and traveled at least 15 miles and took it a 9 AM on a weekday and had to copy from a speaker in a noisy room and the code had to be generated by a worn out paper tape machine.

No, YOU have to be kidding, Cecil. You are comparing apples and oranges when you say that memorization of Morse characters to build speed is analagous to memorization of exam questions. If you have successfully "memorized" Morse at 20 wpm you have learned a language. You can recall this information again and again and in doing so develop a skill (yes - an out-dated, out-moded antiquated, etc. etc. skill). What does one "learn" by memorizing exam questions? Anotherwords - who can retain a larger percentage of the acquired information at a later time? That is the difference between memorization and learning.

Help

I have an ICOM 3200A that has a flaky display. I looking
for Schematics and/or new display. I called ICOM and they
NO LONGER STOCK the display, or the driver, schematics ha
ha. Is there a suitable replacement? The rig has been in
a box for lord only knows how long in a guys garage. I
bought it as a package deal. The RADIO portion works well,
45+ on my wattmeter, and everything else works except the
display. I hate to totally junk it.

pat

When your ilk stops whining for what it has not earned and the licensing requirements are put back to where they were before the cheaters whined for the questions and answers to be released for public knowledge, before the whiners got no-code and the much-abused (as I SAID it would be) disability waiver, and this ridiculous 'restructuring' (read:Death Knell) of 2000, and leave it that way then I will stop legitimately taking issue with the incremental destruction of a hobby I have worked hard to keep valuable.

I believe he resented the whiners, not the test takers.

However while I do not resent the test takers, I *WILL* continue to
consider them to be inferior, as I should.

If they reduced the requirements for doctors' licenses, or to pass the
bar exam, would you choose to go to a doctor or lawyer who became such
BEFORE the reduction in qualifications or one after?

I feel unless you are an idiot you would go with someone pre-change
rightly considering anyone post-change to (unless proven otherwise on a
case by case basis) be inferior to pre-change.

All programmers SHOULD at least learn a basic knowledge of assembly so
they know what their programs are doing.

> Some programmers enjoy it, most do not. Learning it provides
> nothing to the craft and can cause bad habits.

Yeah, right... NOT.

> I don't want to see CW requirement
> go away, but I can't give you a good reason for it.

You have yet to give a good reason for eliminating it.

> Yes, a lot of things worth doing are hard, but no one has been able to
> make the case that CW is worth doing TODAY unless you enjoy it.

Oh, I see.. the Narcissistic/Hedonist model... no one should have to do anything they do not personally enjoy. And do you adhere to this model in all things, or just when you wish to destroy Amateur Radio?

Has nothing to do with monetary purchase price.

> Get over it. Times will always change and if you try to hold on to
> the past you will end up being a bitter person.

Yeah, so if they re-introduced the enslavement of the black race they should just 'stop their whining' and 'get over it'. Huh?

Only a completely idiotic moronic fool considers ANY change to be inherently 'good'.

Only change for a GOOD reason is good.

Irrelevant. If you worked hard to get a house on a particular street,
and then ten years later the government just handed out houses to anyone
who wanted one, free of charge, would you resent it?

You should.

Especially if the quality of the people moving into the area now is
substantially lower than what were there before.

Sorry, Cecil, but an Extra Class License (pre-April 15, 2000 that is...
any after that are nothing but used toilet paper) IS reaching the top.
It is meeting the most stringent requirements. That does not mean that
this does not open other doors for you, it does. But it IS reaching a
level that after April 15, 2000 no one else will ever do.

All others who follow WILL be inferior, no matter what.

Beg to differ. It survived and prospered quite well with the likes of me. It is only since catering to the whining likes of *YOU* that it has been in a death spiral.

> Sorry about the restructuring but I had nothing to do with it.

To a point, true. The restructuring is a symptom. Catering to the whining masses is the disease.

as they
> did.

Well, lessee... we have had catering to the whiners for nearly a decade now... ever since releasing the questions and answers... then to no-code... then the much abused disability waivers... and now this. Guess what? As you said this BS which is destroying any value of Amateur Radio and reducing it further towards the cesspool that is CB has not done what you claim you want it to have done.

So why are you still so insistent on destroying Amateur Radio?

You seem to think if a little of your crap does nothing, and a lot of it does even less, that even more of your BS will somehow do something useful.

Such is a completely moronic attitude.

> We need to get some younger blood to keep it going at all.

I have always held that we need QUALITY, not quantity... a mountain of crap is still crap, but a fist sized diamond is priceless.

> the minimum requirements have changed, doesn't mean that is all you
> are allowed to accomplish. I don't have to lower MY standards. I will
> still be
> striving for 20wpm in code because that is the goal I have set for
> myself,

Glad to hear it... but still if you make Extra post April 15, 2000 you will, as you should, be considered inferior to anyone who passed Extra pre- April 15, 2000 unless you somehow prove yourself to have actually met those same stringent requirements.

> but I will use every advantage available to upgrade my "ticket" at the
> earliest possible moment.

So you will take the easy route rather than actually earning it. Yeah, such to be proud of... NOT!

> Your having to walk 5 miles to school in the snow bare-foot and uphill both

We, who care about Amateur Radio, care. If *you* do not care, why don't
you find another hobby? Maybe CB? You seem quite suited for that

particular cesspool.

Not surprising this whining I am responding to comes from a 2x3.

Would he value his less? In that context no. Would he consider it,
legitimately, to be an inferior accomplishment? Certainly. Would the
one given the bike likely value it less than the one who worked hard for
it? Almost guaranteed.

3103. Kenwood R-5000 Computer Control, No Frequency Change!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-27 00:00:00 UTC
From: bjpgr@my-deja.com
Message-ID: <86ocjuddd1@nnrp1.deja.com>
Source record: 87303

I have the Kenwood R-5000 receiver with the computer
interface unit installed (IC - 10 chip set and IF - 232C interface).
My problem is that it will not change frequency, but it will change
mode (AM, FM, USB, LSB etc.).
I know there was a service bulletin regarding this saying that you may
have to replace IC -52 with a replacement IC
on the control unit if your serial number is below a certain number
which my unit is, but I called Kenwood and checked
on the IC -52 that is in my unit, it is MBM27C128-25 with a label on it
that has JAI3. This is suppose to be the correct one.
I using Scan Manager Pro software, which I called them on this and they
said it must be the chip.
Could the chip be bad? I have a replacement chip, but did not install
it as it has the same number on it.
Does anyone have any ideas what could be wrong or had the same problem.
Please e-mail me at: art2000@fea.net if you have any suggestions.
Thanks to you all, Doug.

Your not quite correct in your thinking. The Ford Power Stroke engine is not Electronically injected, it is standard direct diesel injection, using hydraulic pressure to operate the injectors.
I suspect that the source of the noise is the PCM Power Control Module, or computer engine controls.

How would I have not earned it? It in fact is not being handed to me,
I still have to work for it, unlike some who collect welfare and have
kids that dont work for the rest of there life at the starting age of
22 yrs old. I would have earned it only slightly different. Are you
disgruntled that I still prefer to have the code? Whether or not, I
would still have gone for 13wpm to upgrade to general, But why?
Do you take a trip and go the long way when in fact there is an
interstate that will shorten the distance and time?

>In case you missed it, the FCC was around in the 70's when its BS
>similar to what it is doing to Amateur Radio now resulted in the
>cesspool that is the 11 meter band.

If I recall correctly, The FCC was not as technologically advanced as they are today either. The FCC dropped the licensing on CB and created that havoc, Did they drop all licensing on the amateur bands? Did I miss something? I could have sworn that I still have to take an exam and pass it to work ham bands.

>Also the FCC was the body which denied that anyone would abuse the
>'disability waiver'... yeah, right... NOT!

So far by your post, I get the assumption that you defy law enforcement. You continually bash the FCC, but yet it is the one force that has allowed you your right to use the amateur bands. Name any Federal afiliation that is doing anything for some one and not against. The FCC isn't doing anything against you. the only reason your upset is the fact that someone can now get what you have much easier and your license will only mean what it states in your ticket just like the next person with the same ticket.

Dissability Waivers? I suppose you want all the WheelChair ramps removed from all the local business' now too? Do you get mad because the first couple spaces close to the doors at a local business are for handicapped? I suppose your one of those Ingrates that park in them so you can laugh and watch them have difficulties for your own amusement. I do agree that Dissability Waivers can be abused, However a stricter means should have been in force for these, but I dont get mad about it, I just continue having fun the way I usually do.

11 yrs? Good for you... What was it before? You upgrade to Extra at 20 wpm and then what? Like the post up above says, "ALOT" not "ALL" will dissappear. The benefit is to expand your knowledge and have fun doing it like it has allways been.

The AN/PRC-126 is a small chest or belt pack man portable tactical band radio set, made by Magnavox Government and Industrial Electronics Corporation. This is a current issue set. It covers 30 to 88 MHz in 25 kHz steps (FM mode ONLY, carrier squelch with 170Hz tone on tx to activate squelch on other military radio sets.) Fully synthesized and programmable from it's front panel, you can program 10 simplex channels of your choice into the memory, and select them via a rotary channel selector switch on top. Illuminated LCD display of frequency on front panel It is 9.97" tall (with battery box, less antenna,) 3.78" wide, and 1.52" thick, and weighs 2.6 lbs. including battery and rubber antenna. 70 hours operating time with lithium battery, and 14 hours with a Ni-CAD. Has tiny internal speaker and microphone (PTT on case,) with standard military connector on top for any military audio devices such as handset, microphone, headset or speaker. 2 watt max RF power output, but vehicular PA available to 15 watts. Radio has antenna tuner built in, with rotary switch for different segments of it's range to
match the two portable antennas, and a selection for a 50 ohm external antenna.
Radio will BEEP at you if you do not have antenna switch in proper position for
match with selected frequency.

My unit is in way above average condition for it's type typically seen. Small ding or two on battery box are the ONLY marks on it. The little data plate on rear is missing. This one will come with TWO BA-55/88/U Lithium battery packs, issue olive nylon chest / belt pouch with pockets for spare battery and second antenna, the 7" flexible rubber helical "short" antenna, two piece "long" antenna (AS-3575) consisting of flexible gooseneck base and folding metal tape or "blade of grass" whip, an H-250/U handset, AND a M-80C/U hand microphone. An original Department of the Army Operator's Manual will accompany the set as well. Fair Radio Company in Ohio now has rechargeable Ni-CAD packs for this radio at around $35 each.

I have seen these sets advertised for $600+ at some dealers, with NO accessories of any
type. Pick up this complete set, ready to go, for $475 shipped in the U.S.. I can e-mail a poor,
military picture of the radio and accessories if needed.
No sales overseas.

Thanks for reading!

You won't find them much cheaper and the AES return/service policies
are the best in the industry! I bought mine there and love it! It
has a few quirks like not being able to select a PL tone and then
choose ctcss/tone only or carrier and have it keep that tone
assignment. Their implimentation requires you to select the tone for
tone only and if you go to pl decode you have to select the tone all
over. A few other little quirks but otherwise it is the best radio I
have ever owned!

So according to you all future amateurs will be inferior to those that took
and passed a 20 wpm code test. Well do me a favor, remember my callsign,
K1MKF, and someday when I activate a rare DX location or operate from the
last section you need for a clean sweep or even answer your distress call
PLEASE don't bother to establish two-way communications with this inferior
operator. I wouldn't want you to lower your standards.

Why do you continue to attempt to value yourself greater than your peers based on what? 1) The fact you passed a test under the old rules. 2) How much lomger you will be missed. What's next? My daddy can beat up your daddy or my bike bike is newer than yours? Get over it. Either adapt to the changes and accept them, keep bitching until everyone tunes you out or just walk away.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Well, occasionally (monthly?) there is a message titled "Guide to the rec.radio newsgroups" (or something like that). This does specifically spell out what each group is for. I can't find the last one because my news server only retains the past two weeks (and ends on January 11th) of history, but next week, the message should reappear.

>feet ?

The tuner is an Icom automtic coupler designed for use with the 735 (and
probably other Icom models). I don't know the model number. The ground
plane is OK. I should have added that this installation has worked properly
for many years. The problem is new and has just shown up.

He has both solar panels and wind generator. Low battery voltage has not
been a problem for him. However, that doesn't mean that he couldn't have a
bad power connection to the radio, or a corroded ground connection somewhere.
I'll pass on your suggestions.

Thanks and 73, Malcolm, WX4YZ

I have a Heathkit HW-101 HF radio for sale.
I don't know what it's worth, but I know it works, I used it to make several contacts when I tested it at the club station. It's in fair condition and has surprising audio. Comes with external matching power supply and lollipop microphone. I have pictures of it and meant to put it up on ebay but decided to try my luck here first. I also have an SWR meter that goes with it. Looks like it was an add-on for the radio, as it's almost the same color.

best offer, as I have no idea what it's worth.
THanks,
Joe

From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <38907859.D2BDD77C@cybertime.net>
Source record: 87344

That photo was originally posted to me and others by Dale, KB7UB, who works at that HRO! I believe he or a co-worker took the photo. And YES, there is NOTHING left to dispose of. Everything is burnt or carbonized beyond recognition. A new store down the block is on the way in about two to three weeks. Looking forward to the "Grand Opening"..

> like.

So IOW if you bothered to hunker down and WORK for something you wanted
you could do it, but you would rather NOT work for it, just WHINE for
it, and then jump for joy when you get something handed to you that you
most assuredly did not EARN (as if you had any inkling of the concept).

In case you missed it, the FCC was around in the 70's when its BS
similar to what it is doing to Amateur Radio now resulted in the
cesspool that is the 11 meter band.

Also the FCC was the body which denied that anyone would abuse the
'disability waiver'... yeah, right... NOT!

What makes you think anything has changed?

> I would also like to add, That I notice alot of new hams that do not

I was technician for 11 yrs... I never dropped out of the hobby.

So the idea is to make it simplicity itself to get the highest class of
license... then what? How are they to upgrade from there? And if they
do not upgrade, as your claim goes, they will leave soon? So what is
the benefit?

ANSWER
> POOL.

That was the first major cheapening of the entire process.

Since they have eliminated the code for all intents and purposes I feel
they should do away with the multiple guess questions and replace it
with a 100 question comprehensive ESSAY STYLE exam to make sure these
people KNOW what they are talking about backards, forwards and sideways.

Since they are leaving only the written exam make the exam meaningful.

And also do away with releasing the questions in advance. If they know
their stuff they do not need the questions in advance, and if they need
the questions in advance they clearly do not know their stuff and should
not pass. Cheating is cheating is cheating, no matter whether those in
authority choose to try and redefine it or not.

> We studied, we worked, we supported each other, we sometimes failed
> and often passed. But we did it right. You didn't.

Absolutely.

I will continue to consider only those who gained their upgrades to
General or above (certainly Extra) pre-April 15, 2000 as real hams...
anyone else will merely be a pale wannabe.

> Is it any wonder that many of us resent you?

None at all.

> Have all the fun you want. Your side won - the hobby is cheapened.

Yup... sort of the scorched earth policy. They won access to something
far less worth winning access to.

>
> LONG LIVE SPECTRA/ASTRO SPECTRA !!!

While I won't say they are the best radio to come along, the
MCS2000 is not a bad radio. It still does have a bug in the way it
handles a remote head. The "Big M" supposedly is working on the
firmware fix for this. Also, OTAR is not the highest on the list of
priorities unless you work for the government and even they don't
generally use it.
I firmly believe the Spectra and Astro Spectra may well be the
best units they have brought out in years. They are still available
to government and other law enforcement through Motorola direct.

FS: AOR 7030 + (plus) SW Receiver.

Receiver is in excellent operational and cosmetic condx. Includes original box, manual, remote control, power adapter (wall wart).

I will be moving in early spring and need to make room.

$840 shipped/insured UPS -- CONUS.

Thanks -- Ben
WB8HUR San Diego

Have installed one 3.5 Khz Collins mech filter, that compliments the standard/stock filters in the rig.The set is in nice condition & works fine. Will throw in the Ergo operating SW, a 99 buck option with the set as well. Comes with box, maunal(s) etc. Orig investment here is in excess of $1600. for the package; $850 plus UPS or US Priority Mail shipping to your door. Further questions ?, shoot me a note for add'l details. I am movin this out the
door, as I have tooo many rigs in the shack and one has to go. (since I went ahead and ordered a 756 Pro the other week)
Anyway; references available.Nick in CT. KE2WG

>which I have been told is ozone.

Whoever told you is not a very reliable source. Producing ozone takes
thousands of volts - enough to ionize air. Electric furnaces operating
on 240 V (or less) simply cannot produce ozone from the heating elements,
no matter how they are made.

Now, there are electrstatic air cleaners that do use high voltages,
and they can produce ozone - when used on any type of furnace, electric,
gas, or anything else. If you have an electrostatic air cleaner, try
turning off the power to it alone, and see if the ozone smell goes
away.

> It is meeting the most stringent requirements. That does not mean that
> this does not open other doors for you, it does. But it IS reaching a
> level that after April 15, 2000 no one else will ever do.

Say, how did you qualify for the Extra Class lic? I am just curious after the insights you offered into your math capabilities.

You had the option to get 4A and 4B behind you in one single session. But you also had the option of passing those elements individually.

The post-4/14-Extras will not have that option anymore. They have to demonstrate a theoretical knowledge in one single exam, which is equal to the sum of what you needed to demonstrate in two separate exam elements and if you wanted, even in two separate sessions, which could be months apart.

Now, how much is 1 + 1 ?

Wrong answer, Old Man.

It is _not_ 0.0 ... Try again.

Maybe, some day you will arrive at the correct answer. And possibly understand, why your ranting does not say anything about the post-4/14-Extras, but says a lot about you.

3159. Complete Micor VHF repeater forsale!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-28 00:00:00 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <3891D23D.CA94BDF3@lakefield.net>
Source record: 87151
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

The telewave duplexers new price for the TPRD-1556 is $1572.00 as
listed on internet site.
The Scom 7k with voice, phone, and prg lists new about $ 850.00 as
listed on internet site.
The Micor comes converted for 2m, with service manuals, and power
supply,
in cabinet, is worth. $1500.00

The total replacement cost would be $3922.00
depending on what you can get a converted Micor base, or repeater for.

I am asking $2250 plus shipping and insurance, shipped from Manitowoc,
WI 54220

Please, serious inquiries only.

Have a beautiful, vintage Vibroplex Deluxe Vibro Keyer (polished chrome base with red finger pieces). This unit was made at 833 Broadway in New York, is serial 221325, dates to 1962, and comes complete with its original box stamped with its serial number. Vibro Keyer is in Collins-scale EXCELLENT+ condition, still bright and shiny, with no nicks or gouges, and brass label (with serial # stamped in) intact and like new. Box is in very good shape, no rips, tears, or dents, and label still completely readable. This is a very early example of the Vibro Keyer, a collector's item, and fine enough to grace any collection. It also works perfectly--very smooth action--and could be put on the air immediately. Will sell for $95 + $5 to ship, price firm, sorry no trades. Tks es 73, Jan N0JR

Fred, I could do as you say, but as Ham radio turns to Shit over the next
12 months, those 30-50 year olds won't want an amateur license because
they be able to hear the same thing on CB for free!

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Des, I recommend the ARRL Radio Amateur's Handbook as an excellent reference on how these things work.

Further, there is a company (name escapes me at the moment) in the US that manufactures a single chip receiver that requires one crystal and little more to make it operate.

In these days of cellular telephone excitement there are many companies making circuits for transmission and reception at low power levels and with a minimum of ancillary components. Of course, using these components will not teach you all that much about how to design radio circuits, but it does offer a short path to a working model.

If you have any specific questions, let me know.

73, Bob K6DDX

Have a classic ETO Alpha VOMAX SBP-3 Split-Band Speech Processor, serial #116, that I don't need. The "Alpha VOMAX," as it is called, is commonly considered the best speech processor ever offered on the ham market. It splits the audio signal into four discreet bands, peak-limits each band, passes the four separate signals through bandpass filters to eliminate all distortion, then sums the signals in a phase-equalling combiner. The result is audio ouput you can feed to your transmitter that has less than 5% distortion and 10-12 db power gain. The Alpha VOMAX is so clean and easy to adjust that serious DXers have often used it ahead of the RF pseech processors internal to their rigs (such a setup helped me get 5BWAZ). This unit is in very good cosmetic condition and EXCELLENT operating condition. It comes complete with ALL documentation, including technical details and circuit board layout as well as installation and operating instructions. Sell for $95 + $5 to ship, price firm, sorry no trades. Tks es 73, Jan N0JR

If all who post here would use the energy they expend p---ing and moaning
about the death of amateur radio
and .would accept what they can not do anything about; then work to get the
hobby back on track. it just might not die.

I wonder why all this hoopla is taking place on a "computer" based newsgroup
instead of over the bands?

I'm sorry, but what does this moronic spam have to do with cb and relaxing
requirements for licensing? I know that there are a lot of folks who don't
like the idea of the way restructuring has gone, but give me a break.
That's kind of stretching a bit.

>exam they took

If you're going to do that, the only *real* hams are the ones who had
to demonstrate *sending* as well as receiving code at whatever speed
they were tested at. Being tested for receiving only is *obviously*
cheating.

I am not taking sides one way or another, but when I went to
Washington State University, learning a computer language fulfiled
a foreign language requirement.
In reality, learning the moris code is another way of expressing a
language. Italian and Spanish are very close. In fact, if a person can

real Italian, he can often understand written Spanish. Yet both are
distinct languages. I am not tryig to argue anything, but just making
a comment,

TRADE POLYPHASERS

I have the following New In Box Polyphasers

(2 each) IS-B50HN-C2
bulkhead mount
125-220 Mhz @ 500W
220-700 Mhz @ 250W
700-1000 Mhz @ 125W

(2 each) IS-B50LN-C2
bulkhead mount
125-220 Mhz @ 375W
220-700 Mhz @ 125W
700-1000 Mhz @ 50W

(1 each) IS-50NX-C1
Flange mount
50-220 Mhz @ 375W
220-700 Mhz @ 125W

All have Type-N female connectors, both ends.

WANT TO TRADE one-for-one for New In Box Polyphasers,
bulkhead mount, rated 1.5-50 Mhz @ 2KW. These include:
IS-50LN-C0
IS-B50HN-C0
IS-B50LNC0MA
IS-B50LN-C0-ME
IS-B50LU-C0 (preferred)
IS-B50HU-C0 (preferred)
IS-B50LUC0MA (preferred)

Thanks and 73

Ameritron AL-80 1KW amplifier. Covers 160 thru 15 meters. Can be modified to cover 10 meters too. Between 600-800 PEP watts output. Uses single 3-500Z tube. The tube is recently replaced, with approximately 20 hours on it. Condition is very good. Has a few minor scratches but no serious blemishes. Includes original instruction manual and double-box packing. Very similar to the Heathkit SB-1000, Drake L-75, amplifiers. Now that the bands are hot, you too can be a "DX Pileup Smasher". Reason for sale: I just upgraded to a fully solid state, fully automatic, half kilowatt amp, so this one is surpluss to my needs.

Cecil, let me offer the thought that "CW" is actually a superset of Morse. While Morse is a simple - although somewhat unique - alphanumeric symbol encoding system, CW communication involving Morse has over the years evolved into a pseudo language with the syntax, et al that you cite as lacking with Morse alone.

It is entirely possible - and it is done daily worldwide - to communicate effectively over a limited set of topics of mutual interest with amateur stations worldwide whose knowledge of spoken English is anywhere from limited to entirely lacking. This has been especially true with Russian/USSR stations over the years.

The commonality of abbreviations, subject matter, and even the "order" with which topics are discussed or presented all combine to provide a language-enabling mechanism that is actually rather effective, however limited in potential content.

Ok here is the situation I live in a apartment building that doesn't allow antennas.
This is what I have bought to construct one on the window for my vhf/uhf radio
a roll of heavy duty alarm tape(one they use for window alarms). the ends to attach wires to it. the window is 52 inches high 46 inches wide. this is the space
I have to use.

Now my problem don't know enough about ant. design to do it. Could someone please help.

Mitch

Of course, they are technical. This is supposed to be a technical service.
Who cares what mode they use to operate?

I'll type slowly.

You asked, "Who is allowing CB'ers on HF?"

I answered, "The FCC."

Please note, the words "giving it away" were never used.

Your comment about no code techs are irrelevent to HF and CB, since they
were not given voice priveleges.

Some would argue amateur radio has already turned into CB, some before
the No Code Tech licenses were issued.

The reason the socket is rated for 20A is because
people tend to use multi plug adaptors and use
several devices in the socket at the same time.

At least that was the reasoning I was given my the Dealer.

As to heavy duty plugs..
I have found the ones designed for ac/dc TV's to be about the heavest.
Can be found in larger Truck Stops and Semi Truck dealers and I suppose RV
dealers too.

The MCS2000 is also available in the remainder of the bands as
well as 800/900 mhz.
True to Motorola fashion, they build them first and then design
them in the field.

Of all the things 20 wpm MIGHT be, "rote" damn sure ain't ONE of them!
Copying, and WRITING DOWN CW at 20 wpm is a SKILL that must be
practiced - much like juggling or learning to play a fairly complex tune
on the piano - CW at 20 wpm is difficult for most because at that speed
you MUST be capable of deciphering characters and common words by their
SOUND, not ny counting dits and dahs - AND, due to the speed, you must
also be writing it down 2 full characters after it is sent - an act of
coordination and concentration FAR in excess of that at 5 or 13 wpm...
Copying 20-40 wpm in your head is not that difficult - it's doing it
while writing it down that's hard...

Cecil
Your wasting your breath. It is obvious that his mind is closed to
this subject. He is under the delusion that someone who has passed
the 20 wpm code test is superior to all those who have not. When did
the ability to do code at a fast speed justify such inflated ego's.
I am an Extra and was glad to see the end of the 20 wpm code as
a right of passage into the Extra Class ticket. The 20 wpm code test
has hindered many from becoming Extra's. Many who are Electrical
Engineer's and so on. Some of us found doing the code difficult.

Hi Joe!

Good way to check ou the hw-101's value is check em out on ebay and see what they are going for there. It's varies a bit depending on whether th power supply is included, speaker is included, and appearance and working condition of the setup.

I run one (thanks BB!) and enjoy it - I do have the hum problem on my xmit signal, but m using an old, cheap CB handmike. ie: I most liekly will have to replace it with something a bit better. 8-)

Other than that the thing is really amazingly impressive for such an aged critter!

Best of luck - 73 - Ed - KF6YKM - Southern California

Just how is the FCC giving it away? The last time I checked, The
license structure is still in tact, thus it isn't being given away.
If ham radio was going to turn into CB, It would have done it years
ago when the no-code tech license was invented. As for some on ham
radio that allready treat it like CB, They need to be dealt with so it
isnt inviting for those. Address the current problem, then deal with
what is up and coming.

Another one avoiding the question. Cant any of you liberals answer a direct question without rambling on like you have intentions of answering but never do?

Here is the question again, Lets see how long it takes for some one to give an actual answer....

Can you please explain to me again how passing a cw test of 20wpm will, prevent someone from, in your words, "have a clue as to the actual workings of the thories they are being tested on?

It figures, Someones great idea just turned dumb. I think it would
have been better to put Binding Post under the dash, that way you dont
need a cig lighter plug.

Only idiotic fools with closed minds do not accept change.
You must be one of those Extras' with one foot in the grave and the
other foot on a banana peel. You may have seniority, but you dont have
priority. Get real and wake up, because this is the year 2000, not
1941.

Its kind of funny that after all these years, These people started complainig about the question pools. Why didnt you complain before you took your test. You get your tickets then complain about it. What a bunch of bigots. When someone changes the license structure you complain because it doesnt benefit you!! I'm not going to sit here and complain about the only License Class that got royally screwed, But I will mention that The Advanced Class Op has the only reason to complain. Not because of the code, but because he is in the same boat as a general. I feel for you guys, But the constant babble is getting you no where.

Mike,
As i said in a different post, knowing you probably dont want any pitty, but I do feel for you and the rest of the Advanced users due to the fact that you are now in the same boat as a General. At least now you have an advantage and all you have to do is take the Extra written and present it to a VE after April 15th to get your Extra ticket. Only question I got is, Since you are an Advanced, Will you have to take the complete Extra class question pool after April 15th which includes the Advanced questions as well?

I recently have taken several of the Advanced sample test (without even studying for it) on QRZ and passed but dont know morse that well to become that class of operator. Now that the code requirements are lowered I can do what I wanted to since I first got my ticket and had a strong interest in ham radio. Now that I can go for it, I will be doing my best to get there.

Hi Fellas;
I have for SALE:
Almost mint TT Omni VI(not +)with matching speaker supply and manual.
Included is a 1.8 SSB filter option. This is off the top of my head and can
supply actual Model numbers or S/N's later!
Am assuming this because when I press 1.8, you can hear it narrow down a bit.
Only problem is that there is about a 5-7 watt carrier on LSB only. I am not a
tech and have not even attempted to adjust this as I am sure it can be. I do
not have any paperwork.
Price is $1300ppd Conus.
A great deal! Cost was about $2499.
Thanks es 73....Rich WA2RQY (1961)

Bought my HTX-10 couple of weeks ago and have made 47contacts on it already including Trinidad/Tabago, Cuba and Japan. Great talking little radio. I run my mic gain at about 50% or a little less. These radios have hot audio. Using mine as a base with and Solarcon A99 antenna cut to 10meters. Great little radio.

> several times by Motorola before getting them fixed. They are VERY good
> now.

"VERY good" compared to what ? A Kenwood ? The MCS2000 is a flimsy piece
of plastic junk ! Unfortunately it reflects the attitude of the new group
in charge at Motorola - put out cheap, poorly thought out low cost, low
end junk to compete with the proliferation of inexpensive mobiles put out
by other companies.

> Nice radio all around, but I like the Spectra series better. Too bad
> Motorola orphaned that line.

Well, not really, the Astro Spectras have picked up the torch. Also
I believe the regular analog Spectras are still available on a 'per
customer' basis. (ie. if you yell loudly enough, you can get one).

> > BTW, this is becoming the standard radio for police and public
> > safety.

AHAHAHAHAHAHA....you wish ! it's a piece of shit radio, the only
agencies that are buying into them are the ones that can't afford
Spectra's !

Anyone that thinks a 110 watt A-9 Spectra with INTEGRATED siren
packages, INTEGRATED vip capabilities, and Astro IMBE capability
is inferior to a flimsy piece of plastic, that uses all kinds of
hideous add on kluges to achieve the same things a Spectra does,
is smoking crack ! Also let's see an MCS2000 do OTAR, it ain't
happening !

It's a junky piece of shit ! If you have a say in it, insist on
a Spectra !

LONG LIVE SPECTRA/ASTRO SPECTRA !!!

Rated for 20 amps doesn't mean what you plug into it will draw that much.
That is just the max it will handle.

It is safe to plug in anything that can use the connect.
(I *could* plug my speakers into my home's walloutlet ...but 240 amps of
white noise mixed with 60 cycle hum would prolly put my wife, and the
neighbors 'over the edge' methinks :)

-GE (yassir.. the speakers would handle it.. they are good 'uns)

Hello, My name is Rick. I work for an Icom dealer and do the service work on the Icom radios here on Guam. Are you trying to "open up" the TX on the IC-M710? If so, the mod is done with dealer programming software. I am not aware of any other modification (hardware wise) for this radio. You should be able to take the radio to any Icom shop and they will be able to give you general TX coverage or at least open up the ham bands for you. The only thing is that in doing so, Icom will not guarantee the specs outside of the Marine bands the radio is intended for. In any case, I have had excellent results using this radio on the ham bands.

73 and good luck.

Really? Where are the alphabet and syntax rules for the Morse language?
I was under the impression that Mr. Morse spoke English and invented a
coding system for the English language and it was originally designed
to mechanically punch holes in paper tape. If you're not coding the
English language, how do your fellow American hams ever understand
you?

Morse code and Ohm's law are learned exactly the same way. If you
use it, you remember it. If you don't use it, you lose it. After
49 years as a ham, I am very practiced in the use of Ohm's law.

Well, not exactly. There will be no new Advanced after April 15.
Until that time, we advanced hams don't have to repeat the
advanced exam. All we have to do to qualify for a future extra
license is pass the present (4B). That's what I intend to do
tomorrow.

With all due respect Cecil, the dictionary suggests repetition . I don't see where the word 'rote' applies to CW at 20 WPM. The tests are changed regularly. Simply put, you will not do random CW at 20WPM with rote memorization. On the same subject, why in the world does any one want to make an issue out of one's ability to do 20WPM or 2 WPM. What possible difference does it make? Does that somehow make one person 'better' than another?I don't think so. This coming from a person who has been in Amateur Radio since 1950 and operates regularly at 35 WPM. I only just wish that we could all get along better and make a better attempt to get along. There is plenty of diversity in Amateur Radio for all interests. 73.....

Time to start moving some extra things around here:
Ham/repeater related gear

ACC Shackmaster SM100 V1.7 with manual $600
(missing one button on front panel)

Midland 13-509 220 rig (SOLD!)

CES 510 simplex autopatch $100
CES 520D Duplex patch $150

Yaesu FT127RA 220 synthesized rig $150
(had buyer but got my reply back late to him..and he had
bought another rig by then....)

ADD 2) FT33 220 Mhz HTs with FTT4 TT pads $350
Lots of batteries and accessories included

Commercial gear
Midland 70-1080 programmer upgraded to -A status $550
(for Syntech II and XTR series)

GE Test set for MSTR II, etc (SOLD!)

Measurements 560 FM signal generator (works good!)$200

2)Midland Lowband HTs 5watt/Synthesized 16 channel $100
42-54 Mhz range only....good for 6mtrs

Make offer on what you see if you wish...I will consider
ALL REASONABLE offers...NG readers, REPLY DIRECT! I will
not read the NGs for replies.

Hi Jim, I don't really know what percentages have the medical waiver. I can tell you as a VE that in the last 150 tests that I have administered, there were none....zero. I did have one kid who claimed he could not hear well enough to hear the code. I was able to prove to him that he really just needed to learn the code. I proved to him that the code oscillator tone frequency could be changed to suit a frequency that he could hear better. He did learn and is a very active ham today....without a waiver. Our club is very active in VE testing and I think the cure for that waiver business is to try to work with the people instead of against them. 73 W7AX

From Webster's: "rote - repetition carried out mechanically or unthinkingly."
That is an *EXACT* description of what I'm doing when I receive Morse code.
Code gurus tell us to, "Repeat the code over and over until you can do it
without thinking about it".

Actually, all Extras, including myself, who passed a 20 wpm multiple guess CW test are inferior, as the prior test required 1 minute of solid copy.

On the other hand, the guys who took the test long ago are also inferior, as they didn't have to answer the questions about satellite uplinks and downlinks.

This is a really stupid topic.

Ummmm, Mark... what would make you say such a clearly disproven thing?

After all, all the unacceptable changes came about by whiners such as
you (or at least those you appear to be supporting).

As such maybe if I and others complain enough we will get what WE want,
ya think?

G'Day,
I'm hoping someone can help me with a simple request which I'm asking on behalf of some microprocessor experimenters.

My main questions are geared towards building a low wattage (<500mW) transmitter which uses a removable crystal (27 or 40MHz) for frequency selection. The receiver would need matching capabilites (frequency modification via crystal subtitution) and AGC. I've a grasp on the concepts of FM Tx and Rx using PLL, but no practical experience. I have built my fair share of crystal sets, and so have an understanding of AM detection, but no experience using IF and subsequent mixers.

If someone has a URL for a "dummys guide to basic RF design" or something that would help (circuit diagram for RC Tx/Rx sets, or crystal based Tx/Rx pairs in the HF bands), I would appreciate it.
I'm using 27MHz and 40 MHz since they are the standard frequencies for RC cars in Australia. I plan on using crystals for RC cars (from high Q in Sydney) in my circuits. This way I'll be avoiding my experiments causing any issues with DOTC. The hoped for design will use a "data in" and "data out" pin in the transmitter, receiver respectively. I beleive that RC cars are limited to a bandwidth of 10kHz, so our processor designs would have to take this into account.

I would appreciate any assistance i can obtain. Most of us don't have a lot of the FR test instruments you would have, so designs which do not rely so heavily on these instruments would be appreciated, However if this reasoning is unreasonable, then please let me know. Please send info to des.bromilow@citec.com.au and to the list.

Many many thanks in advance,
Des Bromilow

Any 5wpm licensee other than Novices or current Technician Plus
licensees are inherently inferior.

They just are.

It is that simple.

>
> NO. They could have gotten a medical waiver.

IOW they could have been cheating whiners. Since I know at least one
woman who ran 35+ wpm cw nets and who is blind and deaf I challenge
anyone to prove to my satisfaction they NEED one of those waivers.

It was the ultimate in whining and IMHO since it has been proven that
the waivers were abused continuously I feel that anyone who got one
should have their license pulled, be out of the hobby for 5 yrs and then
have to retake any exams to prove they made it legitimately.

> What percentage of 13/20 wpm
> hams get waivers? I don't know - such stats are not usually
> publicized.

They should be. Public documents, after all.

> licenses don't tell you either. I've seen estimates of as high as 20%,
> though I find that rather hard to believe.

And like I said above, purge them all and the ones worthy of the license
will requalify. It will be a self weeding deal.

> The mere possession of an Advanced does NOT mean the holder passed 13
> wpm.
> QED.

For most they do... most of the cheaters will have likely gone for
Extra.

I say purge all the whining cheaters.

have ended with "....50wpm code who will be found waving his
PHD around like some battle flag."

I have been informed that a wellknown western ham who
routinely operates highspeed CW indeed has his PHD. Of
course, those not personally acquainted with him probably
wouldn't know it.

There's info on building a 'roll up' J-pole from 300 ohm "TV" twin lead on my web page. URL below. Click on the Antennas link.

Mine is by far not 'THE' site for this info - there are many, many sites with hidden and apartment antennas. Another idea may be to try a full wave loop taped to the window. Lots of options.

Good luck!

Finally, someone out there figured out that in order to keep the amateur service it has to have a political critical mass. The politicians count votes when it comes to spectrum, if you want space on the usable portions of the spectrum we had best bring in plenty of young people. If code has to go to accomplish that, then good riddance to code. Personally, I copy about 13 wpm, well worth the effort...today I can copy the identifier on repeaters and an occasional aurora contact on six. Hardly worth the effort.

If you really want to keep people out of the hobby you should make the copy RTTY manually.

I owned them both at one time and you definitely want the TS-830S. In my opinion - one of the best Kenwood rigs made. Excellent sensitivity, VBT, superb TX audio, WARC Bands on the TS-830S make it the preferred buy. An Astiac D-104 will make it sparkle and crack pileups. For split DX operations, you will need an external VFO, two models were made as I recall. I had the VFO-230. See the second unit just to the left of the TS-830S at URL:
http://www.bcn.net/~daveg/metal/ts830.htm
If you want to gild the Lily -- The Station Monitor SM-220 (and TS-830S) can be seen at URL:
http://www.firstname.com/kenwood/

Some early TS-830S models had a bobbling digital dispay problem - solved with a star washer under a PC board -- be sure your prospective buy doesn't exhibit this problem - especially under temperature changes.

The TS-830S had vacuum finals 6146's and the rig was very forgiving of hi vswr, not the case with solid state finals for sure.

I checked the sensitivity of the TS-830S vs the TS-850SAT and the TS-830S was as good if not better than the TS-850SAT. The TS-830S has a manually - tuned RF stage, the TS-850SAT has a broadband filter scheme.

For appearance -- a gold version was made. Quasi-military look to impress visitors, hi hi.

Good Luck

I have the 5V battery for the FT 50 but I notice when I'm involved in a qso, the 1st tx is at 5W but the following transmits are at reduced power...probably about 2W or so...according to the LCD on the face of the radio...anybody have an idea as to what's happening?

3268. Re: FT-50 Mod.

Source record: 87003

I doubt you'll do much damage to the rig if the ant is close to right.... BUT please note that I do not think that radio is TYPE ACCEPTED for commercial use. I do a lot of work with CAP / RACES and have moded my radio to monitor the public service bands and could transmit in an extreme emergency.... but I would NEVER think of using that radio for public service work for general use.... it's not type accepted for that.

ICOM IC-706 HF + 6M + 2M Radio $1400(Canadian) or reasonable offer
Comes with MB-62 Mobile mounting bracket for faceplate & OPC-581 3.5M
separation
cable, original box, spare power cables, manual, and manual for CIV control.
Excellent like new condition. Radio specs are
100W HF all mode, all bands, except AM which is 40W,
100W on 6M all mode, and
10 W on 2M all mode. (Amplifier listed below)

Heil HM-10-Dual microphone (type 4 and type 5 cartridge) $150 c/w FS-1
Foot switch and MA-1 Adjustable boom.

MFJ 949E Deluxe Versa Tuner II $150 Like new, works great

Daiwa LA-2080H 2M Linear (FM + AM/SSB/CW) amp with preamp $150 Brand new
still in box

Bencher BY-1 Iambic Paddle (black base) $75

All prices listed in Canadian currency. I have been using the station for
approx 1 year, and now must sell quick. I have received excellent
signal/audio reports from all around the globe.
I would prefer to sell the items as a package for $1800 obo but will
consider seperating for pricing listed above. To buy the tranceiver, you
must provide me with proof of a valid amateur radio licence.

thanks for the links everthing that one would need for building an ant. I
will search for the way I would like to do it with the alarm tape just got
to find out the formulas for 1/4 1/2 5/8th wave for and a way to make dual
band 2m/70cm ant with it.and figure what would fit in the window pane

Do you have the "transmit power saver" feature turned on? It varies
the transmit power based on the strength of the last received signal.

3290. Internet Accessible AR-Cluster

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-29 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <86vqaqllf1@nnrp1.deja.com>
Source record: 87025

You are welcome to connect to the internet accessible AR-Cluster at
KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH.
Please enter your QTH in the form: Chicago IL or Oslo Norway so that we
will know where all our new friends are from! You will also be
reminded to SET/LOCATION, that's optional but recommended. If you set
your location, then the AR-Cluster will calculate beam headings for you
to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION your_call

You can correct any errors using the SET commands.

For more information on AR-Cluster including a Logon Tutorial and
Command List go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet
connection. Its a huge advantage as then your logging program will
monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions for using software already a
part of Win95/98:

First connect to your ISP as you normally do when using the internet.
Click Start then click Run.
In the box enter "telnet 209.32.226.63" (without the quotes of course).
Now click OK.

You should now be connected to the KC0DJO AR-Cluster.

Enter your call. If what you type does not display, then you will have
to turn on local echo. In the Telnet window click on Terminal /
Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C

HELP

Welcome to the KC0DJO AR-Cluster.....and 73 de Ron N5IN

Sent via Deja.com http://www.deja.com/
Before you buy.

Hi,
I have a UHF Motorola Repeater for sale. Includes 15 watt
solid state repeater, squelch gate card, community PL card,
audio mixing card, standard motorola controller, 60 watt power
amplifier, Motorola 3 foot metal indoor cabinet rack, set of
Sinclair UHF duplexers (flat pack) and manuals for tuning and
service for both repeater and duplexers. Currently on 461/466
with channel elements installed. Easy retune to GMRS or
amateur 70 Cm band.
Price is $300 firm you pay shipping or come pick up.

Photo at: http://www.xprt.net/~joentam/binary/msy_rpt.jpg

thanks,
Joe K7JOE

3297. Alinco DJ-V5TH Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-29 00:00:00 UTC
From: Wayne Montague <beemoe@sympatico.ca>
Message-ID: <389369DE.2F2F@sympatico.ca>
Source record: 87032

Hello -

I've been doing some research on some VHF dual banders. This Alinco is advertised more or less to be 76 to 999 MHz capable. One small 'detail' seems to be missing in the sales glossy. There is NO mention that this radio has AM receive capabilities.

I would like to know if this radio has AM capability and if it can be user selected to operate between 115 to 135 and 225 to 400 MHz(?)

Yes, I know it would be dumb not to be able to receive AM in these bands, but the literature omission of AM is rather obvious.

Thanks -

Wayne

3298. NEED 30 amp P.S.

I need a power supply that will run an HF rig. It should be about 30 or 35 amps supply 12 VDC. I have an almost new (only used a few times) MFJ 969 300 watt, roller inductor HF and 6 meter antenna tuner that I will trade for the power supply. The tuner is in its original box and packing. I only used this tuner a few times before I bought the 3KW version of tuner from MFJ and have not used it since.
Please contact me at k7bli@arrl.net

Tks,
Duane.
Thanks,
Duane

That's like saying a marathon winner only ran fast one time in his life.
Unlikely.

>Properly handled and publicised, this change can bring millions of new
>hams onto the air in the next decade,

Millions? Yikes! There's already a code-free license for V/UHF which
didn't draw millions, so you must believe that with the creation of
a slow-code HF ticket, millions will flock to HF.

Let's crunch some numbers: Our M/HF spectrum consists of 3.75 MHz,
with say, only half of it, 1875 kHz, useful for communication at
any one particular time of the day. If suddenly, as if by magic,
all current licensees were granted M/HF privileges, we could possibly
have 670,000 have attempting to fill that 1.875 MHz. Okay, I'll grant
you that folks have to work and sleep, so let's say at any one time,
we have one-fourth of all 670 kilohams on the air, with two per QSO.
That would mean each QSO would be separated by just 22 Hz. =:o

Okay, let's pretend that all 3.75 MHz is available all the time,
with say, one-tenth of all operators on at any one time: Now
each two-person QSO is separated by 112 Hz.

Worried that I didn't take into account frequency re-use? Suppose
we could manage three simultaneous QSOs on a single frequency;
each such grouping would be separated by 336 Hz.

That's with our current 670 kilohams. And you desire "millions"?

Check option #15 in your setup. I believe you'll find this option
turned on. This is the TX power saver, and adjusts your output power
based on the repeater strength. I tried it here, and it doesn't work
very well. This is only a guess from this end, but it sounds like your
problem.

Amateur radio operators are already thin on the ground in many
areas. If we halve the number of operators, they will be even thinner
on the ground, and that would greatly impact amateur radio's ability
to supply public service and emergency communications.

A declining service is also unlikely to be able to justify a claim for
the amount of spectrum amateur radio now has. That's just political
reality. Numbers count very strongly in any political decision, and
amateur radio exists due to political decisions. We overlook that
at our peril.

Hello Everyone,

Please take just a moment to have a quick look a the tube tester that I have listed at eBay Auction. Someone is going to get a great deal on a great piece of gear.

Follow this link to the listing

Thank you for your time,
David Honeycutt

3321. Re: FT50 power question

Newsgroup: rec.radio.amateur.equipment

Message-ID: <3893B727.26D0EA8B@pacbell.net>
Source record: 87056

First, with a 5v battery, you're not going to be putting out 5 watts. You have to be using the 9.6v battery for 5 watts. But, what you're seeing on the meter is probably due to the automatic TX power-save option. If you have it on, it checks the receive for signal strength and then reduces the radio power.

wf3h@ptd.net wrote:

Guido,

Try this...
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.

Interesting question.

Since I have both supplies, and a direct reading ammeter available on my test bench (with selectable shunts for 2,25,and 50 amperes), I decided to check it out.

The RM-50M (same supply, but rackmount) draws 7800ma at startup...let's see 7.8a x 120v (reg.) equals 936 watts...no wonder the lights dim when you flip the switch!

Almost immediately (as soon as the caps charged, it settled back to just over 400ma and stayed there. Taking into account the bleeders and pass transistors, this seems about right.

The MFJ drew less on startup...about 1200ma...but it stayed there. The fan draws about another 30 ma when it kicks in...it must be on the 12 volt side.

My "Brute Force" power supply delivers two separate outputs: 12 volts at 24 amps, and 13.6 (that's right 13.6, not 13.8...15 volts less two mondo diodes)volts at 140 amps. This is a hybrid constructed from 4 Sun Deskside computer power supplies, and its mounted in a Sun server rack. This puppy drew 22 amperes @240V at startup, and settled back to 1850 ma at idle , which is 444 watts...200 for the diodes, 140 for the fans, and 144 must be going up as wasted heat.

Let's see...outputs: the Astron was within 0.08 volts from no load to breaker trip. There is no perceptible noise in the receiver.

The MFJ wanders a bit from no load to full load, a total excursion of about 0.22 volts. Above 40 amps, there was lots of hash on the output. There was no discernable noise below that level.

The monster's voltage didn't budge more than 0.07 volts from no load to 125 amps, which is as far as I can test, but I could probably use more filtering, since the hash started at about 105 amps. By the way... I forgot to disengage the tester's load switch before I hooked up to the big supply, and had to remove the tester from the terminal block , 'cause the prod welded itself to the terminal!

All-in-all, it was an interesting way to spend a frigid Saturday afternoon!

I wonder why all this hoopla is taking place on a "computer" based newsgroup instead of over the bands?

Here, they are automatically "published."

On the bands, they might be sending their message(s) into thin air for all they know. THAT'S SCARY - to them.

Used to fly down to Denver to browse through Tech America, Wow, what a nice selection of parts and equipments. I bought enough ICs and other parts last May to build several Bioelectrifiers as well as a number of Happy Flyer DF units.

Used to browse the www.techamerica.com website but now get referred to R-S without the ability to browse the TA site. Bummer!! Don't even want to fly down to Denver anymore.

Suspect you're smelling dust of some sort from the heating ducts, not
ozone. Allergies to dust can yield watery eyes.

Sorry to burst your bubble, but NO, you can't get the power from Volts times Amperes for a lightly loaded power supply. The exciting current for the power transformer is high, and will dominate the current reading, although it's not in phase with the Voltage. So the reactive power will be high but the Watts won't.

The best way is a genuine Wattmeter. I have one; it's a moving coil type. But there are other ways, such as with an oscilloscope, but not as accurate.

You are partially correct on the Power Stroke being injected with oil pressure, but you left one thing out....the injector is still operated (opened) by a 120-140 volt electrical pulse. In "Dieseland" this is called "electric over hydraulic".

I'm looking for programming software for the following radios:
preferrably windows driven, but some are strictly DOS based.

M1225 series
GM300
Radius series lowband, VHF, UHF
Maratrac
Maxtrac

If anyone has the cables for these radios, I might just be interested in those also, rather than making them myself.
Ideally, I'd like to find someone going out of business or such that has most of the common Motorola service items.
Also, I'm looking for the same for Vertex radios.

> and piece of paper is just a status thing.

For most Extras, that's all it is, because most Extras rarely (if ever) light up on HF.

Not that there is anything wrong with an Extra spending his or her entire on-air time on an HT, but too many of them think that they are something special because the were able to copy 20 WPM on ONE occasion, years ago.

I got my Novice ticket nearly 20 years ago, and upgraded immediately to Technician (thus "Tech+") by taking the General written exam. If I had ever been willing to take the time to get my code speed up, I would have been a General (and I am looking forward to the change). I will not likely go to Extra because an Extra can't do anything that I want to do which I can't do as a General.

While a lot of the Extras are whining about this change, I think that given 5 years they will see that it was the only way to SAVE ham radio. The artificial barrier imposed by "Titanic Mode" skills have kept MILLIONS of kids from getting ham licenses over the decades since large chunks of the General allocation were sliced off to create Advanced and Extra in the "Incentive Licensing" debacle.

Properly handled and publicised, this change can bring millions of new hams onto the air in the next decade, bring back school ham clubs, and pull ham radio's foot back out of the grave.

When I lived in Arizona there was a "prominent" Extra who was incapable
of operating a soldering iron. In fact, he complained that the 120W gun
that he bought to solder a mike jack was defective, because it melted
the heck out of the connector!

I would like to find a couple of old dispatcher consoles (with 19" mounting racks), preferably within 500 miles of Salt Lake City, unless you know a cheap shipping outfit. Front panels not required. Neglected or modified consoles will be considered.

Primary consideration is price.

3354. TEN-TEC QUESTION ???

Source record: 87123

I know this isn't exactly a ham question but I'm sure that there are a bunch of you that could help me with this. The problem IS in my shack, so please bear with me. We just moved to a new qth and the electric furnace produces an odor which I have been told is ozone. I seem to be the only one in the family that is sensitive to it. In fact no one else can even detect it (at least I know the odor isn't me!! hi). But I can smell it and occasionally it will make my eyes water a bit. I'm assuming if it has this effect it must be bad, but the heating companies in the Seattle area are telling me that it is harmless. Is this true? I'm trying to add improved ventilation to the area. Any other suggestions, other than switching to gas? Are there hazards to breathing ozone fumes from electric furnaces? Thanks for your responses. 73 de John, K7JY.

Works like gangbusters! When the band, its a lot like ten...just have the rig on and be there!

If you want more power, whip up a brick...something in the 80 Watt output range can be cobbled together for about fifty dollars, and you'll only be nine dB down form a kilowatt! (and still have the extra 1500 bucks in your pocket!)

My next toy will be one of their two-meter transverters!

73!

It's doubtful that an electric furnace can produce ozone.

Ozone is a carcinogen, copiers produce it, high voltage sources produce it.

Maybe I'll type a little slower. The "giving it away" was stated,
Since the complete thread is not here, you cant see that.

About the No-Code Techs and CB, Your Right and Wrong. Again since the
complete thread was left out, The whole reply was towards HF/VHF/UHF
thus meaning "Ham Radio" like stated, Techs do have voice priviliges
on VHF/UHF the last time I checked.

I dont argue with the fact that others would say Ham Radio has
somewhat of a CB Attitude on certain frequencies, But I will say not
all Ham is that way.

Hi Andy,

I bought a Kenwood TS-570DG for 899 Pounds from Martin Lynch and Sons
in London a few months ago and got very good service and fast delivery
to Sweden. You'll find them at http://www.martin-lynch.co.uk/
Their special price for the 847 is 1349 Pounds.

Multicomm 2000 (http://www.multicomm2000.com/index.html) also a UK
supplier sells the 847 for 1199 Pounds.

Waters and Stanton (http://www.waters-and-stanton.co.uk/) probably the
largest UK dealer is selling the 847 for 1699 Pounds.

For some good reviews and info on the 847 go to
http://www.en.com/users/rayd/ft-847/

Good luck and 73,

It is also as poisonous as Hydrogen Cyanide, Carbon Monoxide and
Hydrogen Sulfide as it is friendlier to Hemogloben than normal Oxygen
is.

I am interested in building a portable power belt for a 6volt device.
I had seen one a long time ago, and I am unable to find it with a DEJA
search. This one used gel batteries. If someone has a design, I
would appreciate some help. Thank you for your replies.

I have a Johnson T-R Switch for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=2
42572036

(that is item 242572036)

The description is

This is the venerable E. F. Johnson T-R switch which provides "break-in"
operation with a separate ham transmitter and receiver. The Johnson is
arguably the best designed of the crop of 50's T-R switches, and this
example works well and looks good. There is some surface corrosion on
the front panel which should clean up just fine, and the chassis is a
bit dusty, but otherwise it is in good condition. It worked well when
I took it out of service a few years ago, and I stored it well, so I
believe it to be in good working condition. As with all electronics of
this age, however, this is sold "as is." Comes with the manual and a
couple of magazine reprints discussing the design and use of T-R
switches. A BNC connector has been added in place of the stock probe
pin jack, but I have the stock jack and will include it (if I can find
it) so the winning bidder can restore the switch to stock condition if
desired. Add this to your boatanchor station for the ultimate in
operating ease !

Auction closes 1/30/00

Thank-you.

The easiest way to find out if it's the PA is to bypass it. Remove the
module and run a wire to the wattmeter from the point where the signal
is injected into the PA. If the numbers are pretty much the same, then
your PA is night-night.

The mods are available at www.mods.dk

ONLY PROB IS ONCE THE MOD IS DONE, the programming software will no
longer recognize your radio. To me it wasn't worth it as it would
take you 2 mic's to program it after you wore the buttons off on the
first one!

Just FYI.

Here's an idea folks --

What about having a "20+ WPM" (ARRL?) certificate or award that could serve to recognize those who believe that recognition of their code speed is crucial to their self-esteem. That way, the technical questions related to licensing can be segregated from the code speed / rite-of-passage debate.

Sorry, pal. The direct injection uses high pressure to be able to
inject into cylinders with high pressure, therefore the hydraulic
pressure boost system. The injectors are actuated by 110v, via the PCM
(powertrain control module for the uninitiated) and the IDM (
injector driver module for the same) The collapse of 110v in the
injector windings creates mucho RFI via the voltage spikes induced
into the windings. There is no more injection pump as in previous
diesel engines, therefore no mechanical way to adjust the timing
either. Timing is determined by the PCM, while actual engine position
is relayed to the PCM by crankshaft position sensor. Also, there is no
mechanical throttle linkage, save for the pedal and pedal pivot. From
here a variable resistor with a 5v reference supply varies a throttle
% to the PCM, which then holds the injectors open longer to allow more
fuel into the combustion chamber. These ar RFI nightmares!

It's a good idea. It should also include SENDING 20WPM using a straight
key.

The testing should be done at hamfests, with results posted on a board,
so that we can properly recognize those who pass . . .

. . .and those who DON'T. hehehehehh

I lost virtually all output from my IC2000 2 meter 50 watt radio. it only puts out less than 1/2 watt. The meter indicates full output and changes respectively with change in front panel lower panel settings - indications are one thing but actual output has been virtually lost.

I suspect the the power output module is bad. It is the SC-1091 RF power module.

Was wondering if anyone else out there has had same problem and end up replacing the rf module. RF PARTS sells the replacement modules like they are replaced quite often. Does anyone know how I can check the module for sure to see if if it is bad??? Anyone know of Ohm resistance checks I can do on the 4 pins from the module to see if in fact it is bad??? Thanks

Source record: 86906

I would like to get a shortwave radio that sounds simply wonderful.

My reference points are the NC183 or HQ180 I had when a kid.
The 183 had push pull tubes on the output, and a great big speaker.
The 180 wasn't far behind.

Anyone make anything like that these days?

The guys in rec.radio.shortwave rave about the RX-320 for a $300.00
radio. If you like the way the Ten-Tec interface looks I think you'll
really be impressed with Clifton Turner's (KF5OJ) FREE interface here;

http://pages.prodigy.net/kf5oj/KF5OJ.htm

I've been 'sniffing' at the radio too , there's about 5 or so
interfaces available for download. Clifton's appears to be the neatest
one I've seen.

>
>I wonder if I can plug my ham antenna (PL-259) into this radio?

I don't think so, but you can grab a barrel connector and work
something out easy enough.

Before you decide, take a look at the R.L. Drake radios at
http://www.rldrake.com/frs/index.html
I bought a couple and they are great little (and I mean little)
radios.

I sent a request in for you to Kenwood to send you information on a factory authorized shop. If you would rather take it to a shop that other hams in this ng suggest I wish you luck. Hope this helped. I believe that the main service shop for the east coast is in Virginia Beach, VA. I'm not sure on that though.

Hi Helmut,

I would guess that you have no problem.

Some of the responses you've received, however, are quite off the mark!

You have stated that the measured power output is indeed 100 Watts under both CW and SSB whistle. This strongly suggests that there is no real problem. The important consideration is that the power output should reach its maximum when the ALC begins to show on the ALC meter. This should be the case for both SSB and CW.

Just make sure that some small amount of ALC is being produced. If you're not using the processor, this is controlled by the MIC control. When processing, however, you should use the PROC control to adjust the appropriate compression level; then check ALC to make sure that this level of compression is indeed generating some ALC. If not, this may indicate that internal adjustments are needed. It is not necessary, however, that the ALC meter be reading anywhere near full scale.

Regards,

Keith (KS9C)

>>>> of yours.

>>> I chose not to. That is not the same as "can't."
>>> If it matters to you that much, email me. There is no need to embarrass
>>> him in public.

So it's better to embarrass all "prominent" Extras in Arizona?

>> At this point, it is either embarrass HIM or embarrass YOU. If you
>> provide his call, he'll at least have the opportunity to refute your
>> charges.

>Why would I be embarrassed?

Because you got caught making up "facts" again. If you want to carry
any credibility on the NGs, back up your examples with evidence which
can be confirmed by third parties, or at least give the "victim" in
question a chance to defend himself.

>The ham in question made a big name for himself in the Prescott, Arizona
>area in the late 1980s.

So now you've pinpointed his approximate QTH and have limited the
embarrassment to just "prominent" Extras in Prescott. The only fair thing
to do now is to give his identity and provide him the chance to respond
to your accusations.

>The only one I'm embarrassed for is Jeff. He is so impressed with being
>an Extra that he thinks all Extras are something special, and is
>convinced that I can't be telling the truth about this.

Wrong again. I'm only interested in giving an accused a fair chance to respond so as to hear both sides of the story. There are too many one-sided accusations made in this forum. Very distasteful, and not gentlemanly at all. Fight fair, Keith.

Range is more than the difference between .5 watts and 3 watts. FRS
radios cannot use external antennas, while GMRS can. The rubber duck
antennas are infamously inefficient, especially inside a car. This
could be more important than the power difference, especially if one of
the stations is a car or base station.

I like my FRS radios, however.

I have here a 1956 ARRL Handbook. It's got a soft black cover and price marked at $3.00 but I'm ambivalent about selling it. It's in pretty nice condition.

I like looking through it, especially at the ads that remind me of an earlier time in ham radio. There are ads for Hallicrafters, Collins, National, Hammarlund, Johnson, Waterman, Walter Ashe, Vibroplex, Heath, Gonset, B&W, and lots more.

Chances are, its value on the used market is less than I'd be willing to take for it, but make an offer anyway.

Thanks Mr. CBer, you have just proven that Morse is a coding system, not
a language.

> > After 49 years as a ham, I am very practiced in the use of Ohm's law.
>
> But clearly not in the use of cw.

CW is my favorite mode. I rarely use any other mode. You lose, Mr. CBer.

We're talking about the coding *SYSTEM*, not the content of the communication.
Please describe how you use CW without memorizing the code/character
translation. Do you develop Morse code from first principles every time
you use it. You seem not to know anything about Morse code. I suspect
a CBer on the troll.

> It is the same as your french teacher telling you not to
> translate/convert but to actually think in the language naturally.

Ah, but nobody thinks in Morse code. You really are a CBer, aren't you?

Suggesting the use of CB for cross-town communication (with hand-held
radios, no less!) is not a very reliable idea. The last time I tried

this on CB (in the L.A. area in the mid 70's) it was S9+ noise (QRM, QRN and heterodynes) all the time, and from what I've heard, it's only gotten worse. A four watt handheld might be good for a couple of blocks though... FRS is much more effective for what you want to accomplish.

3428. Help with IC-735 Troubleshoot Please?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-30 00:00:00 UTC
From: Darrell Franks <defranks@hctc.com>
Message-ID: <s9a57o145io116@corp.supernews.com>
Source record: 86943

Hi all:

I have an Icom IC-735, which has been a pretty good rig over the years, but which has developed a problem when transmitting in SSB. The rig develops full power in CW mode, which is my primary mode, but in SSB it has become noisy. The noise doesn't seem to be cyclic, and it exists whenever the transmitter is keyed, whether or not there is any microphone input. BUT, the noise is much louder when the microphone gain control is turned up. Additionally, the output power is reduced in SSB mode. When I use voice-compression, the power output is better, but still not at full-power.

Anybody seen this problem before? Anyone have a suggestion of where to start looking?

Thanks,

Darrell

> remain alive and well. If they don't, only they are responsible
> for the consequences.

Consequences? Really? So while you and yours have been
teaching "cw",
everyone else on the planet have been rubbing their hands
together
with great anticipation. OVER HAM ALLOCATIONS! What is wrong
with you?
For the last few years all I've heard is whining over all
those new
codeless people... all WHO? The numbers are pathetic... If
we don't get
some REAL numbers soon... there won't BE any frequencies
left. Look around
you. Look at the malls, all those kids with portable
wireless "things" no
matter how bright or gheeky they are... you see anyone with
a code key? Hmm?
They play with digital equipment like we played with the old
tube things.
Meanwhile more and more pressure is put on the band
allocations. Sigh.. oh
for those days when you could get hot with the gap... spark
gap that is...
Oh? those days are gone eh? obsolete you say... well so is
the "amateur radio,
ham, elmer" or what have you. The days of exciting radio
toys are passing...
fast.
You just wait for the coming bio/nano revolution, it won't
be long now. When
that stuff (FRPG's) goes surplus how you going to keep them

down on the Radio
farm then? Say by-by to all or at least most of the current
seriously under used
frequencies we do have. Then what? Reconstruction's?
Reenactments? Radio models?
I hope you know what the exhibit will say... "CW, the end of
radio as we knew it".

Remember the Dinosaurs.
and,
the "Hams".
Both good examples of the walking dead.

Nope, don't have those except for 12 ga Winchester Model 12. I have
mostly NATO/UN calibered weaponry so can use ammo of disabled
invaders.

Do have one L-O-N-G range weapon so I can "reach out and touch
someone."

I'll let you figure out what that is and hope that you are not on
receiving end of 1/2-inch diameter lead slug with .22 short inserted
and small amount of mercury for dependable dropping!

Definitely NOT a sporting weapon. Meant for disposing of vermin!

3437. Kenwood TM-D700 Mods?

10 WPM RTTY isn't so hard either. But 60 WPM RTTY is of similar
difficulty to copy by ear as 60 WPM Morse. I can recognize RYRYRY
and my call sign in 60 WPM RTTY, but that's about all I can do by
ear with it. I can't even do that with Morse, but that's because I
don't operate much Morse. I do, or did before PSK31 came along,
operate quite a bit of RTTY.

Not to mention they might have to use a callsign as a signature, rare among
the most vocal here.

Tech America changed its name to radioshack.com, so there no longer is
a techamerica.com, just a pointer to the new site, but it still carries all the
same parts (actually more now than it did). Learn to navigate the new site.
I just went over there and browsed their selection of solders, 58 different
products, including the solder paste that I wanted.

> charges.

Why would I be embarrassed? It isn't like Jeff is going to call him up and hear "Yup, I dunno the first thing about working on radios." The ham in question made a big name for himself in the Prescott, Arizona area in the late 1980s. I have no idea if he is still there or not, and I really don't much care. I stopped paying attention to him after the mike-jack incident and after I had to make a 120-mile round trip to go turn a serial cable into a null-modem cable because he wasn't able to desolder and resolder two leads in a DB9 connector.

The only one I'm embarrassed for is Jeff. He is so impressed with being an Extra that he thinks all Extras are something special, and is convinced that I can't be telling the truth about this.

About a year and a half ago, the TV station I was working for had an apparent problem with the captioning system. The Vectorscope showed a visual trace of the incoming caption signal, and (while the engineers were starting to tear apart the control room, trying to figure out what was happening) I took a moment to look at it. The signal was a repetitive set -- ABC's version of RYRYRYRY. When I explained it (these guys didn't even know what RTTY was), they contacted the network, who confirmed that they weren't sending text -- they were sending RY<clear>RY<clear>RY<clear>!

Hi Al,

I have noticed the same observation on mine while running it in SSB mode. The signal strength meter seems to work fine for listening to FM repeaters though. I am only a Tech-Plus (for now) so I don't have operating privileges for 10 Meter FM. I love the radio though and would recommend it to anyone interested in it. For $149 it's pretty hard to beat.

I have a Kenwood TS950SDX that I bought used from the second
owner. The serial # is 41000017. I think that translates to October
1992, 17th unit produced that month. The rig is in mint condition, and
works extremely well. It has all filters installed, the voice module,
and the digital recording unit. I know from looking on the Kenwood web
site, that later units have more features that can be accessed via
programming menus. Is it worth it for me to send the unit out to have
it updated to the latest specs ??? I'm sure it can use an alignment
also after 8 years. The problem is that it works flawlessly now--I
don't want any problems. All of you late production 950 people, or
people that have had their radios updated, give me your thoughts.

I've been looking into getting a 2-way radio. My first decision is between the FRS and GMRS. .5 watts or 3 watts. I'm leaning towards the .5 watts. They are about 100 dollars cheaper, very small, and there are a lot more to choose from.

I plan on using it for rec purposes, boating, carivaning, Disney world, biking, paintball.

Does anyone know one I might want to check out? Or maybe share w/ me some more insight on what to look for?

In my appreciation,
Phill

FRS should suit these purposes very well.

Kenwood's original UBZ-LF14 is one of my two favorites. Excellent performer. CTCSS. Scanning (with Kenwood's speaker/mike. Although only 300mW out - this has not proven to be problematic in my informa testing.

Bill's @-Way has these for only $60.00 each (yellow) or $66. each (black). http://bills2way.com

My other favorite is the Vertex VFX-10. All 14 channels. NOAA Weather freqs, too! Uses DCS encoding - as long as you buy a pair, you can use one of the six DCS codes to "privatize" your comms. The Vertex unit is sleek, sexy, and incredibly easy to use: just a ON/OFF VOLUMS control, and a CHANNEL selector. Couldn't be simpler to use. Built bullet-proof, too. They are closer to $90. each.

Your intended uses indicate you may want to purchase headset speaker mikes. They are available from ADI/Pryme/Premier, as well as the original manufacturers. http//www.adi-radio.com

There's a messageboard entitled "Choices in Personal Communications" that specializes in all options for personal radio comms. It is at http://www.pe.net/~atd/discus/

Who cares? I don't feel either is embarassed. Somebody provided some
hearsay evidence. Accept it or dismiss it. It doesn't matter much anyway.
The lines are drawn and nobody is crossing over. This is not a debate it
has become just a forum for everyone to vent their personal frustrations.

It depends on the max range you will need and many other factors.
If you are always going to be within 1/2 mile or less I would go with
the FRS at at .5 watts. If you need real distance, I would go for
a 27Mhz 4 watt CB which costs between $35 and $215.
the lower end being a GE 40 ch and the upper end being
a Cherokee AH100 SSB. As I said, were it me, I would go
with the least amount of money for what I need. If I want to
talk across town, go with the regular CB walkie talkie, if
you are going to be relatively close and don't need the range,
go with the FRS, if you need slightly longer range with not
as much interference, go with the GMRS and you will be
happy, the key is knowing exactly what you will be expecting
from your radios, and how much you are willing to spend to
get the exact performance you desire.

Source record: 86989
Cross-posted to: alabama.birmingham.radio.amateur,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb

I'm leaning towards the .5 watt FRS radios.

I've been comparing the different brands. The best ones I've seen so far
are:
http://www.outdoorelectronics.com/sportalk.htm Vertex/Standard HX625
SporTalk
http://www.outdoorelectronics.com/slk.htm Motorola's TalkAbout 250/280
http://store.yahoo.com/barracuda/cobmicii2way.html Cobra MicroTalk II
http://www.familyradios.com/ Kenwood FreeTalk LH

I plan on using it for rec purposes, boating, carivaning, Disney world,
biking, paintball. Range and reception seem to be the biggest issues...

I found this page that seems to have a bunch of reviews:
http://www.gearreview.com/frsreview98.asp

From what I have read the Cobra MicroTalk 3 and Motorola TalkAbout plus 250
are my top two contenders.

Most of the reviews I've found are on the Motorola. If they are really
better than the rest I will get it, but I don't want to buy just the name.
The biggest complaint I found on the Motorola is that it doesn't scan all
the 532(?) channels. I believe the MicroTalk does. But the Mortola seems
more rugged. I'm also looking for possible water resistant if possible.

From what I understand the Vertex has a long good reputation of making
industrial radios. Does there FRS hold up?

If anyone own has an opinion or advice on this please share it w/ me.

In my appreciation,
Phill

1) The Cushcraft R-5 is a vertical 12/12/15/17/20 meter antenna, it needs no ground planes. It is "as new" in its original box. It was up on my house for four hours before a neighbor demanded it be taken down (CC&Rs) (No need for advice on CC&Rs though!!). Best offer, $100 or better, takes it.

2) ICOM IC-2SRA handheld 2m/440MHz 5 watt transceiver. This is the one with the extra receiver (and it's own small whip antenna) that receives all normal modes up through around 999 MHz or close to it. Includes manuals, box, rechargable batteries and charger. Best offer over $150.

3) Standard Twin Bander 144/450 MHz FM Transceiver C5718DA. Mobile 50 watt transceiver with all the controls and display in the microphone itself. This includes the extra-long cord so the remote 'box' can be mounted in the trunk if you like. Best offer over $150. Includes original box and manuals. The memory upgrade, 100 channels, is included.

Serious offers only please.

Guido ,
I'm not sure what happened but I'd try to reset the radio before I'd send it in for repair . I'm guessing it's still in it's factory state of mind , ie. unmodified . It sounds like the battery may have gone dead and it cleared itself which I think is normal .

I certainly would have mentioned it if I weren"t sworn to secrecy. I am afraid by alluding to the manually copied RTTY I may have given it away. I apologize.

The4 reason for the RTTY of course stemmed from the lack of capitals and lower case in the Morse Code. This is an enormous weakness given you could not tell where the sentences started...you had trouble describing things such as democrat and Democrat...big difference in meaning. So of course we had to develop a system that could distinguish between the upper and lower case. Eureka, baudot.

Next time around we can discuss analog and digital baudot...but perhaps we can leave that for another night.

The only test equip you need is a multimeter. Measure the AC amperage on the 117 input with no load. Watts - Volts x Amps -- before the techie flame wars start, yes this is precise only for a completely resistive load, but it will be close enough for government work and if both supplies are measured this way will give a good indication of which has the lessor noload drain.

I've got an astron 50 chuggin away here. Will take me a while to get a no-load (has been on for 4 years straight running the shack and accesories) so tomorrow, I'll try it.

Will post it when I do. Now we need someone with a MFJ to contribute.

cheers

Moving Sale Part II

The equipment that is still available

TRANSCEIVERS.............
1. ICOM 211digital display, built-in p/supply 10 watt all mode 2

meter all mode transceiver with SM-2 Icom desk microphone $199.00
2. Kenwood TS-700S digital display 10 watt 2 meter all mode
transceiver, with a Communication Specialists TE-64
selectable PL/Encode Unit. Built-In power supply, Kenwood
hand microphone, and manual, WORKS great $250.00
4. YAESU FT-127RA 220 MHZ mobile transceiver rig works , turn on once
into a dummyload 10 watts out $80.00
5. ICOM IC-22S 2 meter mobile transceiver, turns on $40.00
6. SWAN CYGNET 270 transceiver works OK $65.00

ACCESSORIES........

7. YAESU YC-500J Frequency Counter $59.00
8. YAESU black series 601 external speaker $30.00
9. PALOMAR P310X Preamplfier $40.00
10. COURIER PORT-A-LAB mod/power/swr/field strength $29.00
11. HAL ST-5000 $20.00

WATTMETERS......

12.. BIRD 100C $40.00

13. AMECO 621 50/144/220 MHZ $39.00 untested, nice

POWER SUPPLIES
14. SWAN PSU-1 power supply/speaker $40.00

KEYERS.............

15.. AUTEK MK-1 electronic keyer $35.00

RECEIVERS....

16. HYGAIN Proscan scanner $20.00

PADDLES........

17.. BENCHER BY-1 NEEDS SPRING $30.00

ANTENNA SWITCHES

18. 6 POSITION BW $35.00

19. YAESU LANDLINER BLACK 301 PHONE PATCH $30.00
20. PALOMAR NOISE BRIDGE $25.00
21. PALOMAR NOISE BRIDGE $25.00

22. YAESU BLACK External SPEAKER for 301 series $25.00
23. KENWOOD MS-1 DC DROP IN FOR TR-2500 $20.00
24. KENWOOD SMC-25 SP/MIC $15.00
25. ICOM HM-46 SP/MIC $14.00

THANK YOU, & 73,

ALL PLUS SHIPPING CHARGES.......

Thank You & MERRY NEW YEAR..

Your all just ticked off because I can use a shot gun to blow open the door to get inside, after you had to beat it down by banging your heads against it. All of you who believe any Amateur Extra tested post 15 APR is less of an amateur than you, Remember to send me your callsign, so I can make sure not to inadvertently try to make contact with you. I wouldn't want to bring myself down to your infinitesimal level. How many of you out there are MARS members? I am, so does that mean I should look down on the rest of you who are not? No, I'm not like you!

As I said, you can always go with the SSB. The range is increased
by a very large amount, and the noise is cut by a nearly equal amount.
Concerning the size of the town (NOT CITY) I do not consider L.A.
to be a "Town" if you DO then I NEVER want to see your idea of a city.
Also, you must have completely ignored my very first statement---
"> > It depends on the max range you will need and many other factors."
heavy emphasis on MANY OTHER FACTORS .
FRS is fine for close, clear, fairly reliable communications within it's
limitations.

I agree you are not going to talk as far as if you had a mobile or base
CB, but I have had good luck talking "across town" and actually have talked
MUCH farther when conditions are optimal. I also think that you either
missed or ignored my very first statement that there are Many Factors to
consider--
such as terrain, elavation, intervening objects, level that skip is running,
local
noise levels etc... I didn't want to write a novel, just make a comment
based on my
own experience. Also, while SSB is AM, it offers a number of advantages
you seem to have ignored--mainly the greatly increased range due to MANY
FACTORS--or do you want me to list them?

This filter is no longer being made! It's sold out out at many dealers.

Three days left and only $77!

Here's the way to pull those weak ones out! DSP audio filters certainly have their uses, but we all know that the place for a filter is in the IF of your rig. This 250 Hz CW filter will work in thec 950 SDX, 940S, 930S, 850S, 690S and 450S (check your manual before bidding).

The filter serial number is 1D01 and comes complete with the original installation instructions.

I'm restoring a Drake R-4B Receiver. I sprayed contact cleaner on all
of the switches and now the bandswitch is very stiff and gritty feeling.
Does Drake use some kind of lubricant on their switch contacts that
I've washed off? If so, what is it, or is there a substitute lubricant
that I can use?

You don't describe how the noise sounds. That could be a clue.
I'd suspect the mic gain pot or a bad capacitor or resistor (cracked)
in the mic amp.

3533. What pins-to-pins for XLR mic to 8-pin jack..?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-31 00:00:00 UTC
From: law <law@nh.ultranet.com>
Message-ID: <3895F8D5.C65749E4@nh.ultranet.com>
Source record: 86770

I am trying to adapt a Rad Shack #10-1080 XLR mic to my FT-920 mic jack and was wondering if someone knew the what pin-to-pin connections to make.
I believe XLR has signal, gnd, and shield connections. FT-920 jack has pins
for gnd, mic, mic gnd, and ptt, as well as pins for VFO up/down features.
I have added a transformer adapter to take it from a balanced XLR to an unbalanced 1/4" mono male jack (which advice I received from a previous post). Now I have two connections on the 1/4" jack, signal and gnd.
Where do these go to the 920 mic jack? Can I assume the following:

Radio shack mic 920 mic jack
---
signal mic
gnd mic gnd

Any response would be greatly appreciated.
Thanks !
Larry W.

Don't cloak yourself in fake mystery.

What are the implications?

They are:

ONE single message, EIGHT newsgroup flags attached to it.

I don't assume, these are unspeakable implications. Or did you really
believe, that a message posted to eight newsgroups criss crosses the
internet as EIGHT individual messages, consuming eight times the
bandwidth? The designers of internet had more brains than that.
Though you can read the message in eight groups, it only exists ONCE.

I have not been on 11m since 1974... but surely you are well acquianted
with it recently, Cecil.

Moi? CBer? And why, pray tell, would a CBer be staunchly defending ham
radio quality against the lowclass whiners such as yourself?

But you just cannot deal with reality, and are clearly losing it, as
proven by this incoherent rant, Cecil.

And btw... what is it about April 15, 2000 and linear time that you just
can't seem to grok?

Closed? One word. Reconsideration. Nuff said.

And since you and your pathetic ilk did not take the FCC as immutable
gospel before, why should I now?

Try and wrap your little pea brain around that one, if you can.

ROTFLU!

Could buy the thing from AES , serviced, guaranteed, with a money back trial period, for $1,200.

A while back I saw a Kenwood TM251 (2 meter mobile) go for $240 when you can buy the next generation TM261 for $179 -- why would any one pay $60 more for an outdated radio from who knows?

Just shows, your'e nuts to buy on e-bay and nuts not sell there.

The 261 is not the next generation 251. The 261 is the next generation
241.

The 251 is a different radio. It is a 2m radio with 440 RX and is worth
more than a 241 or 261 because of the 440 RX.

Sure!

Add a selector switch to the cable.
(It's very simple, just grounding the various channel elements.)
(You may have to add the jumpers in the radio too.)

Source record: 86788

Best source for parts...PC supplies. Plan on buying some extra toroids and caps for cleaning up the noise.

Take three of the same type...lift the earth grounds on two of the units, and make sure that the one that still has the earth ground is the one that gets plugged in first (I suggest using a power strip so that all three power on simultaneously).

Simply hook up the 5-volt supply leads in series, and pop a couple of big-ass diodes in line to regulate down to 13.6 volts or so.

That will leave the 12-volt outputs still available, and you can parallel them for another 20-30 amps or so. If you can find supplies with voltage adjustments, so much the better...turn the 5 volts down to 4.5, and crank the 12's up to 13.8.

Most of the supplies are pretty clean if you don't get them past 80% capacity or so.

On some units, you may need to tie +5 volts to the orange lead (power good) for the units to run. The diodes in the output will provide enough load to keep the supply in regulation.

Maybe I should write this up for one of the magazines, huh?

Apparently if they don't, the seller can list them as a problem
buyer, that info is then available to all to see. Will that deter most
people? Don't know.

3553. HF DF rig. Anyone know this model?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-31 00:00:00 UTC
From: "J.K. (John) Mroz" <jmroz@dfl.crc.ca>
Message-ID: <38965DEC.AE60D81B@dfl.crc.ca>
Source record: 86790

Hello everyone, January 31, 2000

I own a HF DF rig but can't locate info about it.
Service manual would be nice. Anything would be nice.
Please help. Your network may know about this rig.

Thanks,
73,
John VE3 EIE.

info----------

The faceplate says DIGITAL RADIO DIRECTION FINDER.

Made by: AQUA-MARINE MFG. LIMITED

Model: MARINER 3000

F range: Beacon 100-400 kHz
Broadcast 535-1635 kHz
Marine 1600-3900 kHz

The serial number is close to two million.

The rig says MADE IN JAPAN
and runs on 12 VDC direct
or on several C-size dry cells.

It is 12 by 12 by 3 inches (LWH)

It has a manually steered antenna and adjustable
360 degree ring on top. The antenna block is a
cylinder about 7 inches long by 2 inches round.

Also on top are:
a momentary SENSE button,
an extendable SENSE antenna,
a banana plug/screw terminal
for an external MARINE antenna,
a 1/4 inch mono jack
for an external GONIO antenna,
and a mini headphone jack.

On the faceplate it has (from left to right)
(top) an analog DF LEVEL TUNING METER
a digital FREQUENCY IN KHZ display
(bottom)an AM / SSB mode pushbutton
a switchable ANL switch

a switchable RADIO / DF switch
a two stage VOLUME / DF LEVEL dial
a three position BAND switch
a clarifier
a TUNING dial
a LIGHT pushbutton.

The back has two pull plugs that release the
hinged backing plate to expose the eight capacity
dry cell carrier and the 12 VDC input plug.

On the right is a nine inch long carry strap.

It was previously used on an ocean-going sailboat.
Condition is 10+ electrically and visually.

The seller also has no history, and the seller and the top 4 buyers all have
names and email that have the same "ring". Looks pretty fishy to me.

Larry,

I resorted to taking the Shure apart and tracing the wiring and using the Yaesu schematics to match it up. I am glad I did as the "advice" I received was way off.

I contacted Sure and they sent me a CD with ALL the data sheets on all of their mics. So there was an added bonus to this adventure.

I would try the same with your RS Mic and Yaesu.

Hi,
I just happen to have one still installed in my car. Looks and works fine. I've replaced it with a Yaesu FT-100 but just haven't pulled it yet. It has the extension cable, tone decode board plus the box and everything it came with. I'd say its worth $325 plus shipping.

Let me know if you're interested.

Thanks,
Jim McGhee N5FZT

Dave,

And is the achievement somehow "devalued" after April 15? Should any "post April 15th" Generals or Extras even try to feel any sense of pride at passing exams (even though from a VE I talked to, the exams WILL be harder)?? Why all the hub-bub over a word-per-minute CW requirement? What EXACTLY is your definition of a "Real Extra License", and how does banging out fast code make you special???

ve9hi@nbnet.nb.ca writes:
>Can anyone help with mod info for this fine little ht ?

I can't tell you *what* to modify; I have an R2 not a Q7. But I can
give you a hint that may avoid breaking something while taking apart
the radio. My suggested sequence of operations is:

- remove the batteries, antenna, knob
- remove the rear cover of the radio (2 screws inside battery compartment)
- unsolder 5 places on the RF board:
- lower left, approximately behind power switch
- upper left, between knob and phone jack
- upper right, all three solder connections to the SMA connector
- remove one screw from RF board, near FCN button
- lift RF board off connector (on control board) and remove from radio
- unsolder speaker wires
- remove nuts from rotary control shaft and SMA connector
- remove lower 2 screws on control board
- lift control board up and then out of the case

In particular, there are two different ways of removing the RF module.
You always have to remove the back of the radio, and remove one screw
in the RF module near the FCN button. You also have to desolder two
solder joints, one at the lower left of the RF board where a "finger"
extends up from the shield on the lower control board, and one at the
top of the RF board between the rotary control and the speaker/mic
jack.

At this point, you have a choice. You can *also* desolder the three
solder joints that connect the RF board to the SMA connector, and then
lift the RF board out of the radio leaving the SMA connector behind, or
you can leave the SMA connected to the RF board and remove the whole
assembly from the radio.

When I took apart my R2, I used the second approach because I had seen
it described on a web page. It does work, but there's some chance of
breaking the RF board in the process. The left side of the RF board
has a connector on its underside which plugs into a connector on the
control board, and so the left side of the board must be lifted up to
detach this connector. Meanwhile the SMA connector is pressed into a
metal frame that's soldered to the control board, and it requires quite
a bit of wiggling to get the sma connector out of this hole in the
metal frame. So you end up needing to tilt the RF board to free the
connector, then wiggle the SMA loose from its hole. In doing this, you
have to apply the force to the SMA connector itself from outside the
radio; you can't use the RF board as a "handle", even though it's

tempting, because the mechanical connection between the RF board and the SMA connector is just 3 solder blobs, and is limited by how strongly the copper foil sticks to the fiberglass board. There's a fair chance of permanently damaging the RF board in this step.

Later, someone pointed out the first alternative above - desoldering the SMA connector first. Once you do that, the RF board is free to be lifted off the connector to the control board without stressing anything, and the SMA connector remains pressed into the metal bracket where it will come out with the control board. Much safer, though it involves more desoldering and resoldering.

I hope this info helps someone avoid damaging their Q7.

Dave

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

The trouble is these damn connectors keep getting
smaller while I keep getting older. I'd just as soon
NOT have to solder DB9 connectors at all unless it
was an emergency repair.

More to the point, the
ability to solder is not at all an indication of technical
competency anyway.

Cheers,
Bill K2UNK

Alphabet rules? What do you think the [.- = A] are? As for syntax it
depends on what other language you are using morse to communicate in.

> I was under the impression that Mr. Morse spoke English and invented a
> *coding system* for the English language and it was originally

> you?

Irrelevant. It is still a language useable by non enlish speakers to
communicate at least the basics of a conversation with enlish speaking
hams, and vice versa.

> Morse code and Ohm's law are learned exactly the same way.

BS, Cecil.

> If you
> use it, you remember it. If you don't use it, you lose it.

Actually it is much like riding a bicycle. Once you learn it right you
never forget it... you might get rusty from non-use but the rust shakes
off fairly quickly.

I guess it is just becoming more and more apparent that Cecil just never
learned cw well and arrogantly brandishes his inabilities and the
ignorance they create as some kind of perverted 'virtues'.

> After 49 years as a ham, I am very practiced in the use of Ohm's law.

But clearly not in the use of cw.

> That is an *EXACT* description of what I'm doing when I receive Morse code.

Then you are unique in the universe, Cecil.

Because since cw is used for COMMUNICATION and part of the definition of COMMUNICATION is the exchange of ideas, I fail to see how one can consider the exchange of ideas between individuals, each exchange being completely different for the most part, to be 'repetition carried out mechanically'... ESPECIALLY 'unthinkingly'.

Maybe you operate morse on the 'infinite number of monkeys at an infinite number of typewriters for an infinite period of time recreating all the works of Shakespeare' model, but I do not think most people do...

and likely your random dits and dahs on the air would legitimately be considered interference under most definitions and result in your losing your license. (not that it would be much of a loss to the hobby apparently... you certainly come across as a 3870 kind of guy...)

> Code gurus tell us to, "Repeat the code over and over until you can do it
> without thinking about it".

It is not 'not thinking about' what is being sent... it is 'not thinking about' the mechanism of the communication.

It is the same as your french teacher telling you not to translate/convert but to actually think in the language naturally.

But clearly Cecil lacks the wit to comprehend ... maybe we should just pity him for his ignorance and mental limitations which he is so clearly demonstrating.... what do you all think?

Lessee... I work emergencies, public service communications, VHF nets, HF nets, organizing and teaching ham classes, organizing and running local VE testing, helping at the 7th call area QSL incoming Bureau, doing interference tracking and control, as well as contesting, DXing, phone patches, emergency communications into disaster sites, and scoring the occassional newspaper article for the hobby.

Oh no... I don't do anything to promote or support the hobby, now do I?

I feel I have put enough into this hobby to allow me to stand in defense of what I believe in, and if you do not like it well I guess that is just too damn bad, now ain't it?

Today I had the pleasure of really seeing why there is so much animosity between CB guys and Hams. Personally, I run both bands and have done my thing with the ham ticket and all. I visited with a fellow in Maine whose real name is Harry, but called himself Bruck. In the process of the discussion, I mentioned that I was running an old Antron for 10 meters and that it was an old CB antenna. Another fellow joined the conversation and we discussed the possibility of using PDL2's or Moonrakers for 10 meters. I have done both with grt success. In the meantime, old Bruck, got a perturbed over the 11 meter antenna discussion and got quite arrogant. I am just glad that most hams don't act like old Bruck from Maine or it would really be bad.

Two guys were sitting on a park bench. One turned to the other and
asked, "Are you a Liberal or a Conservative?"

"I'm a Conservative," the other man proudly replied.

"Why are you a Conservative?" the first man asked.

"Because my father was a Conservative, and so were my grandfather, my
great grandfather, and his father before him," replied the other man.

"What if your father was a jackass, and so were your grandfather, your
great grandfather, and his father before him?" persisted the first
man. "What would you be then?"

The first man thought for a moment, then replied, "A Liberal."

See that your satire is very good. The line between Ham & CB, has been very blurred in the last few years. I'm sure there are plenty of those guys like "Bruck" on the Ham bands, in fact I'm sure of it, I have talked with many.

Not Reagan... Bush... nowhere near a conservative and one who caved to
King Hussein's response to a whiner in the US.

Basically proof that Bush felt he could 'do something' to please a
foreign power that 'did not matter much'.

Well, it mattered to most hams!

That was one of Bush's blunders causing him infamy in my regard and the
regard of hundreds of thousands of others.

3601. WTB: Eimac SK-620A or Equal Tube Socket

Newsgroup: rec.radio.amateur.equipment
Date: 2000-01-31 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <389521b8.53171533@news.swbell.net>
Source record: 86870

Hello All,

I am looking for an Eimac SK-620A or equivelant tube socket.
This is the socket for the 4CX250/4X250/4X150 tubes.
This needs to have the built-in capacitors, that I guess neutralize
the tube.

If you have one to sell, please E-mail me or call me:

E-mail: radiotek@pacbell.net

Phone: (661) 272-6949

Thanks & 73,

Mike KQ6MU
http://magelectronics.8m.com

From: radiotek@pacbell.net
Message-ID: <38952211.53260099@news.swbell.net>
Source record: 86871

Hello All,

I am looking for a High Voltage power supply.
This power supply needs to supply the following:

+250v, 1000-2000v @ 300mA, and if possible 6.5v filament
voltage.

If I need to, I will build the power supply myself. So, if someone
has a transformer that will put out any of the above voltages or
all, please let me know.

Please E-mail me or call me.

E-mail: radiotek@pacbell.net

Phone: (661) 272-6949

Thanks & 73,

Mike KQ6MU

Now here is one person that makes sense all the testing and high speed
code requirements are nothing but nonsense. The only thing that should go
into making and amateur extrta is experience. and documented ability.Exactly
the way KO6JQ describes the way ..

However specifically with regard to to code test... My neighbor has a son
who is only
16 and can copy my code tapes at at least 20wpm..... now if he ever learns
to tie his
shoes and feed himself everyone will be proud... I found out he could copy
the code
when he asked me what word meant and he was spelling the callsigns from the
tape..
now I guess he is what mister DEATH (thanatos999) means is someone that
can be proud
to qualify for amateur extra... IF ONLY HE Didn't have downs syndrome..
If code was the be all and end all my friend would be a perfect extra how
as I sated before the
original concept of documented experience and personal recommendat6ion is
the only
reason I could accept for changing the restructure order from the fcc and
then only for amateur extra.

dear thanatos999 if it is so important to voice yor opnion why dont you
advertise your callsign ..

or are you struggling for that 5wpm yourself but dont want to admit it..

> KC2EBP

I'd have to agree that cb's aren't very good for this situation. I
question their ability to reach across any but the smallest towns, and
that's only with a large antenna. With a 4+ foot telescoping antenna,
maybe it's possible (enough to be reliable even) but that would be
harsh on his paintball, moutain biking, and disney world experiences.
And with both cb's having rubber ducky antennas, the range would
probably be equal or less than the frs! I had one once, wasn't
impressed, maybe they've gotten better, but I doubt it.
Plus handheld cb's are pretty useless indoors, due to their low
frequency and the fact that they are A.M., meaning they're much more
susceptible to interference.

I'd say no to the cb (for this purpose, not as a hobby).
Good luck

Any out there ever heard of Meissner Manufacturing Company?

I have a Meissner "How to Build" Instruction Manual.

Cover says:

Fully illustrated with charts, radio formulae, schematic circuit
diagrams and pictorial wiring diagrams.

also

Containing complete constructional data on Meissner kits for building
fine home and amateur receivers and adapter units.

A complete outline of frequency modulation theory

Operating instructions and service data on 13 complete assemblies
including FM receivers, phono-recorder, servicing and amateur equipment

Useful coil design and circuit application data for the serviceman and
experimenter.

Price Fifty Cents [smaller print under] seventy-five cents in Canada

Ideal for beginners, advanced students and instructors

As you travel through various areas, seek out those who like to communicate via NVIS.

Near Vertical Incident Skywave - 80 or 40, depending on MUF each day/night. 50 watts, SSB, 20 feet of antenna strung out horizontally, no specific height required but with best ground available.

Heck, put the wire on top of 2-foot high orange cones. Orange surveyor tape tied to wire between cones to warn people away.

Good for crystal-clear communications up to 300 mile radius from your site regardless of terrain.

Be able to talk to people in your immediate area or those left behind from that day's travel; establish a sked for the following evening. Possibilities are almost limitless.

HA, that book probably covered all of about a dozen PNP transistors the highest powered of which might have put out about 250 mW audio. I don't even have anything that far back.

Good nostalgia book though.

Hello!

As a result of my research for IC-10 interface chips (used in the
TS-440S and other Kenwood models), I have ended with some extra sets of
chips (I needed to order a minimum of them). The chips are the 8251A
UART and the CD4040. If anybody is interested in them, just let me know.

Best regards,

JOSE

>How does your S-meter work? Mine was completely dead, so I returned it.

Well, meter works, but is awful stingy on receive - goes up to about a 5 or so and thats it, I've listened in on the FM repeaters and have gotten a higher reading, but even when I talk to local stations, meter wouldn't go above a S-5 on SSB. I can usually tell by how strong the signal sounds approximately what the signal strengh is. Or, I flip on my Yaesu FT101Z and check on it (but its just the opposite - very generous meter <G>) But, the HTX-10 is and excellent little radio for what it was intended for. I've emailed RS and asked them if they can come up with a "Matching" 6 meter rig for about the same price. Would look nice in my shack <G>.

Hi folks, I am looking for some old electronic musical instruments and related accessories from the 1960's -1990. I prefer instruments with lots of knobs or slider controls but will consider anything. BROKEN OR PARTS OK.

SYNTHESIZERS (eg. Moog, Korg, ARP, Roland, Sequential, Oberheim, etc)
KEYBOARDS
SEQUENCERS (anything with knobs or sliders for each step)
VOCODERS (robot voice effect, keyboard or rack)
MIDI MODULES
EFFECTS PROCESSORS (Mutron, Maestro, tape echos, filters, etc)
ANY OLD PATCHABLE MODULAR OR ANALOG SYNTH

Please email me privately if you have anything youd consider getting rid of or know someone who might. Be sure to include price, condition and location. Thanks for your time and have a nice day!

Examples of things I am looking for but definitely NOT limited to:
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Voyetra Eight polyphonic synthesizer module
Integrated Kyboard Wavemaker 4 or 6
Oscar with or without MIDI
PPG Wave 2.3
Studio Electronix P-Five Pro-5 analog rack module
Morenz-Perkes 1200

and lots of other stuff...

Sent via Deja.com http://www.deja.com/

>

To be honest, they seem to be making a good-faith effort to remedy the reputation behind their name. I recently plunked down $4.95 for the radioshack.com commercial catalog at the local Rat Shack store, and I have to admit I'm impressed. The catalog still doesn't have the sheer depth of DigiKey or Newark, but it does represent a vastly-expanded selection of goodies compared to the normal RS store catalog. And the product descriptions are well-written and informative, with almost everything photographed.

It is an ideal companion to the radioshack.com web site IMHO. Browse the commercial catalog, type in the desired stock # on the site, and your order shows up the next day, with no need to deal with officious salesdroids or half-stocked shelves.

I am surprised the brick-and-mortar RS stores are putting these commercial catalogs on their shelves. The quality of the latest release of the radioshack.com catalog/web site is enough to eliminate 9 out of 10 of the RS store visits I typically make in the course of a year. The B&M guys can't be too happy about that.

3633. LOOKING for Shipping Company for Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-01 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <38975fd2.27338798@news.swbell.net>
Source record: 86652

Hello All,

I am looking for a shipping company that will ship a Ham Radio Antenna
from Texas to Southern California.

My cheapest price quote was $220.00!!!! WOWSERS!
That is way too much for the antenna. The shipping will cost more than
the antenna.

The deminions are: 12/13 ft x 12" x 12"
Weight- 40 Lbs.
Density is 3 lbs. per Cubic Foot
Class: 300

UPS & USPS will NOT accept anything over 108", so that is a bummer.
I was told that we could only use a trucking company to get the
antenna over here. It is a 4-Bay Dipole Array for 2m. I would think
that it would be cheaper to drive over there and pick it up ourselves
for the prices I received! $220-280!!!

Any help would be greatly appreciated. Please E-mail me.

E-mail: radiotek@pacbell.net

Thank You & 73,

Mike KQ6MU

Anyone have detailed specs for this little radio? I have
the radio here but the manual doesn't have much. Especially
interested in battery capacity. On a small satellite team
here and we are considering the little thing as the guts of
our communications unit for linking to earth. Anyone have a
service manual? Does that have more detailed specs?

Does anyone have a good course for children to get their no-code exam? My son and his friends have a keen interest to get their license (ages 9-14), I tried teaching them but I can't do it -- I keep assuming that they know things a priori and they get frustrated.

There are lots out there that have taught age groups like that. Please let me help this next generation jump in!

thanks

CherryHalls <cherryhalls@aol.com> hath said:
: Does anyone know of anywhere to get a schematic for this radio, seems Kenwood
: is not shipping the schematics with their radios any longer......
: 73
: Deb

I haven't seen any type of service information on a Kenwood radio
in a long time. My TS-450, TM-V7A, TM-241, TM-251, and TH-G71A
never came with a Service Manual, only the Owners Manual.

The only thing Kenwood is including is an Owners Manual which shows
how to operate the radio. If you want a Service Manual you have to
order one seperately. Kenwood dooesn't expect you or me to be doing
work to these super-microchip surface mounted parts. But if you want
one you can order one from their service parts center.

Pacific Coast Parts (PACPARTS) http://www.pacparts.com
You can order just about any repleacement part for your new or old
Kenwood radio. Including Owners and Service Manuals. Simply login
as a guest and choose Kenwood from the list of manufactures then you
choose either the part number (if known) or select model of radio for
a list of parts they have. They also claim if its not their they can
GET IT if you explain what it is. So far I've not had any problem
finding and ordering (by telephone) from them. Good turn-around.

Keep in mind most, if not all, shortwave radios nowadays have output jacks for an external speaker. Which means you can connect your radio to the standard "communications" speaker, or you can plug the radio into the accessory input jack of any stereo system or boombox.

From: KC2DLA Paul <kpaul@usa.net>
Message-ID: <8785ggjc1@bob.news.rcn.net>
Source record: 86662

Hello group,
I have a Kenwood TS-520 and a Cushcraft R-7000+ vertical trap antenna. I have an S8 "buzz" on 40 meters. This buzz is constant throughout the band, and peaks its signal around every 20khz. On the peaks, it interferes strongly with CW reception, and pulses out most signals. I have noticed the buzz on 80 and 15 too, just not as pronounced. On 80, there are less noticable peaks, and the recieved signals dominate over the buzz. On fifteen, you can't really tell unless you are listening for a problem. From what I understand, this could be power line noise from the pole. I hav switched off computers, unplugged a stereo, and the fridge, but the buzz persists. Also, this is 9:00 at night on the lower bands. I have not been around to listen during the day, although I realize this would be a good idea to totaly diagnose what is happening. If it is power line noise, what should I do first. I am really open to anyones opinion who has had this kind of problem. Should I get a plug-in filter, or call the company, or trace it to a pole? I would appreciate any help in the matter. Reply to the group or my email kpaul@usa.net

Thanks! de Paul, KC2DLA

Not to belittle CW or what you said, but I use common CW abbreviations
while carrying on foreign PACTOR QSOs. They can be a useful part
of any digital mode QSO, including CW.

Problem with most speaker/earphone outputs is that the chip that drives
them usually offers 10% distortion at rated power. Hardly mo-fi much
less hi-fi.

Best bet is to find a receiver with line output or delve into one and
pick off the signal prior to the driver stage to the volume control.
Feed signal to the pre-amp of your system.

It was my first dual bander and excellent in all respects except one and
that one exception made it unuseable to me. It will not do dual in band
receive and I find that function absolutely necessary. I don't do a lot
with 440 and I like to monitor a 2 meter simplex freq on one side and scan
all the 2 meter repeaters on the other side. Sometimes I scan the two meter
simplex freqs on one side and the two meter repeaters on the other side.
Cannot do this with the 2350 also cannot switch memories from one side to
the other. I went to the IC 2710 where you can do this and am much happier.
Oddly, the new and quite expensive IC 2800 does not have dual in band
receive either. If that feature is not important to you as it is to me,
then it is a quite excellent radio and very trouble free.

Howdy, folks.

New site! http://cw.hfradio.org - CW / Morse Code Resrouce center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

Also, if you are into HF, consider getting onto 10 meters! It is hot right now. Lots of DX. The Ten Ten International club is challenging Amateurs to work 2000 contacts on 10 meters, any mode, any 10 meter frequency, in the year 2000. I've posted my current 10 meter logs on the site. See if you are in there (if ya worked me!).

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

Well, maybe that's right, and then maybe not. Soldering is a skill of dexterity and timing, but also a result of proper instruction in technique. Lacking such skill, one may still understand all sorts of things, and be able to explain, repair, adjust, operate, modify, and even design the kitchen sink etc. It's just that soldering is so *basic* a skill for a ham, and so easy to learn and do competently well, that barring arthritis and astigmatism it is hard to understand why a ham can't do it, or how he *can* be competent in performing more complex tasks, like using an oscilloscope, setting up a field day station, or building and installing common antennas.

Which is exactly the argument being made, but as inverse: the skill is simple and common and undemanding. However, given that soldering is a staple (no pun intended) activity of amateurs who are more than purely appliance operators, lacking minimal competence in it raises questions about other basic skills, higher order skills, and the quality and extent of the self-training we are supposed to be engaged in.

Good proof of the axiom that both are bankrupt, corrupt ideologies that have everything to do with imposing oneself on others, and nothing to do with morality, truth, or efficacy. Both of them stink.

Not only that, but if you are using a news reader much more modern than
TIN, reading a message in one group should mark it as read in the others
as well, so you don't see it twice, unless you want to torture yourself
with everything that everyone else is doing wrong.

It is *not* a language, it is a coding scheme, like ASCII, memorising CW codes from ham radio has about the same relevance as memorising ASCII has for computer operators. I'm an old timer in computer programming, when I studied it I had to enter a program on the front panel switches of a PDP-11, it made some sense then, but it would be silly to have that as a requirement now.

Ham radio must change, the internet is available, free in many places, it does not require a license, you can talk to people around the world. Most hams today don't want to listen to cw, so even with thousands of new American Extras, you'll still have those cw bands to yourself, but don't stand in the way of those who want to try other, more cutting edge modes!

3676. HAMCOMM and the 741 op-amp cable

Hi folks:

I have a version of HAMCOMM. I bought a cable to attach to a serial port and it goes to the
speaker jack on my receiver. Being new to this setup, I have failed to receive any readable stuff. What am I doing wrong?

I have a RS DX-390. I am using an IBM PS/2 57 as a dedicated terminal. I tried to tune in the signal and received nothing but random characters.

Subject: A Theory - STOP THE BAIT AND SWITCH SCHEME!

Friends, Romans, Countrymen,

LEND ME YOUR FISTS!

My friends N8WGM and N4SKD may have solved the mystery of the sudden restructuring to become effective on April 15th. It may not be only about Kenwood or Icom wanting to sell Ham rigs in CB-boom quantities. Big business wants frequencies and the Feds want to sell our God-given Spectrum for filthy lucre and as a bonus to keep the people from having direct access without a government or corporate gatekeeper.

As the new theory goes, the FCC only has unilateral control (eminent domain) over domestic spectrum, namely the VHF/UHF bands, while the HF bands are ruled by international treaties. The quickest bucks come from selling VHF/UHF. These frequencies are also the most useful for business mobile communications. The fly in the ointment for the greedy bureaucrats is the occupation of many of the available bands by large numbers of Technician and Novice Hams. These no-code or little-code Hams are a majority. The ever resourceful parasites in high places were presented with a serious problem, how to move them off the VHF/UHF bands without starting an insurrection. The answer, GIVE THEM INSTANT ACCESS TO HF so that when the plug is pulled on ever increasing slices of VHF/UHF they won't have as much reason to gripe. This is the oldest trick in the book, like giving displaced employees of companies moving offshore the "option" to move to a different division or shuffling Native Americans to smaller and smaller reservations with promises of better hunting grounds.

Who fought to maintain the portions of the VHF/UHF bands already ceded to big brother and big business? Were the General, Advanced and Extra-class Hams as dedicated to saving the 220 MHz band as the Techs? The non-HF Hams fought gallantly but in vain. Most HF Hams didn't seem to care very much. That lesson didn't go over the heads of our "friends " in government or the ARRL. Those cynics know that while the novelty of HF has most new full-spectrum Hams diverted, the VHF and UHF portions will be fair game. The Feds will pull it off like a Mommy offering a baby a lollipop to distract him while she takes away a shiny but oh so dangerous razor blade. Didn't you know that we

are all supposed to be too irresponsible to "play" with our own spectrum?

The no-code Hams are crowing today, but they may come to see their victory as
hollow. We will be all crowded like sardines onto the "reservation" of HF while some of the most valuable VHF/UHF turf is lost forever. SUCKERS! Had these no-coders simply done the work to achieve proficiency in code speed they could have had their cake and eaten it too! Now they will loose what they had and foul what they gain.

Let us all join together for one last thrust against this dirty scheme. Attached is a communication from a friend and avid CW operator. He has provided links to a site with a downloadable petition and links to interested
officials. We have until the middle of February to register our opposition to the restructuring. WRITE AND SHOUT FOR YOUR RADIO LIVES!

73's,
AL PARKER,

Anyone know who might program these radios? Web Addresses and anywhere
in California would be great.

wall paper. Years later I renewed it. It was now a yellow
cheap document. Years later, I renewed it again. It had now
become a wallet sized card good for life. I pretty much see
amateur radio going down the same path. When I got my first
ham license, you had to send and receive and draw schematics.
Heck, I think that you even had to have good moral character!

Source record: 86728

Hi Butch,

The DSP-100 is designed to enhance the audio quality of SSB. And it achieves this particular task very well... but, I'm sorry to say, very few amateurs ever took the time to "discover" this enhancement!

This unit contributes absolutely nothing towards improved IF filtering on receive, nor does it perform any of the noise reduction features so many were expecting when they purchased the DSP-100!

Kenwood did an absolutely lousy job in promoting this unit. It performed its design objectives (high audio quality) very well; but Kenwood's advertising made not the slightest gesture to dispel the general expectations of amateurs that its purpose was noise reduction (a quite natural expectation since up to this point this is what amateurs "thought" DSP was all about). In actuality, the DSP-100 generates and demodulates SSB using techniques similar to the phasing rigs of many years ago --- but achieves the results through digital processing.

Regards,

Keith (KS9C)

I just got through wading through all the restructuring comments.--I think I have probably been around many years longer than most of you abd I can make a few observations. The FCC has acted--it did not listen to ARRL, Fred Maia, or many others--it did listen to QCWA. But no matter, it is over and it is what we have to live with--and the guy that was complaining about dems and repubs--that is inane--national politics has very little to o with amateujr radio--I should know because I spent a great deal of time in Washington. (DC) dealing with the bandits down there. The only time the pols are going to get into the act is when your neihbor has TVI--then we have troubles
